COL. WALTER A. WOOD, Arctic Institute of North America, New
York, N. Y.

FOREWORD

The task of analysing and indexing the scientific literature on the Arctic, begun in 1947 by the Arctic Institute of North America for the Department of Defense, has continued with the preparation of Volume 6 of *Arctic Bibliography*. This volume represents the work of the fiscal year 1955, which like that of the preceding fiscal year, has been supported by the Air Research and Development Command, Department of the Air Force. As in the past the work has been carried out under an Office of Naval Research contract.

From the beginning of the project the aim has been to include in each year's volume as many current or recent items as possible, while at the same time working to reduce the backlog of older materials not previously analyzed. By following this plan, the project after a certain number of years should be on a current basis. Coverage of the more important older materials is by no means complete, but each year marks an advance, and the present volume illustrates the trend—an increase in the number of recent publications processed, and a decrease in those of earlier years. Approximately 1,560 items analyzed in Volume 6 were published in 1954, 1,490 from 1950–53, 760 from 1940–49, 840 from 1920–39, 380 from 1900–19, 248 from 1800–1899, and 7 pre-19th century.

The present volume summarizes the contents of 5,285 publications, which are listed alphabetically by author and numbered consecutively from 33,126 through 38,410. Subjects emphasized in this volume, and represented by 800 or more items each, are geology and mineral resources; geography; zoology; medicine and physiology, especially effects of low temperatures. Other subject fields and the approximate number of items are: engineering (navigation, aeronautics, construction, transportation), 500;

botany, agriculture and forestry, 400; meteorology, oceanography, 300; anthropology and sociology, 600; exploration (especially Russian expansion in the North Pacific), 300.

The language coverage is essentially the same as in earlier volumes. 3,255 of the publications listed are in English, 1,215 in Russian, 350 in German, 176 in French, 90 in Scandinavian, 86 in Italian, 39 in Japanese, and 74 in ten other languages.

The Directing Committee and Editor again wish to thank the Librarian of Congress for generous cooperation in providing working space for the project. We are likewise indebted to Dr. Burton W. Adkinson and Mr. Robert C. Gooch, Directors respectively of the Library's Reference and Administrative Departments, and members of the Directing Committee since 1947, whose advice and assistance have contributed greatly to the success of the work. We wish also to express our appreciation to the representatives of the military agencies, Dr. Paul Siple, Dr. Sidney R. Galler, Dr. A. H. Lawton, Mr. George Grimminger, and Col. C. C. Cain, whose continued interest and support have made this work possible.

Henry B. Collins
Chairman, Directing Committee
Arctic Bibliography

INTRODUCTION

Research and development in the Arctic and sub-Arctic reported in 1954 is impressive. Iron mines in hitherto inaccessible Labrador went into production and export; a major hydro-electric power project is planned on the Taiya River in Southeast Alaska; a pulp mill began operations at Ketchikan on the edge of the Tongass National Forest; a new Canadian ice-breaker navigated the Northeast Passage; the Scandinavian Airlines System initiated trans-arctic commercial flights with European and Pacific termini. These are forerunners, it is anticipated, of larger developments. They follow, as they foster, exploration and scientific investigations of the area, its conditions and resources. Among such studies described in the present volume of *Arctic Bibliography* are those of the recently established International Commission for the North Atlantic Fisheries, bathymetric work of the Beaufort Sea expeditions, continued investigation of the ice islands, studies of the California University Arctic meteorological research group, studies at the Arctic Research Laboratory, Point Barrow, under auspices of the Office of Naval Research, Canadian permafrost investigations at Norman Wells and Aklavik, work at the Canadian Defence Research Northern Laboratory at Fort Churchill, and through nearly fifty years, the U. S. Geological Survey's bulletins on the mineral resources of Alaska.

Laboratory studies on human and animal reaction to low temperature, on acclimatization but especially on deep hypothermia have considerably deepened our notions on man's capacity to withstand and adapt himself to cold environment. This knowledge will show its practical aspects in selection and adaptation of the human element needed for the development of the North. Study of the psychological effects of the Arctic on man

belongs to the same category, and its published results as well, have been systematically surveyed for this volume.

Russian publications of 1954 include accounts, unusually numerous and graphic in character, of three main arctic undertakings: the High Latitude Expedition (Vysokoshirotnaia ékspeditsiia) and its drifting stations "North Pole-3" and "North Pole-4;" investigation of the submarine ridge, named Lomonosov, extending across the Arctic Basin between the New Siberian Islands and Ellesmere Island; and study of the origin and drift of ice islands, and their historic role in exploration of the Russian seas. Earlier Russian activities are represented in this volume by major accounts of the Bering expeditions, and those of Billings, Golovnin and Vrangél,' also the rare narrative of Maak and Pavlovskii's Siberian travels.

Significant of the importance attached to the development of the North are recent administrative changes in major areas: the abolition of Greenland's colonial status, the organization of the Department of Northern Affairs and Natural Resources in Canada, and of Magadanskaya Oblast' as one of the six new jurisdictions in the U. S. S. R.

The *Arctic Bibliography* attempts to link these diverse activities in a common record of publications. In scope and arrangement the present volume is similar to the previous five. In its index, however, titles of all publications are given in English and the language of their text indicated by a symbol, D for Danish, F for French, G for German, etc.

Special work on ornithology was made possible by aid from Mr. Tom Cade. Thanks are given for contributions from the American Meteorological Society's *Meteorological Abstracts and Bibliography*, the Geological Society of America's *Bibliography and Index of Geology Exclusive of North America*, and from the Library of Congress' SIPRE Bibliography Project sponsored by the U. S. Army Corps of Engineers' Snow, Ice and Permafrost Research Establishment.

ARCTIC BIBLIOGRAPHY

33126. A., M. Petsamo. (Deutsche Wehr, Feb. 1943. 47 Jahrg. no. 7, p. 93-95, illus., map) Text in German. *Title tr.:* Pechenga.

Contains notes on the Pechenga region when it was in possession of Finland: its situation, boundaries, area (10,470 sq. km.); the tundra climate mitigated by the influence of the Gulf Stream; the political history till the Soviet-Finnish peace treaty, 1940; the population, 3,750 in 1937: 2,700 Finns, 450 Lapps, 400 Karelians and 200 Russians; difficulties of transportation and importance of the so-called Arctic Sea Road from Rovaniemi to Liinahamari, the harbor of Pechenga; the natural resources of the region, especially the nickel-ore deposits at Koslojoki (now Nikel?) and their exploitation. The significance of the region for Finland, also that of the Rybachiy Peninsula, and cession of the latter's Finnish part to the U.S.S.R. in 1940, are mentioned.

Copy seen: DLC.

33127. A., M. Poljarnoje. (Deutsche Wehr, Apr. 1943. 47 Jahrg. no. 17, p. 230-32.) Text in German. *Title tr.:* Polyarnoye.

Contains notes on the strategic significance of the Soviet naval base at the entrance to Kola Bay, the port of Murmansk, the northernmost in the U.S.S.R., developed greatly after the construction of the Murmansk railway and White Sea-Baltic Canal. To protect this new center of industry and commerce, the military installations at Polyarnoye (former Aleksandrovsk) were built up, and in 1937, 25 torpedo boats and 15 submarines were alleged to be stationed in this harbor. Its natural situation makes it an almost invulnerable base, and a menace to Finland, Norway and Sweden, also to the sea lanes of the North Atlantic. Its weak point is its relative isolation from large centers of Soviet industry

and exposed geographical location. The part played by Murmansk and Polyarnoye in World War II and their bombing by German aircraft are briefly mentioned.

ÅBERG, EWERT, *see* International Botanical Congress. 7th, Stockholm, 1950. Proceedings. . . 1953. No. 35382.

ABBOTT, J. W., *see* Canada. Experimental Farms Service. Dominion Experimental Substation, Whitehorse . . . progress report, 1945-52. 1954. No. 33885.

33128. ABERLE, DAVID F. "Arctic hysteria" and latak in Mongolia. (New York Academy of Sciences. Transactions, May 1952. v. 14, no. 7, p. 291-97.) Attempt is made "to show that a mental abnormality found in several Mongol groups is identical with Malayan latak, one form of so-called 'arctic hysteria,' a North African condition, and the 'jumping disease' of Maine. The identity of these conditions is used to criticize some theories of the cause of the disease."— p. 291. Based on research for the Mongol Project of the Walter Hines Page School of International Relations, Johns Hopkins University.

ABHYANKAR, R. N., *see* Rahman, S. A., and others. Effect of cooling the anterior chest wall. . . 1954. No. 36964.

33129. ABRAMOV, B. Ënergiâ velikh rek. (Novyi mir, Aug. 1954. god 30, no. 8, p. 183-94.) Text in Russian. *Title tr.:* The energy of the great rivers.

Popular notes on hydrotechnics and on utilization of water power in the U.S.S.R. The potential power resources of Siberian rivers (Lena, Ob', Yenisey, Angara) are noted, also (p. 189-90) the Angara hydro-electric power plant under construction. *Copy seen:* DLC.

33130. ABRAMOV, V. Adaptivnye priznaki molodi tikhookeanskikh lososel roda *Oncorhynchus*. (Akademiia nauk SSSR. Doklady 1949. nov. seriia, t. 67, no. 2, p. 393-96.) Text in Russian. **Title tr.:** Adaptive characteristics of the fry of the Pacific salmon of the genus *Oncorhynchus*.

Contains the results of a growth study of the fry of *Oncorhynchus gorbusha*, *O. keta*, *O. nerka*, *O. kisutch*, *O. tshawytscha* and *O. masu* in the rivers of Kamchatka Peninsula where the salmon comes for spawning. The salmon larvae live at first on the bottom and feed on benthos organisms, their coloring is spotty; the next stage of their development is pelagic, they change their coloring and start to feed on plankton; the optimum environmental conditions are: clean gravelly bottom and clean, transparent water with a certain rate of flow.

Copy seen: DLC; MH.

33131. ABRAMOV, V. Prispособitel'nye priznaki vzroslykh lososel roda *Oncorhynchus* v presnykh vodakh. (Zoologicheskii zhurnal, Nov.-Dec. 1953. t. 32, vyp. 6, p. 1198-1210) 14 refs. Text in Russian. **Title tr.:** Adaptive characteristics of mature salmon of the genus *Oncorhynchus* in fresh waters.

Contains a study of the changes in morphology, physiology and coloring of salmonoid fishes of the genus *Oncorhynchus* during the spawning migration, with 10 tables of data relating to morphology and coloring of keta and humpback salmon in various northern Asian rivers, including the Bol'shaya and Bannaya Rivers of Kamchatka Peninsula. Other details of spawning migration such as the speed, composition of the benthos population of spawning grounds, the enemies of fishes, etc. are discussed. All changes in the spawning period are considered adaptive and necessary for the preservation of the species.

33132. ABS, OTTO AUGUST HANS, 1891- . Aus der Polarmedizin, 1. (Medizinische Welt, Dec. 15, 1951, Jahrg. 20, Nr. 50, p. 1572-75.) Text in German. **Title tr.:** Polar medicine, 1.

Contains account of a lecture on the possibilities of physiological and psychological acclimatization of the white man

in the sub-Arctic and Arctic, with sections on the effects of darkness and the causes of "polar anemia;" the effects of absence or presence of women, of lack of social distractions, entertainment, etc.; the causes of fear, depression, "arctic hysteria;" psychic effects of environment via the endocrine system, etc.

Copy seen: DSG.

33133. ABS, OTTO AUGUST HANS, 1891- . Aus der Polarmedizin, 2. (Medizinische Welt, Dec. 22, 1951, Jahrg. 20, Nr. 51-52, p. 1607-1609.) Text in German. **Title tr.:** Polar medicine, 2.

Contains information on the problem of ozone and "Aran" in the Arctic, vitamins and hypervitaminosis A, trichinosis, scarcity of microbes in the air, infectious skin diseases, "spekk finger", etc.

Copy seen: NNC-M.

33134. ABS, OTTO AUGUST HANS, 1891- . Kälteschädigungen auf Polar-expeditionen. (Polarforschung, 1953, pub. 1954. Bd. 3, Heft 1-2, Jahrg. 23, p. 219-33.) Text in German. **Title tr.:** Cold injuries on polar expeditions.

Contains a concise account of the causes and nature of cold injuries; prophylaxis: medical examinations preceding expeditions, proper food, clothing and medicines, personal hygiene, psychological preparedness, etc., local frostbite, its therapy and complications; general frostbite and its treatment; hypothermia of the respiratory organs ("lung chill") and its prevention, therapy.

Copy seen: DLC.

33135. ACCORNERO, SIDI RAOUL. Sulla terapia del congelamenti con particolare riguardo agliestratti di larve di mosca. (Accademia Medica di Genova. Bollettino, June 1942. anno 57, p. 280-95, illus.) 14 refs. Text in Italian. **Title tr.:** The treatment of frostbite with particulare regard to fly larvae extract.

Contains an account of frostbite therapy especially as practiced in Italy; the topical application of cream containing extract from larvae of the fly *Lucilla sericata*, its curative effects, presentation of cases.

Copy seen: DSG.

ACKERT, J. E., see Freeman, A. E., and J. E. Ackert. *Metorchis albidus*. 1937. No. 34761.

33136. ADAM, LEONHARD, 1891- . Nordwestamerikanische Indianerkunst.

Berlin, E. Wasmuth, [1923]. 44 p. illus., 48 plates. (Orbis pictus, Bd. 17) 10 refs. Text in German. *Title tr.*: Northwest American Indian art.

A monograph on the art of Haida, Tlingit, Tsimshian and Kwakiutl Indians, based on collections of the Museum für Völkerkunde in Berlin and on the literature, with tribute to F. Boas' principles for the understanding of primitive art. Drawings and ornamental designs, stylized and realistic forms of plastic art are presented and analyzed. More than a hundred examples, mainly collected by Capt. J. A. Jacobsen in 1881-83, are illustrated with excellent photographs and descriptive notes. The spiritual and social backgrounds of this art are discussed with emphasis upon the influence of totemistic conceptions.

Copy seen: DLC.

33137. ADAM, LEONHARD, 1891- . Potlatch; eine ethnologisch-rechtswissenschaftliche Betrachtung. (In: Festschrift Eduard Seler. Stuttgart, 1922. p. 27-45) 4 refs. Text in German. *Title tr.*: Potlatch; an ethnological-juridical consideration.

Contains discussion of the origin and meaning of potlatch ceremonies among the Tlingit, Haida, and Kwakiutl Indians. Potlatching in its present form, it is concluded, represents a relatively young institution, based on accumulation of considerable wealth. The presents distributed at a potlatch are required usually in doubled amounts, hence it is a profitable loan institution. The seemingly senseless destruction and burning of property at the potlatch for a deceased person, killing of his slaves, etc., are probably based on cult and fear of the dead: his property cannot be used by anybody else, and the dead man needs it in his other life.

Copy seen: DLC.

33138. ADAM, LEONHARD, 1891- . Stammesorganisation und Häuptlingstum der Haida und Tsimshian. (Zeitschrift für vergleichende Rechtswissenschaft, 1913. Bd. 30, Heft 1-2, p. 161-268) 19 refs. Text in German. *Title tr.*: Tribal organization and chieftainship among the Haida and Tsimshian.

A study based on the literature on social organization of the Northwest Coast Indians. Their clans, sibs and classes, the totemistic character of clans and their crests, the role of the hereditary

chieftain, his power, functions and privileges are outlined. The origin and development of tribal organization is discussed, and relation with totemism considered. The migration of Haidas and Tsimshians to Alaska is noted, and the mutual cultural affiliations between Haidas, Tsimshians and Tlingits are outlined.

Copy seen: DLC.

33139. ADAM, LEONHARD, 1891- . Stammesorganisation und Häuptlingstum der Tlinkitindianer Nordwestamerikas. (Zeitschrift für vergleichende Rechtswissenschaft, 1913. Bd. 29, Heft 1-2, p. 86-120.) Text in German. *Title tr.*: Tribal organization and chieftainship among the Tlingit Indians of northwest America.

Contains an analysis of tribal and social divisions of the Tlingits, their phratries and clans, the role of the rich who form a "class of nobility," and the functions of a chieftain. Village, clan, and sib chieftains are found, the last being the most important. The chieftain fulfills also certain religious functions. J. R. Swanton's attempt to explain exogamy and the dual class system is also discussed.

Copy seen: DLC.

33140. ADAMOV, ARKADIĬ. Na vos-tok ot Kamchatki. (Vokrug sveta, July 1953, no. 7, p. 38-44, illus. map.) Text in Russian. *Title tr.*: East of Kamchatka.

Popular description of Stepan Glotov's discovery of the Fox Islands (eastern Aleutians) during the expedition on the *Sv. Iulian*, 1758-1762, his voyage in 1764-1766 to Kodiak Island, and Andreĭan Tolstykh's discovery of the Andreanof Islands on his expedition on the *Andreĭan i Natal'ia*, 1760-1764. The ships' construction and equipment, the explorers' hardships, and their relations with the Aleuts are noted. Tribute is paid to Glotov for his daring courage, and to Tolstykh for his thoroughness as an investigator; the two are compared.

Copy seen: DLC.

33141. ADAMS, ARTHUR. Descriptions of two new genera and several new species of Mollusca from the collections of Hugh Cuming, Esq. (Zoological Society of London. Proceedings, 1855. pt. 23, p. 119-24.)

Contains descriptions of 21 molluscs (19 described as new) from various seas. *Bela arctica*, native to arctic seas, is included.

Copy seen: DSI; MH-Z.

ADAMS, EDWARD, 1824-1856, see Bean, T. H. Adams's notes on the birds of Alaska. 1879. No. 33493.

ADAMS, EDWARD, 1824-1856, see also Gray, G. R. Description of a new species of diver. 1859. No. 34979.

ADAMS, EDWARD, 1824-1856, see also Gray, G. R. On *Somateria* & *Lampronetta*. 1856. No. 34980.

33142. ADAMS, JOHN, 1872-, and others. A bibliography of Canadian plant geography. Toronto, University of Toronto Press. 1928-1947; Ottawa, King's printer, 1951- in progress. 9 pt.

The bibliography deals with Canada and Alaska in pt. 1-5, and includes also Greenland in pt. 6-9. References are listed alphabetically by author. Subject and geographic indexes to pt. 1-7 were published in pt. 7, and each subsequent part has such indexes. An attempt is made to include any paper that makes specific mention of the occurrence of a plant within the geographic area, or that deals with phytogeographic problems in the area. Certain publications in the fields of travel, horticulture, physiology, morphology, or plant pathology are included if considered valuable to students of Canadian flora. The parts so far published are listed below under the authors' names:

Pt. 1-3. Adams, J. A bibliography of Canadian plant geography to the end of the year 1920. Entries 1-2412. (Royal Canadian Institute, Transactions, 1928, v. 16, no. 2, p. 293-355; 1929, v. 17, no. 1, p. 103-145; 1930, v. 17, no. 2, p. 227-65)

Pt. 4. Adams, J. A bibliography . . . 1921-1925. Entries 2413-2765. (Royal Canadian Institute, Transactions, 1930, v. 17, no. 2, p. 267-95)

Pt. 5. Adams, J., and M. H. Norwell. A bibliography . . . 1926-1930. Entries 2766-3104. (Royal Canadian Institute, Transactions, 1932, v. 18, no. 2, p. 343-73)

Pt. 6. Adams, J., and M. H. Norwell. A bibliography . . . 1931-1935, with an appendix on the flora of Greenland. Entries 3105-3399; Greenland 1-197. (Royal Canadian Institute, Transactions, 1936, v. 21, no. 1, p. 95-134)

Pt. 7. Senn, H. A. A bibliography . . . Additions, author, geographic and subject indices for the period 1635-1935. Entries 3400-3562. (Royal Canadian Institute, Transactions, 1946, v. 26, no. 1, p. 9-151)

Pt. 8. Senn, H. A. A bibliography . . . 1936-1940. Entries 3563-4384. (Royal Canadian Institute, Transactions, 1947, v. 26, no. 2, p. 153-344)

Pt. 9. Senn, H. A. A bibliography . . . 1941-45. Entries 4385-5402. (Canada, Dept. of Agriculture, Publication 863, Dec. 1951. 183 p.) **File seen:** DLC.

33143. ADAMS-RAY, JACK. De akuta kylskadornas behandling. (Nordisk medicin, Mar. 28, 1942, v. 13, p. 915-16) Text in Swedish. **Title tr.:** Treatment of acute cold injuries.

Short article on the causes of cold injury and therapy (cold treatment, massage, ointments, etc.) presented more fully in the item following.

Copy seen: DSG.

33144. ADAMS-RAY, JACK. Om kylskadors behandling. (Tidskrift, i militär hälsovård, 1943, v. 68 (suppl.) p. 59-64). Text in Swedish. **Title tr.:** On the treatment of frostbite.

Contains text of a lecture delivered at the meeting of Svenska Militärläkarreföreningen, Stockholm, April 1943, with information on: selected earlier studies on frostbite therapy; recent methods of quick rewarming, adherents and opponents; principles of therapy for armed forces in winter campaigns according to stage and severity of cold injury.

ADLER, BRUNO FRIDRIKHOVICH, see Findeisen, H. Landkarten der Jenissei (Ketó). 1931. No. 34671.

33149. ADRIANOV, V. A. Raskopki u Sale-kharde v 1935. (Sovetskaya arkeologiya, 1936. t. 1, p. 278.) Text in Russian. **Title tr.:** Excavations at Salekhard.

Contains a brief report on field work done in 1935 on the Poluy River, 4-5 km. from Salekhard. Digging was carried on at five points and about 1500 objects were excavated, mostly of bone, a few also of bronze, stone and iron (knives exclusively). Ornamented pottery and several sculptures and engravings of animals were found. Bones and harness of dog and reindeer show that they were domestic animals. The Poluy sites are considered as belonging to a late bronze age culture. **Copy seen:** DLC.

ADRIANOV, V. S., see Chernyshev, V. N., and others. Drevnaya istoriya nizhnego Priob'ya. 1953. No. 34118.

33150. AERO DIGEST. Multi-purpose landing gear. (Aero digest, Aug. 1954. v. 69, no. 2, p. 93, illus.)

Contains brief description of the Universal Landing Gear, made by All American Engineering Co., Inc. The ski-like attachment can be made to the conventional landing gear of standard aircraft permitting it to alight on land, water, ice, snow or mud, thus of special interest to arctic flying.

Copy seen: DLC.

33151. AERO DIGEST. Record-breaking long-range Russian monoplane ANT-25. (Aero digest, Aug. 1937. v. 31, no. 2, p. 32, 34, illus.)

Contains description of the ANT-25 (NO-25) a single-engined Russian monoplane, which established a non-stop flight record of 6262 miles from Moscow to the U. S. via the North Pole, June 18-20, 1937. Only Russian materials were used in the all-metal plane which has an aspect ratio of over 13. The 12 cylinder V-type engine develops 950 horsepower at 1950 revolutions per minute. Specifications and estimated performance figures are tabulated, and landing gear details are illustrated.

33152. AERONAUTICS. Polar flights by the R. A. F.; new light on arctic navigation; E. A. N. S. enterprise. (Aeronautics, London, July 1945. v. 12, no. 6, p. 54-55, illus. on p. 61-62.)

Brief account of the *Aries* flights to the North Pole in 1945 from the Empire Air Navigation School station, Shawbury, Eng. A short historical survey of other flights made to the North Pole is included.

Copy seen: DLC.

33153. AEROPLANE. Breaking the ice out west. (Aeroplane, London, Dec. 10, 1954. v. 87, no. 2264, p. 838.)

Brief note concerning the use of a helicopter to free a barge frozen in 15 ft. of ice at one end of a lake during the construction of the Aluminum Co. of Canada's smelter and power plant project at Kitimat, B. C. The helicopter was fitted with spraying equipment and a hopper for lampblack, which was sprayed on the lake causing the sun to melt the ice and snow at a rate of about one foot per day.

Copy seen: DLC.

33154. AEROPLANE. Sunderlands in Greenland. (Aeroplane, July 9, 1954. v. 87, no. 2242, p. 41)

Brief note announces the flight of Sunderland flying-boats of the R. A. F. Coastal Command to Greenland in July-Aug. 1954, final operation in the series of flights conducted since 1951 to assist the British North Greenland Expedition. Five Sunderlands will collect 21 members of the expedition (Cdr. C. J. W. Simpson, leader) and equipment from Britannia Lake (77°07'N. 23°50'W.) and return them to Pembroke Dock, South Wales. Twelve husky dogs were purchased by the expedition at

the request of the Falkland Islands Dependencies Survey to improve existing dog teams in the Antarctic.

33155. ÄYRÄPÄÄ, AARNE ELIAS, 1887-
The settlement of prehistoric age. (Fennia, 1952, v. 72, p. 285-99, illus., 11 text maps) 12 refs.

Contains a review of the stone, bronze and iron ages in Finland. People first came to this region about 7000 B. C. The arctic Komsa or Finnmark culture advanced from eastern Europe along the deglaciated neck of land between the Fennoscandian ice sheet and the White Sea to the Arctic Ocean, Finnmark, Petsamo and the Rybachiy Peninsula, and it lasted to the end of the Ancylus period. The comb ceramics became known in the region about 3000 B. C. Baltic Finns came across the Gulf of Finland around the beginning of the Christian era, found in Finland some descendants of the stone age population and Lapps who were pushed north. Only in the late iron age (800-1300 A. D.) did the Finns begin to make expeditions into northern Scandinavia, and from Karelia to the Arctic Ocean and the White Sea in territory where the Lapps ranged.

33156. AFANAS'EV, V. F. Uspekhi narodnogo obrazovaniia v Iakutii. (Sovetskaiia pedagogika, 1953, no. 5, p. 79-89) 20 refs. Text in Russian. *Title tr.:* Progress of public education in Yakutia.

Contains a review of education and schools since 1734 when the first school in Yakutia was founded for Russian children only. Though natives have been admitted to the schools since 1801, 99.3 percent of the population in Yakutia were illiterate before the Revolution. The educational activities of the church, administration and political deportees are sketched; the present-day situation is reported in more detail and with statistics (in 1952 Yakutia had 592 schools with 65,000 pupils). Teaching and political indoctrination are closely interconnected.

33159. AGY, VAUGHN. The location of the auroral absorption zone. (Journal of geophysical research, June 1954, v. 59,

no. 2, p. 267-72, text map, 6 graphs) 2 refs.

Since early 1951 a chain of radio-wave field-strength recording stations has been in operation along the 90th west meridian, equipped by the Central Radio Propagation Laboratory (Washington, D. C.) and operated primarily by the Canadian Dept. of Transport. Stations are Baker Lake (Keewatin District, 64°19' N. 96°01' W.), Churchill (Manitoba, 58°46' N. 94°10' W.), The Pas and Winnipeg (Manitoba), Fargo and Bismarek (North Dakota). A study of data from a chain of radio-wave field-strength recording stations along the 90th meridian suggests that the "auroral absorption zone" coincides with the zone of maximum frequency of occurrence of visible aurora. North of this, there appears to lie a region in which absorption is extremely low. Although the accuracy of location of the absorption zone is limited by use of fixed transmitters and receivers, as well as by the fact that varying modes of propagation are not taken into account, the indications are that it is somewhat farther north and narrower than has been suggested previously.—*From author's abstract.*

33161. AHNfelt, S. Trends in winter warfare. (Military review, Nov. 1953. v. 33, no. 8, p. 89-97, 5 illus.). Translated and digested from *Nya tendenser i vinterkrigsforenngen* by Captain S. Ahnfelt, pub. in Swedish in *Ny militär tid*, 1953, Bd. 26, no. 3, p. 59-63.

Finnish and Soviet winter warfare tactics used during battles in 1939-1940 are cited. Finnish successes are attributed largely to superior mobility. American, Canadian, and Soviet ski training efforts are described. The use of airborne forces to increase mobility of ground units is

emphasized. The use and limitations of caterpillar-treaded vehicles such as Weasels and Mark II Penguins for moving troops and supplies are described. The importance of road networks for transporting heavy equipment is indicated, and ten major tactical operations expected from an army of a major power engaged in future winter operations are summarized.

33163. AIR FORCE. Guide to USAF bases overseas; a rundown, within security limits, on the installations that make the Air Force global. (Air force, Sept. 1954. v. 37, no. 9, p. 94-96, map.)

Contains a listing, alphabetically by country, of USAF bases overseas. The location, type of base, origin of name, and housing facilities are given. Included are Alaskan, Greenland, Labrador and Newfoundland listings. **Copy seen:** DLC.

33164. AIR FORCE. Our arctic underground: the AF's "sub-zero heroes"; where living quarters "float" in the snow of Greenland's ice cap. (Air force, Jan. 1955. v. 38, no. 1, p. 28, 31, illus.)

Contains brief description of a permanent type of installation constructed of magnesium, aluminum, plywood, and

fiberglass panels set inside galvanized steel culvert tubes, 18 ft. in diameter and floating in the snow of Greenland's inland ice. Cargo and personnel hatches are extendible to keep them above the snow surface. Airmen living in the units man an experimental weather station, and are assigned for tours of duty of only three months. Diesel generators supply power, fueled from 55-gallon drums dropped by air. Water is obtained by melting snow in a fuel-powered melter. Temperature of the living areas is maintained at 72° F. *Copy seen:* DLC.

33165. AIR UNIVERSITY QUARTERLY REVIEW. Photo notes: the strategic Arctic. (Air University quarterly review, Fall 1952. v. 5, no. 3, p. 22-23, illus.)

Photographs (3) showing the U. S. Air Force weather observation station on floating ice island T-3, a C-47 parked at the geographic North Pole after a flight from T-3, and a man-made landmark on top of Cape Columbia found while inspecting the ice shelf off the coast of Ellesmere Island for possible origin of fresh-water ice island T-3. The site marked the starting point of Peary's expedition to the North Pole in 1908.

Handbook dealing with the Russian rivers "against the background of physico-geographical conditions." Part 1, by V. E. Ioganson (p. 5-47) presents their general hydrological characteristics, water supply and balance, annual distribution of run-off, sediments, etc. Part 2, by V. A. Aref'eva, V. E. Ioganson, A. O. Kemmerikh, N. T. Kuznetsov, and A. I. Chebotarev (p. 48-277) treats the rivers according to hydrographic regions and includes the largely arctic areas of western, central and northeastern Si-

beria (p. 122-81). For each area, the general characteristics, average run-off, main rivers, etc., are discussed. Part 3, by N. T. Kuznetsov (p. 278-308) deals with man-made changes of the hydrography and water regime, such as canals, reservoirs, hydroelectric works, irrigation, etc. An extensive alphabetic index, and many photo. illus. of rivers, lakes, canals and reservoirs are included.

Copy seen: DLC.

33171. AKADEMIĀ NAUK SSSR. INSTITUT ISTORII NAUK I TEKHNIKI. Pamĭti L. ĪĀ. Shternberga 1861-1927. Redaktery izdaniĭ S. F. Ol'denburg i A. N. Samollovich. Leningrad, 1930. 176 p. 2 ports. (*Its*: Ocherki po istorii znanii, 7) 129 refs. Text in Russian. **Title tr.:** In memory of L. ĪĀ. Shternberg, 1861-1927. Editors S. F. Ol'denburg and A. N. Samollovich.

Contains, as introduction, a biographic chronology and lists of his (129) published and (32) still unpublished works, followed by nine papers in tribute to this outstanding ethnographer:

S. F. Ol'denburg. Lev ĪĀkovlevich Shternberg, uchenyi i chelovek (L. ĪĀ. Shternberg as scientist and man) p. 21-28. A biographic sketch, with focus on the most important events of his life and his good points in character.

ĪĀ. S. Ėdel'shtein. L. ĪĀ. Shternberg i ego rol' v sozdaniĭ ětnograficheskoi shkoly (L. ĪĀ. Shternberg and his role in creating a school of ethnography) p. 31-35. Shternberg's work at Muzei antropologii i ětnografii in Leningrad from 1901, and the influence of his teachings upon the new generation of ethnographers are outlined.

B. ĪĀ. Vladimirtsov. L. ĪĀ. Shternberg kak lingvist (L. ĪĀ. Shternberg as a linguist) p. 37-49. His contribution to investigation of the Gilyak language is evaluated.

I. N. Vinnikov. L. ĪĀ. Shternberg kak issledovatel' pervichnykh soĭsial'nykh form (L. ĪĀ. Shternberg as investigator of a primitive form of social life) p. 51-83. Gilyak material was used by Shternberg in an attempt to support Lewis H. Morgan's theory on the origin and primitive forms of marriage.

V. G. Bogoraz. L. ĪĀ. Shternberg kak fol'klorist (L. ĪĀ. Shternberg as a folklorist) p. 85-96. Analysis of Gilyak texts published in Shternberg's *Materialy*, etc., 1908 (*Arctic Bibliography*, No.

320151) or left among his mss. Different genres of Gilyak folklore are characterized and their relationship to American Indian folklore indicated.

S. A. Ratner-Shternberg. L. *ĪA*. Shternberg kak issledovatel' religii (L. *ĪA*. Shternberg as investigator of religions) p. 97-136. His modified theory of Edward B. Tylor's animism is outlined. Religion, according to Shternberg, is one of the means used by primitive man in his fight for existence.

ĪA. P. Al'kor (Koshkin). L. *ĪA*. Shternberg kak tungusoved (L. *ĪA*. Shternberg as a Tungus investigator) p. 137-57. His field work in 1895-1896 and 1900 among the Orochis, Olehis and Golds is reported, based on material left in mss.

S. V. Ivanov. L. *ĪA*. Shternberg i primitivnoe iskusstvo (L. *ĪA*. Shternberg and primitive art) p. 158-72. Shternberg's ideas on the meaning and purpose of folk art, especially ornaments, are outlined.

A. N. Samollovich. L. *ĪA*. Shternberg i turkologiā (L. *ĪA*. Shternberg and Turcic linguistics) p. 173-76. Notes on occasional quotations of Yakut and other Turcic words in Shternberg's articles.

33172. AKADEMIĀ NAUK SSSR. INSTITUT NAUCHNOĪ INFORMATSII. Referativnyi zhurnal; geologiā i geografii. July-Dec. 1954, no. 1-6, Moskva, Izd-vo Akademii Nauk. Text in Russian. *Title tr.:* Journal of abstracts; geology and geography.

This monthly journal, published by the Institute of Scientific Information of the Academy of Sciences of the U.S.S.R. since July 1954, offers a selective, partly annotated bibliography of Soviet and foreign scientific books and papers on geology and geography. International in areal scope, it has a subject arrangement: stratigraphy and paleontology, Quaternary geology, geophysics, tectonics, lithology, volcanology, petrography, mineralogy, geochemistry, study of commercial mineral deposits, hydrogeology, engineering geology, and regional geology; cartography, physical geography (including oceanology, glaciology, frozen ground study) and regional geography (including Soviet, European, and American sectors of the Arctic, Alaska and Greenland). An author index is in each issue; and a general index for 1954-1955 announced. Purpose of this journal is

explained in the first issue; issues 1-6 contain 7567 items; annotations range from few lines to several pages with maps, plans and diagrams, e. g. in no. 5, p. 187-89, the substantial abstract of the V. F. Burkhanov's paper on ice islands.

33175. AKADEMIĀ NAUK SSSR. VESTNIK. Ob issledovaniakh sovetskikh uchenykh v Arktike. (Akademii nauk SSSR. Vestnik, June 1954. v. 24, no. 6, p. 76-77) Text in Russian. *Title tr.:* Explorations of the Soviet scientists in the Arctic.

Summary of a report delivered by the Arctic Institute to the Presidium of the

Academy on recent accomplishments: the discovery in 1948-49 of a great submarine mountain range 2.5-3.0 km. in height, extending across the Arctic Basin from the New Siberian Islands to Greenland; discovery of a singular, extensive arctic magnetic anomaly; investigation of marine fauna found in abundance in the highest latitudes. The Presidium acknowledged the significance of these achievements, which upset in many respects former views on the Arctic Basin; approved the proposal to name the submarine ridge "Lomonosov Range;" and confirmed the plan for further arctic explorations. The project for a high latitudes expedition in 1954, with several drifting stations, is mentioned.

33176. AKADEMIĀ NAUK SSSR. ZOOLOGICHESKII INSTITUT. Atlas okhotnich'ikh i promyslovykh ptits i zverei SSSR. Pod obshef. red. S. A. Zernova i E. N. Pavlovskogo, t. 1, Ptitsy; t. 2, Zveri. Moskva, 1952-1953. 2 v. (v. 1: 371 p., illus, 66 col. plates; v. 2: 294 p., illus. 70 plates (part. col.) (Akademiiā nauk SSSR. Zoologicheskii institut. Tsentral'nyi sovet Vsearm'skogo voenno-okhotnich'ego obshechestva) Text in Russian. **Title tr.:** Atlas of the game and commercial birds and animals of the U.S.S.R. General editors S. A. Zernov and E. N. Pavlovskii. v. 1, Birds, v. 2, Animals.

Vol. 1 contains an introductory outline on economic value, variety, general morphology and biology of birds, followed by descriptions of Russian representatives belonging to ten orders. Some of these orders as the Colymbiformes (eiders) by E. V. Kozlova, Anseriformes (geese and ducks) by A. Ā. Tugarinov, Galliformes (incl. ptarmigan) by S. A. Buturlin and L. A. Portenko, Falconiformes by B. K. Shtegman, etc., are widely represented in the arctic areas. Description includes morphology, and morphometry, distribution, ecology, behavior, food, annual life-cycle, economic value, etc. The more common forms are represented on 66, mostly colored, plates. A final section (p. 344-58) offers instructions on observing birds, nests and eggs, collecting, taxidermy, etc., by Portenko.

Vol. 2, prepared by a group of zoologists under direction of B. S. Vinogradov, G. A. Novikov and L. A. Portenko, presents a general sketch of mammals

and a systematic list of the species of orders: Insectivora, Glires, Carnivora, Artiodactyla and Perissodactyla. About a hundred of the more important game species are described, with illustrations (some colored) and data on geographic distribution, variation, habitat, biology, ecology, enemies and diseases; their economic importance and hunting and trapping are also noted. Instructions on making observations, on collecting and preparation of zoological material (by L. A. Portenko) is added. Many species native to northern regions of the U.S.S.R., such as the polar bear, arctic fox, reindeer sable, marten, etc., are included.

33177. AKADEMIĀ NAUK SSSR. ZOOLOGICHESKII INSTITUT. Zhivotnyi mir SSSR, t. 4; lesnāia zona. Moskva-Leningrad, Izd-vo Akad. nauk, 1953. 737 p. illus. (324 figs.) 2 maps. Text in Russian. Editor in chief: E. N. Pavlovskii; editorial board: B. S. Vinogradov (editor), L. V. Arnol'di, and G. A. Novikov. **Title tr.:** The animal world of the U.S.S.R., t. 4; the forest zone.

The fauna of the forest zone is characterized generally, and an ecological and systematic review of its representatives, given. A geographic and botanical survey (p. 7-61) and notes on the prevailing life conditions (p. 62-83) by Sochava and Novikov respectively serve as an introduction to the review of the fauna. The review itself in systematic

order (Mammals to Worms) comprises 19 papers as listed below (title tr.). Bibliographies appear with each paper (ca. 650 refs. in all); and indexes of Russian and Latin names of animals are appended (p. 676-737). Each paper (except Kirianova's) is described in the Bibliography under its author's name.

SOCHAVA, V. B. Forest zone vegetation.

NOVIKOV, G. A. Life conditions of animals in the forest.

Systematic review of the animals:

I. VINOGRADOV, B. S. Mammals.

II. IUDIN, K. A. Birds.

III. CHERNOV, S. A. Reptiles.

IV. TERENCEV, P. V. Amphibians.

V. Insects:

1. SHTAKEL'BERG, A. A. Diptera.

2. POPOV, V. V. Hymenoptera.

3. KOZHANCHIKOV, I. V. Lepidoptera.

4. LEPNEVA, S. G. Trichoptera.

5. KOZHANCHIKOV, I. V. Neuroptera.

6. ARNOL'DI, L. V. Coleoptera.

7. KIRICHENKO, A. N. Hemiptera-Heteroptera.

8. SHAPOSHNIKOV, G. KH. Aphidoidea.

9. BORKHSENIUS, N. S. Coccoidea.

10. BEĬBIENKO, G. ĪA. Orthoptera and Dermaptera.

11. POPOVA, A. N. Odonata.

VI. KHARATINOV, D. E. Arachnoidea.

VII. LIKHAREV, I. M. Molluscs.

VIII. Worms:

1. MALEVICH, I. I. Earth worms.

2. Kirianova, E. S. (no arctic material).

NOVIKOV, G. A. The vertebrates' role in forest life.

STARK, V. N. A brief review of wood-destroying pests of the forest zone.

NOVIKOV, G. A. Commercial and game animals and birds of the forest zone.

GUTSEVICH, A. V. Blood-sucking insects (gnats) of the forest zone.

33180. AKIMUSHKIN, I. I. Osnovnoi ob'ekt pitanii butylkonosa, *Hyperoodon rostratus* Müller. (Akademiia nauk SSSR. Doklady. Mar. 11, 1954. nov. seriia, t. 95, no. 2, p. 419-20, illus.) 12 refs. Text in Russian. *Title tr.:* An essential component of the food of the bottlenose whale, *Hyperoodon rostratus* Müller.

Contains the results of a study of the stomach content of specimens of this whale in the Sea of Okhotsk. A rare fish, *Podonema longipes*, was identified as the chief food component.

Copy seen: DLC; MH-Z.

33181. AKKURATOV, VALENTIN IVANOVICH. Bluzhdaushchie ostrova. (Vokrug sveta, June, 1954, no. 6, p. 17-21, illus., col. plate, map, plan.) Text in Russian. *Title tr.:* The wandering islands.

Popular discussion of the problem of hypothetical lands and explanation of their "discoveries" and disappearance by the illusory appearance of large icebergs and floating ice islands. The story is told of the discovery of such a land by Sannikov in 1810 and 1811, and the failure to find it again by systematic search (cf. sketch map, p. 19); author's observations of several floating ice islands during his arctic flights in 1937-46

are noted; the flyer V. M. Perov is said to have discovered in 1950 the ice island now known as T-3; eleven small islands are claimed to have been found from aircraft by the author and I. P. Mazuruk in the northern Franz Joseph Land area.

Copy seen: DLC.

33182. AKKURATOV, VALENTIN IVANOVICH. Chetyre polüsa. (Vokrug sveta, Nov. 1953. no. 11, p. 33-36, illus., map) Text in Russian. **Title tr.:** Four poles.

Popular notes on the four poles of the Northern Hemisphere: the geographic North Pole, Magnetic Pole, the Pole of Inaccessibility, and the Cold Pole (at Oymyakon). The role of Russian and especially Soviet scientists in the discovery and investigation of these poles is emphasized, e. g., the theory of terrestrial magnetism is stated to have been first conceived by the Russian professor, I. M. Simonov.

Copy seen: DLC.

33183. AKKURATOV, VALENTIN IVANOVICH. Na dreflufushchikh l'dakh (Vokrug sveta, Aug. 1954, no. 8, p. 9-13, 8 illus.) Text in Russian. **Title tr.:** On the drifting ice.

Impressions by the noted arctic air navigator on the Soviet Drifting Station "North Pole-4," set up in April 1954 at 75°48' N. 175°25' W. The search for, and properties of drifting ice suitable for the camp site, polar bears visiting the camp, helicopter transport of equipment from landing place to camp site, visit to the Drifting Station "North Pole-3," etc., are recounted.

Photographs by P. Barashev include a group taken at the geographic North Pole (not mentioned in text) views of the camp, aircraft, equipment being set up, etc. Aircraft personnel (20) participating in the expedition, are listed (p. 11).

Copy seen: DLC.

33184. AKKURATOV, VALENTIN IVANOVICH. Noch' nad kryshel mira. (Vokrug sveta, Nov.-Dec. 1948, no. 11-12, p. 8-13, illus., map) Text in Russian. **Title tr.:** A night over the roof of the world.

A description of the 4,365 km. non-stop flight of the SSSR N-331 with M. A. Titlov and others from Cape Chelyuskin via Cape Molotov to the North Pole and back via Cape Anisiy to Chokurdakh on the Indigirka, on Oct. 2, 1945 (cf. *Arctic Bibliography*, No. 144 and 146). Preparation of the aircraft

for the flight, emergency landing equipment, the flight from Moscow to the Taymyr Peninsula, the polar station on Cape Chelyuskin, etc., are noted. Difficulties of navigation in arctic conditions and methods used for orientation are discussed, as well as deviation from course due to influence of the "second magnetic pole," called "Sedov's Pole" at approx. 86°30' N. 165° E. Ice conditions are illustrated by eight photos; map shows route of the flight.

ALASKA. DEPT. OF HEALTH, see *Alaska's health*. Sanitation aide work begins for villages . . . 1954. No. 33201

33185. ALASKA. DEPT. OF MINES. Report of the Commissioner of Mines to the Governor for the biennium ended Dec. 31, 1936-[Dec. 31, 1954]. Juneau, 1937-1955. 9 v. tables. v. 3 covers 1941-1944. This report continues that of the Inspector of Mines issued for the years or biennia 1912-1933 in 15 v. They were prepared by J. A. Holmes (1912), S. S. Smith (1913-1914), W. Maloney (1915-1917), B. D. Stewart (1918-1948, with B. W. Dyer in 1921), L. H. Saarsela (1949-50), and L. H. Holdsworth (1951-1954).

Reports contain information on administration, services and jurisdiction; field investigations (property examined, chief minerals, location, etc.); safety inspection; work of assay office and field stations; status and needs of the mining industry; mining of precious metals (by district), coal, base metals, radioactive minerals, non-metallics, oil and gas; laws and regulations dealing with locating and leasing ground; tabulated mineral production during biennium; fatalities; employment tabulated 1914 through current year; active mining operations (company).

File seen: DGS (except 1923-1926).

33186. ALASKA. DEVELOPMENT BOARD. Alaska's dollar shortage; the need for incentives to business investment and industrial development on the last frontier. Edited and arranged by George Sundborg. Juneau, 1952? 50 p. Mimeographed.

Contains excerpts from addresses at public forum discussions held in Anchorage, Nov. 11-12, 1951, under the auspices of the Alaska Development Board. Ten Alaska business leaders spoke as follows: R. B. Atwood, Shackles to development

in history; E. E. Rasmuson, Shackles on investment; H. Strandberg, Shackles on the mining industry; D. L. Irwin, Shackles on agricultural development; G. Sundborg, Shackles on manufacturing; L. A. Moore, Shackles on the tourist industry; W. E. Kepner, Industries and services essential to defense; W. S. Carruthers, Labor's part in the development of Alaska; P. A. Johnson, Financing problems in Alaska; D. E. Skinner, water transportation problems.

33190. ALASKA COOPERATIVE WILDLIFE RESEARCH UNIT. Quarterly report, College, Alaska, v. 3, no. 4-v. 6, no. 2, Apr./June 1951-Oct./Dec. 1954, in progress.

In continuation of *Arctic Bibliography*, No. 27696, progress reports are given on the following research projects:

Muskrat study: races, distribution, vital statistics, population dynamics, management.

Beaver study: food, reproduction, counts, growth.

Migratory water fowl: nesting; reproduction, banding.

Ptarmigan study: population dynamics, food, roosts, courting and mating, productivity.

Caribou movements, abundance distribution: Steese Highway herd; also food, age of kill, counts.

Beaver management, tagging, age ratios, vital statistics.

Marten in interior Alaska: population dynamics, food, habitat.

Mountain goat, Seward-Kenai area: habitat, population dynamics, reproduction.

Grayling in the Little Salcha River: migration, growth, food.

Peregrine falcons of Alaska: distribution.

Wolverine: life history, food, range, reproduction.

Pacific walrus in Bering Strait and the Arctic Ocean: dentition and age, reproduction.

Wildlife economics, a new study on the expenditures of hunters, fishermen and trappers; etc.

Bison study in the Big Delta area: occurrence, carrying capacity of the range, food.

Breeding biology of the greater and lesser scaup, a study on similarities and differences of behavior, migration, reproduction.

Effects of fire on Alaskan wildlife.

Effects of simulated browsing on wildlife food plants.

Snowshoe hare: population fluctuations and productivity.

Mammals of Alaska: collection of specimens for taxonomic studies, life histories.

In addition, information is supplied on the personnel and cooperating agencies of the Unit, Dr. J. L. Buckley, director, and on publications, lectures regarding wildlife, radio programs, etc.

33191. ALASKA'S HEALTH. Anchorage Medical Center admits first TB patients immediately after opening; Alaska Native Service hospital has 300 TB and 100 general beds. (Alaska's health, Feb. 1954. v. 11, p. 1, 4, illus.)

Contains information on the largest civilian hospital in the Territory, its construction, cost (over \$7,200,000), facilities, staff (425) and their living quarters, patients' quarters, heat and water supply, etc.

Copy seen: DSG.

33192. ALASKA'S HEALTH. Chest X-ray unit has busy season along highway at villages and camps from Haines to Fairbanks. (Alaska's health, Dec. 1954. v. 11, p. 3, illus.)

Contains an account of the work of the Truck X-ray Unit between July and September along the route Haines-Fairbanks. 3130 persons were X-rayed for tuberculosis; heart diseases, lung tumors, etc. were also disclosed during these routine chest examinations. From Sept. 1 till mid-October, 6,181 persons were examined in Fairbanks.

Copy seen: DSG.

33193. ALASKA'S HEALTH. Chest X-ray unit scheduled to begin operation along highways. (Alaska's health, June 1954. v. 11, p. 1, 3, illus.)

A mobile X-ray unit is scheduled to begin operations in June for indications of cancer, heart or TB conditions. The Alaska Dept. of Health will direct the work in cooperation with the Alaska Tuberculosis Assn. and the Alaska

Division of the American Cancer Society. Route, personnel, ways of work, etc. are also discussed.

Copy seen: DSG.

33194. ALASKA'S HEALTH. Health survey team has recommendations. (Alaska's health, Oct. 1954. v. 11, p. 1, 4)

Contains an outline of recommendations for the solution of Alaska's tuberculosis problem made by Dr. Parran's Alaska Health Survey team from the University of Pittsburgh. Improved nutrition and living conditions, head the list of recommendations.

Copy seen: DSG.

33195. ALASKA'S HEALTH. Ketchikan food handlers go back to school for refresher course. (Alaska's health, Apr. 1954. v. 11, p. 2, illus.)

The fourth such course in 10 years sponsored by the Alaskan Dept. of Health, it teaches how bacteria grow, and control of their growth; correct dishwashing and sanitation; proper food handling, personal hygiene, and self-protection.

Copy seen: DSG.

33196. ALASKA'S HEALTH. Ketchikan laboratory studies disclose gulls are implicated in disease spread. (Alaska's health, Apr. 1954. v. 11, p. 1-2, illus.)

Salmonella organisms were found in one out of 14 gulls examined and in two patients hospitalized at the same time with gastro-enteritis. The basic problem is proper sewage disposal, which would prevent animal contamination and ultimately human infection. Sanitary water supply is another important preventive.

Copy seen: DSG.

33197. ALASKA'S HEALTH. Many children attend Alaska EENT clinics. (Alaska's health, Aug. 1954. v. 11, p. 6)

Contains information on eye, ear, nose and throat (EENT) diseases among Alaskan children; tonsillectomies, eye-testing and fitting of glasses, work in outlying areas and in large communities, sponsors, etc.

Copy seen: DSG.

33198. ALASKA'S HEALTH. New ANS Anchorage Medical Center brings tuberculosis beds in territory to 820; history shows that TB hospitals developed very slowly in Alaska. (Alaska's health, Feb. 1954. v. 11, p. 2)

Contains information on the capacity of this Alaska Native Service hospital; first hospitals in Alaska (1912, 1915) and

their character; later developments; facilities for tuberculosis patients, etc.

Copy seen: DSG.

33199. ALASKA'S HEALTH. 1949 to 1953 births soar; stork's Alaska flight traffic almost doubles in 5 years. (Alaska's health, Oct. 1954. v. 11, p. 1, 4, illus.)

Contains notes on vital statistics of Alaska for the 5-year period 1949-1953. A substantial increase in birth rate is noted and discussed; tabular summary, p. 4.

Copy seen: DSG.

33200. ALASKA'S HEALTH. Rabid wolves and foxes reported in Alaskan North and Interior. (Alaska's health, June 1954. v. 11, p. 4, illus.)

Reports on rabid wolves and foxes are quoted from the Kuskokwim and Yukon Rivers and the Seward Peninsula, confirmed by laboratory findings. The nature of rabies, transmission, symptoms in animals, precautions, etc., are also discussed.

Copy seen: DSG.

33201. ALASKA'S HEALTH. Sanitation aide work begins for villages in 3-way sponsorship. (Alaska's health, Dec. 1954. v. 11, p. 1-2)

An outline of the project which is to include a study of the basic sanitary needs of the village area; training of sanitation aides; control of water supply and waste disposal. The program is sponsored by the Alaska Native Service, the Alaska Dept. of Health and the Arctic Health Research Center.

Copy seen: DSG.

33202. ALASKA'S HEALTH. Unalakleet residents work in busy Health Council. (Alaska's health, Oct. 1954. v. 11, p. 3, illus.)

Contains notes on the "Clean-up Day" and garbage disposal service of this West Alaskan village; sled dogs control; summer curfew for children, etc.

Copy seen: DSG.

33203. AL'BANOV, VALERIAN IVANOVICH, 1881-1919. Podvig shturmana V. I. Al'banova [Zapiski V. I. Al'banova o puteshestvii po dreifuushehim l'dam Severnogo Ledovitogo okeana letom 1914 goda. Red. i kommentarii N. I. A. Bolotnikova]. Moskva, Gos. izd-vo geogr. lit-ry, 1953. 174 p. illus., port., fold. map. Text in Russian. *Title tr:* Heroic deeds of navigator V. I. Al'banov [V. I. Al'banov's diary of the journey on drifting ice of the Arctic Basin in summer 1914. Edited with commentary by N. I. A. Bolotnikov].

The first edition of Al'banov's journal of his trip over the drifting ice with ten other members of Brusilov's expedition, from the ice-fast *Sv. Anna*, to Cape Flora in Franz Joseph Land, and the rescue of two survivors of Sedov's expedition on the *Sv. Foka*, was published in 1917; since then, many complete and abridged editions appeared under various titles, cf. *Arctic Bibliography*, No. 198. In this new edition, the text of the first is reprinted omitting supplements (Brusilov's report, excerpts from the *Sv. Anna's* log-book, meteorological data); editor's preface with a brief biography of Al'banov, a reprint of N. V. Pinegin's introduction to the 1934 edition, and editor's notes are added.

Copy seen: DLC.

33204. ALBAUM, HARRY GREGORY, and L. J. MILCH. Adenosine triphosphate changes induced by cold, heat and crush injury. (American journal of physiology, Aug. 1954. v. 178, no. 2, p. 293-95, 4 tables) 7 refs.

Right legs of rabbits were exposed to above injuries and the tibialis anticus and extensor digitorum longus muscles examined 18 hrs. later. In the case of cold injury, no significant change in adenosine triphosphate occurred unless the leg had been frozen, in which case it decreased by nearly 90 percent. The breakdown of ATP appeared to be completed 18 hrs. after exposure.

Contains a critical revision of the taxonomy and geographic variation of *Bonasa umbellus*, with data on individual and geographic variation and its ecological significance, a key to races and descriptions of 12 subspecies (four described as new); their measurements, plumages (brown and gray phases) and detailed distribution are given. Ecological classification of this game bird is added. The Yukon ruffed grouse *B. umbellus yukonensis* (p. 100-101), native to Alaska and Mackenzie District, is included.

33209. ALEKSEEV, NIKOLAI NIKOLAEVICH. Plavanie parokhoda "Sovet" k ostrovu Vrangela v 1932 g. (Leningrad. Arkticheskiĭ . . . institut. Būlleten', 1933, no. 3, p. 45-47, 72-73, and no. 4, p. 111, map) Text in Russian. Summary in English. **Title tr.:** Voyage of the steamer *Sovet* to Vrangell Island in 1932.

The steamer under Capt. K. A. Dublitskiĭ was sent from Vladivostok in July, with a seven-man wintering party and supplies for the colony founded on Vrangell Island in 1926. By Aug. 27, the *Sovet* was within nine miles of Rogers Bay, but the heavy ice and a damaged screw prevented the ship from reaching the island; on Sept. 6, personnel and supplies were transferred from ship to shore by aircraft. The route of the expedition, ice conditions, and the scientific observations carried out, are noted. Sketch map of ice conditions is given in no. 4, p. 111 (cf. Arctic Bibliography, No. 244). **Copy seen:** DLC.

33213. ALLCUT, EDGAR ALFRED, 1888- . Air pollution control in Canada. (Engineering journal, Mar. 1954. v. 37, no. 3, p. 249-53, 3 tables) 29 refs.

Includes summary (p. 252) of the arsenic trioxide investigation being carried on by Dr. Kingsley Kay (Occupational Health Laboratory, Ottawa), at Yellowknife, Mackenzie District. The town lies between two mines whose stacks emitted 12 tons per day of arsenic trioxide, killing cattle and wildlife, and causing arsenical poisoning among humans. Attempts to control the emission and to clarify the allowable limits of contamination are described.

33214. ALLCUT, EDGAR ALFRED, 1888- , and F. C. HOOPER. Possibilities of the heat pump in Canada. (Engineering journal, June 1952. v. 35, no. 6, p. 610-614, illus., diagr., 3 graphs, 3 tables)

Includes report of investigations carried out by the University of Toronto

under auspices of the Canadian Defence Research Board on use of the heat pump in arctic settlements. Pump design and use of lake or sea water as a heat source are discussed. Tests showed that the pump delivered approx. two and one-half times as much heat as would be obtained from the same fuel in a conventional oil-burning heater. Advantages include low fire hazard and possible inclusion of and electric generator and water pump. Disadvantages are large size, weight, and difficulty of maintenance in remote areas.

33215. ALLDREDGE, LEROY ROMNEY, 1917- , and F. KELLER, Jr. Preliminary report on magnetic anomalies between Adak, Alaska, and Kwajalein, Marshall Islands. (American Geophysical Union. Transactions, Aug. 1949. v. 30, no. 4, p. 494-500, 3 text maps, profiles) 6 refs.

In June-Aug. 1947, the U. S. Office of Naval Research, U. S. Geological Survey, Naval Ordnance Laboratory, and U. S. Naval Air Modification Unit (Johnsville, Pa.) cooperated on a large-scale aeromagnetic survey in the Aleutians and Marshall Islands. Purpose of Project Volcano was to map the total magnetic field intensity anomalies associated with the Aleutian Trench, Aleutian volcanoes, and atolls in the Marshalls. During the survey a continuous magnetometer record was obtained from Adak Island (51°46' N. 176°40' W.) to Kwajalein. Comparison of these data with magnetic charts of the route is made and anomalies found are discussed.

33216. ALLEN, EDWARD WEBER, 1885- . North Pacific fisheries. (North American Wildlife Conference. 9th, Chicago. Transactions, 1944. p. 220-23)

Contains account of origins and activities of the International Fisheries Commission in the North Pacific including the Bering Sea; the three-mile limit and encroachment of the Japanese on Alaskan and British Columbian fishing grounds, etc.

Copy seen: DLC.

33217. ALLEN, JOEL ASAPH, 1838-1921. The geographical distribution of North American mammals. (American

Museum of Natural History, New York. Bulletin, Dec. 29, 1892. v. 4, art. 14, p. 199-243, 4 maps on plates 5-8)

Contains an introductory discussion (p. 199-212) of the influences determining the geographic distribution of life, interrelation of land areas, their systematic classification, primary life regions and genera of land mammals of the north temperate realm. The distribution of North American mammals is dealt with in the major faunal areas of the continent, among them the American Arctic (p. 219-20), divided into Barren Ground fauna and Alaskan arctic fauna; and the North American region (cold temperate subregion), subdivided into Hudsonian, Canadian, Sitkan and Aleutian faunas (p. 221-30); their nomenclature and history are noted and discussed.

Copy seen: DLC; MH-Z.

33218. ALLEN, JOEL ASAPH, 1838-1921. The geographical origin and distribution of North American birds, considered in relation to faunal areas of North America. (Auk, 1893. v. 10, no. 2, p. 97-150)

The first part of this paper (p. 96-117) deals with probable geographic origin and present distribution of the genera of birds represented in North America. The second relates to the subdivision of the continent into faunal areas of various grades; with lists of 79 distinctively arctic species (p. 123-24) including some of circumpolar distribution, and 213 distinctively cold temperate species and forms (p. 125-27); data on classification and nomenclature, and (p. 150) a tabular synopsis of the faunal areas of North America.

Copy seen: DLC; MH-Z.

33219. ALLEN, JOEL ASAPH, 1838-1921. Murdoch on the birds of Point Barrow, Alaska. (Auk, Jan. 1886. v. 3, no. 1, p. 122-24)

Contains a summary of the section in John Murdoch's *Report of the International Polar Expedition to Point Barrow, Alaska*, 1885 (Arctic Bibliography, No. 11878), which included field notes on 54 species of birds and detailed descriptions of the rare *Rhodostethia rosea* (Ross's gull). The king eider (*Somateria spectabilis*) and pectoral sandpiper (*Tringa maculata*) are said to be very abundant species.

Copy seen: DLC; MH-Z.

33220. ALLEN, JOEL ASAPH, 1838-1921. Nest and eggs of the Alaskan wren.

(Nuttall Ornithological Club. Bulletin, 1877, v. 2, no. 3, p. 82)

Brief note on a nest and two eggs of *Troglodytes parvulus* var. *alascensis* collected by W. J. McIntyre in June, 1876, on St. George Island, in the Pribilofs.

Copy seen: DSI; MH-Z.

33221. ALLEN, JOEL ASAPH, 1838-1921. The North American species of the genus *Colaptes*, considered with special reference to the relationships of *C. auratus* and *C. cafer*. (American Museum of Natural History, New York, Bulletin, Feb. 1892. v. 4, no. 1, p. 21-44, map)

Contains a comparative study of *Colaptes auratus* and *C. cafer*, based partly on eight specimens from Alaska and nine from the Canadian Arctic; with data on relationship, specific characteristics and geographic, individual, age and seasonal variations. It is concluded that there is hybridization on a grand scale between these two species to account for the occurrence of birds presenting ever-varying combinations of the characters of the two species. Map includes range in Alaska and known breeding stations.

Copy seen: DLC; MH-Z.

33222. ALLEN, JOEL ASAPH, 1838-1921. On recent additions to the ornithological fauna of North America. (Nuttall Ornithological Club. Bulletin, 1880. v. 5, no. 2, p. 85-92)

Contains a list of 28 species and ten varieties of birds added to the ornithological fauna of North America since 1874; *Parus cinctus*, *Strix lapponica* and *Surnia ulula*, native to St. Michael, Norton Sound, Alaska, and *Larus canus* from Labrador, are included.

Copy seen: DSI; MH-Z.

33223. ALLEN, JOEL ASAPH, 1838-1921. Republication of descriptions of new species and subspecies of North American birds. (Auk, Oct. 1899, v. 16, no. 4, p. 338-50)

Among the 17 forms described are a few from the North: *Canachites canadensis labradorius* (type locality, Rigoulette, Hamilton Inlet, Labrador), *Haliaeetus leucocephalus alascanus* (type, Unalaska Aleutian Islands, Alaska), and *Dendroica coronata hooveri*, (breeding probably in British Columbia and Alaska).

American birds, no. 2. (Auk, Apr. 1901. v. 18, no. 2, p. 172-79)

Fifteen new forms originally described in 1900 are republished, at least six of the species, native to Alaska and northern Canada.

Copy seen: DSI; MH.

33225. ALLEN, JOEL ASAPH, 1838-1921. A review of some of the North American ground squirrels of the genus *Tamias*. (American Museum of Natural History, New York. Bulletin, 1890-91, pub. May-July, 1890. v. 3, no. 1, p. 45-116, diagr.)

Includes a description of the Siberian chipmunk, *Tamias asiaticus* (p. 71-72), with synonyms, measurements, critical notes and data on distribution. This species inhabiting the U.S.S.R. from the east coast westward to the White Sea and Northern Dvina River, differs markedly from any of the American forms; also it is separated from them geographically by a wide area in northwestern North America, where no form of *Tamias* occurs.

33226. ALLEN, LEROY D. Constant compass heading for great circle navigation and the N-1 Compass System. (Navigation, Sept. 1953. v. 3, no. 9, p. 325-33, 10 illus. and diagrs.)

Contains description of the components and operating principles of the Kearfott Company's N-1 Compass System used for high-speed polar navigation. The system can be referenced to any arbitrarily selected grid, is practically drift-free in indication, and will maintain its grid direction relative to the pre-selected grid datum. It consists of six main components: (1) directional gyro, (2) amplifier, (3) master indicator, (4) magnetic direction-sensing device, (5) a V-8 and V-7A repeater indicator, and (6) slaving control. The directional signal may be used to control other equipment. Use of the system both for latitude corrected directional gyro operation and as a magnetic compass in lower latitudes is described. Problems of making good a great circle course are discussed. Included are illustrations show-

ing various components and their dimensions, as well as schematic diagrams of operational principles.

33227. ALLEN, WILLIAM H. Annotated bibliography of materials relating to polar navigation. Air University. Maxwell Air Force Base, Alabama, Feb. 1950. iv, [4], 70 p. (U. S. Arctic, Desert, Tropic Information Center. ADTIC Pub. No. A-100, Project 402) Mimeographed.

Contains annotated references to papers dealing with polar navigation published since 1944. Materials concerning phases of navigation not peculiar to polar regions, but essential for successful operation there are included, as well as such subjects as terrestrial magnetism and refraction. "Section I lists nine publications intended to give a comprehensive picture of polar navigation for those whose reading time is limited. Section II, the master bibliography, contains 368 titles which are listed by the author whenever possible. Section III consists of 18 sub-bibliographies designed to serve as an index to the main bibliography and an aid to finding materials on a particular subject. Section IV is a list of periodicals of interest to polar navigators."

period in nerve. (Journal of physiology, 1930, v. 69, p. 60-66, fig.) 23 refs.

Contains a study of the effect of temperature on the absolute refractory period of the sciatic nerve in *Rana esculenta*. The temperature range studied was 9° to 27° C. The curve obtained within this range was approximately exponential.

Copy seen: DSG.

33234. AMERICAN AVIATION. Russia basing diesels within reach of U. S. (American aviation, Oct. 11, 1954, v. 18, no. 10, p. 29-30)

Contains description of buildup of Russian long-range reconnaissance units equipped with specially modified versions of the Mi-13 R D and the Tupolev Tu-4 bombers. Both planes are powered by diesel engines giving them a range of almost 9,000 miles. Eight bases have been built on Sakhalin Island possibly in order to use the jet stream for reconnaissance missions to the U. S. Other squadrons are based at Anadyr', Arkhangel'sk or Amderma, Kamchatka Peninsula, and the New Siberian Islands. Various flight refueling systems are being experimented with, as well as flying-boat developments.

Copy seen: DLC.

33235. AMERICAN AVIATION. USAF reveals new navigation system: Navarho, now in development, will be urged as standard global system; first trials due in 1955. (American aviation, Apr. 12, 1954, v. 17, no. 23, p. 37-38)

Contains brief description of Navarho, a new U. S. long distance navigation system being urged for eventual adoption by ICAO. Navarho is a rho-theta navigation system operating in the 90-110 kilocycle band. It has a range of about 2,000 nautical miles over land and 2,600 over water; it will give the pilot his fix in latitude and longitude, distance to destination, and course to fly. Only 50 stations would be needed for worldwide coverage, each installation serving an estimated 20-million-square-mile area. Costs are indicated. Main advantages of Navarho over Consul and Loran systems are its longer range, ability to provide global coverage, and the fact that it provides 360° coverage from a single ground station. The system would offer advantages to polar flying.

Copy seen: DLC.

33236. AMERICAN AVIATION. What does Russia have?; though lacking long-

range strategic missiles, there's a rebirth of interest in Moscow. (American aviation, Oct. 25, 1954. v. 18, no. 11, p. 33-34, 36-37; illus. map, diagrs.)

Contains an appraisal of the status of Soviet missiles and a brief history of its development. Launching platforms for long-range rocket missiles have been constructed along the polar sea, Taymyr Peninsula, Chukotsk Peninsula, near Anadyr', and on the Kamchatka Peninsula. A testing site for rocket missiles exists on Kolguev Island in the Barents Sea; and a number of launching sites have been constructed in the Baltic region. A detailed map showing Russian concentrations of missile production, testing, and related activity is included.

Copy seen: DLC.

33237. AMERICAN CITY. Anchorage, Alaska, looks at its parking. (American city, July 1954. v. 69, no. 7, p. 141, illus.)

Contains note on a business-by-business, office-by-office survey of the business district made by the city of Anchorage. Survey showed 3,715 persons employed in the downtown area and need for total of 1,635 parking spaces. Problems are briefly discussed.

Copy seen: DGS.

33238. AMERICAN CITY. Anchorage annexes 3½ square miles. (American city, June 1954. v. 69, no. 6, p. 116)

Contains note on official annexation in Mar. 1954 of a three and one-half sq. mi. area by the city of Anchorage. Road maintenance, police and fire protection, zoning codes, etc., were extended to the region.

33239. AMERICAN HELICOPTER. Canadian surveyors use two copters in Labrador. (American helicopter, Aug. 1954. v. 35, no. 9, p. 3)

Contains brief report of the use of two Model 47 G Bell helicopters by topographic survey teams of Canada's Dept. of Mines and Technical Surveys in Labrador. The planes were purchased by Kenting Aviation of Oshawa; they surveyed more than 57,000 square miles of land in 14 weeks. Their latest assignment consisted of carrying men and

equipment to a site near Knob Lake, Labrador, location of Iron Ore Co. of Canada mines. *Copy seen:* DLC.

33240. AMERICAN HELICOPTER. Piasecki H-21 work horses undergo tests at Thule AFB. (American helicopter, Feb. 1954. v. 33, no. 3, p. 4)

Contains brief report of a suitability test program for two Piasecki H-21 helicopters at Thule Air Force Base, Greenland, to determine their value in arctic rescue and transport missions. Several successful landings and take-offs atop an ice cap 20 miles from Thule at an elevation of 2,700 ft. were reported. Further exhaustive tests are planned.

33241. AMERICAN MEDICAL ASSOCIATION. JOURNAL. Cold injury. (Its: Journal, Sept. 4, 1954. v. 156, no. 1, p. 44-45) 6 refs.

General article on frostbite, its pathology, individual differences in susceptibility; value of therapy; sympathetic intervention, rewarming, anticoagulants, vasodilators, etc. *Copy seen:* DSG.

33242. AMERICAN MEDICAL ASSOCIATION. JOURNAL. Hypersensitivity to cold. (American Medical Association. Journal, May 29, 1954. v. 155, No. 5, p. 532-33)

Contains answers to an inquiry about a case, male, 35 years, with cold sensitivity of his feet having increased to such a degree that he cannot swim in the ocean even in the summer. Causes, pathology and therapy are discussed.

Copy seen: DLC.

33243. AMERICAN MEDICAL ASSOCIATION. JOURNAL. Hypothermia. (American Medical Association. Journal, Apr. 10, 1954. v. 154, no. 15, p. 1278-79) 8 refs.

Contains a review of the main pioneering works in the use of general hypothermia as treatment of neoplasms and as a form of anesthesia in surgery, especially in that of the heart. Some animal experiments are also discussed.

Copy seen: DLC.

33244. AMERICAN MEDICAL ASSOCIATION. JOURNAL. Hypothermia for amputation. (American Medical Association. Journal, Apr. 10, 1954. v. 154, no. 15, p. 1318)

Contains an answer to an inquiry to "explain the method of freezing an ex-

tremity for amputation." A description of the cracked ice method and of a refrigeration blanket or coil is given, with notes on duration of cooling, use of tourniquets, merits of the method, etc.

Copy seen: DLC.

33245. AMERICAN METEOROLOGICAL SOCIETY. Cumulative list of translations made by the American Meteorological Society translating unit, 11 January, 1952-31 December, 1953. Boston, Mass., 1954. 26 p. Mineographed. Supplements: no. 1, Jan. 1-Mar. 31, 1954, 6 p.; no. 2, Apr.-June 30, 1954, 8 p.; no. 3, July 1-Sept. 30, 1954, 7 p. Translations (134) from Russian, French, German, Greek, Hungarian, Italian, and Spanish are listed alphabetically by author. Arctic material is included. Nine rough translations on magnetic recording tape, and Russian periodicals abstracted are also noted. Supplements list 98 complete translations prepared by the Society, the Defence Research Board of Canada, or the Snow Ice and Permafrost Research Establishment (U. S. Army Corps of Engineers); and 24 more translations on tape. **Copy seen:** CaMAI.

33246. AMERICAN METEOROLOGICAL SOCIETY. I.C.A.O. revises ocean weather ship program. (American Meteorological Society. Bulletin, Mar. 1954. v. 35, no. 3, p. 125.)

*Contains note based on article in the New York Times, Mar. 2, 1954. The agreement reached during the International Civil Aviation Organization conference on North Atlantic weather stations (Paris, Feb. 9-25, 1954) calls for nine stations manned by 21 ships, after June 30, 1954 (for 2-year period). North American countries will operate four stations, and U. S. will provide 11 ships. Allocation of costs is briefly discussed. The nations participating in the program are: Canada, Denmark, France, Ireland, Israel, Italy, the Netherlands, Norway, Sweden, Switzerland, United Kingdom, and United States. **Copy seen:** DGS.*

Title tr.: Suggestions for town planning in West Greenland. *Other authors:* P. Lyager, M. Boertmann, and F. Teisen.

Contains report prepared for the Greenland Dept. of the Danish Government, based on investigations made during 1950-1951 as result of study of the 1949 Report on Greenland (*Arctic Bibliography*, No. 2367); suggestions made reflect viewpoint of the planning group. Physical geography, economic conditions (sealing, fisheries, etc.), agriculture, and population of West Greenland are summarized, each coastal region is briefly described, and predictions of migrations and future concentration of population are made. Housing conditions and towns in 1950-1951 are described. Problems of each of the four regions are dealt with in some detail: Narssaq (Narssarsuaq, 61°15' N. 45°30' W.), Godthaab (64°11' N. 51°43' W.), Sukkertoppen (66°10' N. 64°45'-52°30' W.), and Egedesminde (67°30'-69° N. 52°30' W.). Construction and harbor possibilities, industries and technology, institutions, living conditions, fisheries, agriculture, sheep-farming, etc. are discussed, with maps, charts, and graphs showing present conditions and suggested stages of planning.

33254. ANDERSON, E. W. Principles of air navigation. London, Methuen & Co. Ltd., [1951] xiii, 264 p. 160 diagrs. by the author.

Author's aim is to provide the necessary theoretical background for the practical aviator with only essential mathematical details, and to set out the principles basic to maps and charts, navigational instruments, and the radio and radar aids to navigation. The book is in five main sections, the writer dealing in turn with: physics, equipment, flight planning, position finding and, generally, air navigation. Finally he illustrates how navigational technique must be modified to suit particular occasions. Characteristic views concerning polar, long-range, high-speed and short-range navigation are presented, and reference is made to specific page and paragraph in the preceding exposition, where each is treated in detail. An index, including terms in common use by air navigators, is appended.

33261. ANDREEV, ALEKSANDR IG-NATEVICH, 1887- . Zametki po istoricheskoi geografii Sibiri XVI-XVIII vv. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1940. t. 72, vyp. 2, p. 152-57, facsim.) 8 refs. Text in

Russian. *Title tr.:* Notes on the historical geography of Siberia in the 16th-18th centuries.

Two manuscripts in the archives of the Russian Geographical Society are described with comment on their content. One of about A. D. 1693 deals with the routes and traveling conditions in the Pechora region (from Vym to Berezovo) and foundation of the city of Pelym by Prince P. I. Gorezhakov. The other ms., written in 1741-1743, by I. A. I. Lindenau who was translator with Bering's Great Northern Expedition, gives a geographic description of the Anadyr' River basin, notes on the Chukchis, their territory, relations with Russians, and on the subjugated (taxed) Koryaks. A part of this ms., "Opisanie o chukofskoi zemli, gde onaŭ imeetsja" (Description of Chukotsk land and where it is) is quoted here in full (p. 156-57). It tells of where the Chukchis and Koryaks live, and what they do, particularly of the Chukchis traveling to Alaska (Bol'shaya Zemlya) to trade, and bringing back wooden utensils.

33270. ANISIMOV, A. F. Kul't medvedia u evenkov i problema evolutsii totemisticheskikh verovanii. (*In:* Akademiia nauk SSSR. Institut istorii. Voprosy istorii religii i ateizma; sbornik statei. Moskva, 1950. p. 303-323) about 50 refs. Text in Russian. **Title tr.:** The bear cult among the Tungus and the problem of the evolution of totemistic beliefs.

Contains description and interpretation of Tungus hunting customs and "bear festivals," observed by the writer in 1929-1931, among the Tungus of the Podkamennaya Tunguska River, in the Baykit and Chuna districts of Krasnoyarskiy Krai. The rites observed after killing a bear and dramatic performances for three days ending with "burial of the bear" are described. Parallels with other peoples (Voguls and Ostyaks, Gilyaks and Ainu) are given; the origin of the ritual, its relation with the rites of a clan totemistic society, the influence of ideas typical for a transitional period from matriarchal to patriarchal order are discussed. Being inclined to the totemistic explanation of the bear rites, the author considers also relations of the bear cult with animistic or shamanistic ideology and the cult of ancestors.

vetskoe kraevedenie, Nov. 1936, no. 11, p. 39-62, ports., illus.) Text in Russian. **Title tr.:** Polar main line; 20th anniversary of the Kirovsk (formerly Murmansk) railroad.

Popular sketches of the history of the Murmansk railroad: its hurried construction in 1916 as a military necessity; failure in an attempt to use Canadian workers on the northern section; hardships of the work, the cruelties perpetrated upon German and Austrian prisoners-of-war, Chinese and Russian workers engaged in the construction; the defects of the road at the beginning of its operation; British agents' attempt to purchase the Kola Peninsula, and military intervention of the Allies in 1918; reconstruction of the railroad by the Soviets and its partial electrification, etc. The tremendous industrial and cultural development of Kola Peninsula and Murmansk are sketched, partly in semi-fictional form. The apatite resources in Khibina (500 million tons), 1935 production (1,550,000 tons), and planned production of 2,200,000 tons for 1936 and 4 million tons by 1939 are mentioned. Anecdotes of individuals' achievements, about S. M. Kirov, and some of the railroad men are reported.

33277. ANTROPOVA, V. V. Lyzhi narodov Sibiri. (Akademiia nauk SSSR. Muzei antropologii i etnografii. Sbornik, 1953, t. 14, p. 5-36, 32 illus.) 10 refs. Text in Russian. **Title tr.:** Skis of the peoples of Siberia.

Descriptive study based on material in the Museum of Anthropology and Ethnography of the Academy of Sciences in Leningrad, and on literature. Different forms of skis and snowshoes, their native names, material; attachment to

the foot, staff, fur padding, etc., are discussed. There are skis for walking and for sliding, for everyday use and especially for hunting, of straight and convex form. References are made to the skis of the following peoples: Asiatic Eskimos, Ainu, Chukchis, Goldi, Buryats, Koryaks, Kamchadals, Yukaghirs, Yeniseians, Samoyeds, Tungus, Yakuts, Ostyaks, Voguls, Russian settlers of Siberia, and various Altaic peoples. Skis are of greatest importance to hunting peoples, and of little among cattle breeders. Prehistoric skis have not been found in Siberia, but they appear in historical sources from the seventh century. Ethnic origins of various types of skis are merely touched in a few occasional remarks.

33278. ANTROPOVA, V. V. Sovremennaiā chukotskaia i ēskimoskaia reznaiā kost'. (Akademiā nauk SSSR. Muzei antropologii i ētnografii. Sbornik, 1953. t. 15, p. 5-96, 41 text illus., 20 plates incl. 6 fold.) 8 refs. Text in Russian.

Title tr.: Ivory carving of the present-day Chukchis and Eskimos.

Contains a short review of traditional art of Chukchis and Eskimos in the past and a detailed description of a large collection (352 artifacts) of carvings on walrus tusks, made in 1945-1949 in a workshop at Ulen. The collection was acquired, in 1951, by the Museum of Anthropology and Ethnography in Leningrad and consists mostly of objects for practical use: paper knives, pen holders, cigaret holders and pipes, powder and trinket boxes, combs, chessmen, etc.; however, 45 engraved tusks and 66 sculptured figurines (animals, idols) were included. Some 150 of these objects are shown in illus. The carvers are provided with modern tools and guidance; they were taught a new technique of flat-relief and bas-relief carving (originally the natives knew only engraving and sculpture). The pictures show scenes of indoor and outdoor native life: sea hunting, fishing, reindeer breeding (a popular theme of Chukchis) and other daily work, dwellings, means of communication, clothing, dances and games, themes from native folklore (illustrations of tales), scenes of modern life (balloting, recreation in a club), etc. The high artistic value of these carvings is stressed.

33279. ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923. O primēnenii fonografa k ētnografii i v chastnosti o zapisi shaman'skago kamlan'ia v Sredne-Kolym'skie, Ākut'skot oblasti. S prilozheniem Ākut'skikh pīsen po fonograficheskim zapisaiam Ā. Storozhefskago, sniatykh s valikov A. L. Maslovym. (Obshchestvo lūbitelei estestvoznaniia, antropologii i ētnografii, Moskva. Izvēstīia, 1911. t. 114, p. 271-97, 9 illus., 4 plates of musical examples.) Text in Russian.

Title tr.: On the use of the phonograph in ethnography and, in particular, the recording of a shamanistic performance in Sredne-Kolym'sk, Province of Yakutia. With a supplement of Yakut songs, recorded by phonograph by Ā. Storozhefskii, transcribed from the cylinders by A. L. Maslov.

Contains an account of how Storozhefskii succeeded in 1903 in making phonograph records of some songs from Russian old settlers, and of a Yakut shamanistic performance from Feodor Vinokurov, a shaman's helper. Sredne-Kolym'sk, its inhabitants, their occupations are described, especially the Yakuts, their language and folklore, with details on Yakut shamanism given from Storozhefskii's notes. Yakut songs and music are characterized by D. N. Anuchin, and A. L. Maslov remarks upon the difficulty, the impossibility sometimes, of transcribing Yakut singing into musical notes. Texts of nine Russian and seven Yakut songs (four shamanistic incantations, one heroic, one kumiss, and one Yakut adopted by the Russians) are given, with music notes for eight Russian and four Yakut songs. Illustrations refer to shamanism and music.

ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923, see also Anuchin, V. I., and N. A. Sinel'nikov. Eniseiskie ostiaki; ... 1911. No. 33280.

33280. ANUCHIN, VASILII IVANOVICH, 1875- . and N. A. SINEL'NIKOV. Eniseiskie ostiaki; po nablūdeniām i izmēreniām V. I. Anuchina, obrabotannym N. A. Sinel'nikovym; pod redaktsiei prof. D. N. Anuchina. Moskva, 1911. iv, 29 p., tables, curves, 13 illus. (Obshchestvo lūbitelei estestvoznaniia, antropologii i ētnografii, Moskva. Izvēstīia, t. 124, vyp. 1. Antropologicheskii otdel. Trudy, t. 28, vyp. 1) Text in Russian. **Title tr.:** The Yenisey Ostyaks; based on investigations and measurements by V. I. Anuchin, worked up

by N. A. Sinel'nikov. Edited by Prof. D. N. Anuchin.

A monograph on the physical anthropology of Yeniseians, based on measurements of 104 individuals, taken in 1905-1906 in the district of Turukhansk. An introduction sketches the history of this people since their contact with Russians, their number and territory, occupation (hunting and fishing), food and dwellings, poor health conditions (trachoma, rickets and rheumatism are common), marriage, religious beliefs and folklore. The Yeniseians' cultural and biological degeneration is evident. The anthropological part gives evaluation of data on color of eyes and hair, height, form of head, face, nose, ears, etc. Indexes, mean measures, etc. are supplied. Two racial types of Yeniseians are indicated: one Turcic-like, the other Aryan-like. The field work was sponsored by the Moscow Society of Natural History, Anthropology and Ethnography, and the measurements are not all completely dependable, editor states, due to V. I. Anuchin's lack of experience.

33281. AOKI, KIYOSHI. Bareishō konkei no sai-tōketsu kyokusen no kata ni tsuite. (Teion kagaku [Low temperature science], Tokyo, 1950. v. 3, p. 209-217, illus) Text in Japanese. Summary in English. **Title tr.:** On the shape of the refreezing curve of the potato tuber.

Contains account of an investigation on the effects of the cooling rate of initial freezing upon the refreezing curve of potato tubers. No "clear changes" appeared in the shapes of refreezing curves following various rates of initial freezing and thawing. The causes of this unexpected behavior are discussed.

Copy seen: DLC.

33282. AOKI, KIYOSHI, and J. SHINOZAKI. Iraga zenyō no kareikyaku ni oyobosu reikyaku sokudo no eikyō. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p. 109-116, 4 fig.) 13 refs. Text in Japanese. Summary in English. **Title tr.:** Effect of cooling rate on the undercooling points of the prepupa of the slug moth.

No definite relation was found to exist between the cooling rate and the under-

cooling points of the prepupa. However, the undercooled state becomes unstable with increasing rate of cooling, and freezing frequently occurs at higher undercooling temperatures.

Copy seen: DLC.

33283. AOKI, KIYOSHI, and J. SHINOZAKI. Iraga zenyō no kareikyaku ni tsuite. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p. 103-108, fig., 4 tables) 8 refs. Text in Japanese. Summary in English. **Title tr.:** On the undercooling of the prepupa of slug moth.

The "undercooling points" in the moth *Cnidocampa flavesceus* were found to exhibit only relatively small deviations under any definite cooling condition. A certain periodicity, however, occurs in the undercooling points: they are high in the larva (summer), drop sharply after cocooning (fall), reach a minimum in the winter, and rise again before pupation (early summer). This periodicity is also exhibited by the blood.

Copy seen: DLC.

33284. AOKI, KIYOSHI. Seibutsu no tōketsu katei no bunseki, I. Shokubutsu soshiki no tōketsu kyokusen no kata to tōketsu yōshiki to no kankei. (Teion kagaku [Low temperature science], Tokyo, 1950. v. 3, p. 219-226, fig.) Text in Japanese. Summary in English. **Title tr.:** Analysis of the freezing process of living organisms, 1; the relation between the shape of the freezing curve and the mode of freezing in plant tissues.

Contains a study on the relation between shape of the freezing curve (Temperature-Time curve) and mode of freezing in tissues of ten vegetables. Three fundamental types of tissue freezing are distinguishable from the character of the curves.

Copy seen: DLC.

33285. AOKI, KIYOSHI. Seibutsu no tōketsu katei no bunseki, III. Shokubutsu soshiki no tōketsu kyokusen-jō no futatsu no hyōten. (Teion kagaku [Low temperature science], Tokyo, 1948. v. 4, p. 65-77, 3 fig.) 12 refs. Text in Japanese. Summary in English. **Title tr.:** Analysis of the freezing process of living organisms, 3; two freezing points on the freezing curve of plant tissues.

"The nature of the dual freezing point in living plant tissue was studied with special attention focused on the mode of freezing. The measurement of temperature change during freezing was made

with a thermocouple at 15-sec. intervals. The first freezing point involves the freezing of the surface layer and may be imperceptible or exaggerated by condensation or dilution of the cell sap. The second freezing point involves the freezing of the inner tissues. This freezing point is almost indistinguishable when the inner tissue is highly susceptible to freezing and distinct when the inner tissue is difficult to freeze. Dead tissue produces a single freezing point. (Abstract by Ukitirô Nakaya)"—SIPRE. **Copy seen:** DLC.

33286. AOKI, KIYOSHI. Seibutsu no tōketsu katei no bunseki, IV. Shokubutsu tōketsu kyokusen bunseki no ichi hōho. (Teion kakagu [Low temperature science], Tokyo, 1948. v. 4, p. 79-83, 2 fig., table) 5 refs. Text in Japanese. Summary in English. **Title tr.:** Analysis of the freezing process of living organisms, 4; a method of analysis of the freezing curve of plant tissues.

The angle following the first freezing point on the curve was found to be intimately correlated with the freezing of the cell sap in the intercellular spaces; that following the second freezing point is determined by the velocity of ice formation within the cells. The straight part of the graph indicates "the supercooling grade of the inner living cells."

33291. APPALACHIA. Mt. McKinley by the south buttress. (Appalachia, Dec. 1954. v. 30, no. 2 (new ser., v. 20, no. 12), p. 255-56)

Contains note on ascent of the south summit of Mt. McKinley, Alaska, by the south buttress route proposed by Bradford Washburn, q. v. The four-man party led by E. Thayer reached the summit May 15, 1954. Thayer was killed and G. Argus injured during the descent. Note by F. Beckey is appended, on first ascent of Mt. Drum (62°08' N. 144°29' W.) in the Wrangell Mts. by a three-man group, June 1954.

Copy seen: DGS.

33292. APPALACHIA. A scientific observatory. (Appalachia, Dec. 1953. v. 29, no. 4 (new ser., v. 19, no. 12), p. 601-602)

Contains note on establishment of a cosmic ray observatory on the summit plateau of Mt. Wrangell, Alaska (62° N. 143° W.), in summer 1953, by New York University and University of Alaska. Administrative head of the expedition was Dr. Terris Moore, scientific head

was Dr. Serge Korff. Equipment was dropped on the summit by U. S. Air Force; passengers were flown in by Dr. Moore. **Copy seen:** DGS.

33293. APPLEMAN, H. The cause and forecasting of ice fogs. (American Meteorological Society. Bulletin, Nov. 1953. v. 34, no. 9, p. 397-400, 2 graphs) 4 refs.

Studies in Alaska and northern Canada have shown that ice fogs are dependent on low temperatures and proximity to inhabited areas. Reason for sudden increase in fog frequency at temperatures below about -30° C. and rarity or lack of fog at higher temperatures is discussed, with reference to a recent study on aircraft condensation trails. The study showed that the burning of hydrocarbon fuels, as occurs around towns or airfields, results in supersaturation of the air at temperatures of between -20° and -40° C. (depending upon the relative humidity of the atmosphere). Conversely, at higher temperatures combustion reduces relative humidity, hindering formation of fog. Breathing by men and animals also contributes to fog (fog steaming). Fog forecasting is discussed, and graphs show temperature-dew point relationship necessary for ice-fog formation. **Copy seen:** DGS.

33294. ARAKAWA, H. Zonal wind-profile between the pole and the equator given by a single expression. (Archiv für Meteorologie, Geophysik und Bioklimatologie, 1952. Ser. A, v. 5, no. 2, p. 129-35, graph) 11 refs. Text in English. Summary in English, German and French.

The annual mean zonal winds over the earth are expressed in a single equation, rather than for the polar and equatorial regions separately. Computations yield good agreement with observations concerning latitudinal variation of the zonal winds. **Copy seen:** DLC.

33295. ARCHIV FÜR WISSENSCHAFTLICHE KUNDE VON RUSSLAND. Der Handel der Tschuktschen mit den Russen und den Insebewohnern des Nordöstlichen Ozeans. (Archiv für wissenschaftliche Kunde von Russland, 1855. Bd. 14, p. 202-211) From *Moskovskii vëdomosti*. Text in Ger-

man. **Title tr.:** Chukchi trade with the Russians and the islanders of the northeastern Pacific.

Contains detailed description of this trade and the yearly fairs at Ostrovnoye and Gizhiga; also the market on Imaklit Island (Big Diomedé) where Chukchis passed on Russian wares to the inhabitants of King and Sledge Islands. Trade was still carried on by dumb show between Chukchis and natives of St. Lawrence Island. **Copy seen:** DLC.

33296. ARCTIC. Expeditions to north Ellesmere Island. (Arctic, June 1954. v. 7, no. 1, p. 55-56)

Contains note on glaciological and geological investigations carried out by G. Hattersley-Smith and R. G. Blackadar, Apr. 21-Aug. 16, 1953, on the Ellesmere Ice Shelf and the United States Range. Presence of highly metamorphosed strata and of granitic rocks on the northernmost coast has been established. Three orogenic disturbances probably occurred in the region between early Silurian and Tertiary time. On Apr. 24, 1954, a joint Canadian-U. S. scientific party of four, led by Hattersley-Smith, arrived on the ice shelf to continue the field work. **Copy seen:** CaMAI; DLC.

33297. ARCTIC. Position of ice island T-1. (Arctic, June 1954. v. 7, no. 1, p. 51)

On Apr. 30, 1954, T-1 was seen about seven miles north of Cape Stallworthy (northern tip of Axel Heiberg Island). It has moved southwest about 110 miles from its position at the entrance to Yelverton Bay (northwest coast of Ellesmere Island) in Apr. 1953.

Copy seen: CaMAI; DLC.

33298. ARCTIC. Scientific program at the Arctic Research Laboratory, Point Barrow, Alaska. (Arctic, June 1954. v. 7, no. 1, p. 51)

Contains note on assumption of responsibility by the Arctic Institute of North America for the scientific program at the Arctic Research Laboratory. Northern engineering, communications, public health and other research will be carried out under guidance of a committee of the Institute headed by H. M. Raup, and coordinated by J. T. Flakne. **Copy seen:** CaMAI; DLC.

33299. ARCTIC CIRCULAR. Army exercises in the North, 1953-54. (Arctic circular, Dec. 1954. v. 7, no. 4, p. 54-55)

Contains notes on Canadian Army - Air Force winter exercises: Bull Dog, near Fort Churchill, Manitoba, Feb. 15-Mar. 1, 1953; Loup Garou, in the Seven Islands region, Quebec, Feb. 18-Mar. 1, 1954; and Bull Dog II, in the Fort Churchill region, Dec. 1-14, 1954.

Copy seen: CaMAI; DLC.

33300. ARCTIC CIRCULAR. Army operations in the North. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 51-52)

Contains note on work done during 1953 toward complete map coverage of northern Canada at scale 1:250,000. Shoran-controlled air photographs were flown over 130,000 square miles north of Great Slave Lake. Vertical control was provided by altimeter elevations based on levelling carried out in winter 1952-53, by helicopter landings in summer 1953, and by a level line run 240 miles from Great Slave Lake to Great Bear Lake and Ft. Norman. Great Bear Lake was found to be approximately 513 ft. above mean sea level.

Copy seen: CaMAI; DLC.

33301. ARCTIC CIRCULAR. Canadian Weatherfax System. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 20-21)

This system, started Aug. 28, 1953, permits weather maps to be transmitted from the Central Analysis Office at Dorval, Quebec, to R. C. A. F. stations across Canada within a few minutes. Maps for Frobisher are transmitted via Montreal and Goose Bay. Development of the system from the late World War II period is described.

Copy seen: CaMAI; DLC.

33302. ARCTIC CIRCULAR. The Dept. of Northern Affairs and National Resources. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 15)

On Dec. 16, 1953, this name was adopted for the former Canadian Dept. of Resources and Development, and wider powers were assigned to the new department: coordination of federal government activities in the Northwest Territories and Yukon Territory; fostering of knowledge of the Canadian North; and dealing with conditions related to its further development. The reestablishment of the Advisory Committee on Northern Development is noted.

Copy seen: CaMAI; DLC.

33303. ARCTIC CIRCULAR. Eastern Arctic patrol, 1953. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 59-61)

The *C. D. Howe* and the ice-breaker *d'Iberville* took part in the 12,000 mile patrol during June-Sept. The former visited the Ungava posts, Churchill, Coral Harbour (Southampton Island), Nottingham Island, and Craig Harbour (Ellesmere), where she met the *d'Iberville*. The *d'Iberville* went up the Labrador coast, north to Pond Inlet (Baffin Island), Resolute Bay (Cornwallis Island), and Craig Harbour (Ellesmere), returning by Baffin Island. Government, medical, and administrative personnel are noted and a brief outline of work of the patrol is given.

Copy seen: CaMAI; DLC.

33304. ARCTIC CIRCULAR. Eskimo identification discs. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 61)

Contains note on numbered discs first issued to all Eskimos in the Canadian Arctic at the 1941 census. In 1946 new discs showing registration district as well as number were issued; thus information on movements of the population can be obtained.

Copy seen: CaMAI; DLC.

33305. ARCTIC CIRCULAR. Loss of the "Icehunter." (Arctic circular, Nov. 1953. v. 6, no. 5, p. 61-62)

Contains brief note on loss of the *M. V. Icehunter*, a small Newfoundland cargo vessel. The ship went aground and broke up on Bowell Island while en route from Chesterfield to Baker Lake (Keewatin District) on Aug. 10, 1953.

Copy seen: CaMAI; DLC.

33306. ARCTIC CIRCULAR. Migration of Eskimo to the far northern islands. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 52-53)

In summer 1953, ten Eskimo families from Port Harrison (Northern Quebec) and Pond Inlet (Baffin Island) were moved to Resolute Bay (Cornwallis Island) and Craig Harbour (Ellesmere). The transfer was organized by the Canadian Dept. of Resources and Development to ascertain if the Eskimo can successfully repopulate regions which once supported a native population. The R.C.M.P. is responsible for the natives.

Copy seen: CaMAI; DLC.

33307. ARCTIC CIRCULAR. The Mint Julep glaciological project. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 19-20)

In spring 1953 an American Geographical Society 17-man party of scien-

tists and support personnel established a glaciological research station at 6,000 ft. on the Greenland Icecap about 100 miles southeast of Søndre Strømfjord (66°04' N. 53°18' W.). The Project, led by L. R. Wilson, was supported by the U. S. Air Force, Arctic, Desert, Tropic Information Center and Northeast Command. Research on surface and subsurface features of the icecap near the firn line was carried on, May-Aug., with special studies on topography, hydrology, physical properties of snow and ice, and weather. Scientific personnel are listed. Final report is in preparation by Arctic, Desert, Tropic Information Center, Maxwell Air Force Base, Alabama.

33311. ARCTIC CIRCULAR. Police patrols to Axel Heiberg and Devon Islands. (Arctic circular, Mar. 1954. v. 7, no. 3, p. 34-36)

Account of two sledge patrols made in spring 1953 by R. C. M. P. from Craig Harbour (Ellesmere Island) to study game and travel conditions: the first, north to Eureka Weather Station, Nansen Sound, and Schei Peninsula on northwest Ellesmere and northeast Axel Heiberg Islands and return Apr. 11-May 21, covering 1,158 miles; the second, along Jones Sound to Cape Sparbo in northeast Devon Island June 5-11. Fifty-eight musk oxen were seen on the first trip, 44 on the second.

Copy seen: CaMAI; DLC.

33312. ARCTIC CIRCULAR. Presentation of Coronation Medals to Eskimo. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 21-23)

Twenty Eskimos awarded Coronation Medals are named; identification number, home settlement or region, occupation and/or status in community are given for each.

Copy seen: CaMAI; DLC.

33313. ARCTIC CIRCULAR. The Queen Elizabeth Islands. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 16-19, text map)

On Feb. 5, 1954 the Canadian Arctic Islands north of Lancaster and Viscount Melville Sounds were named the Queen Elizabeth Islands. Topography is briefly described. Exploration began with William Baffin (1616?), but most extensive work was done after 1848. Three R. C. M. P. posts and five U. S.-Canadian weather stations are established in the islands.

Copy seen: CaMAI; DLC.

33314. ARCTIC CIRCULAR. S. A. S. transpolar flights. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 58-59)

Contains note on a series of test flights by the Scandinavian Airlines System with Douglas DC6B aircraft. Three flights went through Thule (June, Nov., Dec. 1952) and one through Churchill, Frobisher, and Bluie West 8 (Søndre Strømfjord), Greenland (Jan. 22, 1954). The itinerary and time schedule of the first commercial flight (June 1952), Oslo-Thule-Anchorage-Tokyo, are given.

33320. AREFEV, V. Eniseĭskie inorodtsy; populĭarnye ocherki. (Sibirskii sbornik, 1902. god 17, p. 1-40) Text in Russian. *Title tr.:* Natives of the Yenisey; popular sketches.

Contains an account of native life in the former Government of Yeniseysk before the coming of Russians and the present (1902) situation. Contact with the Russians brought diseases (the most devastating was syphilis), alcoholism, and a general impoverishment of the people from heavy taxes and the greed of merchants. Bread of poor quality, expensive and often unavailable, became a staple of diet; disease and famine en-

sued. The inner and outer culture of the following natives is sketched in considerable detail: Tungus (p. 9-28), Ostyaks (p. 28-35), Samoyeds (p. 35-38), Yakuts and Dolgans (p. 38-40).

Copy seen: DLC.

33321. A[REF'E]V, V. O proshlom i nastoiašchem angarskikh aborigenov. (Sibirskii sbornik, 1900. god 15, vyp. 1, p. 114-22) Text in Russian. **Title tr.:** On the past and present of the Angara aborigines.

Contains a review of archeological discoveries of stone and bronze age in the Angara (i. e. Verkhnyaya Tunguska) valley, the coming of Russians to the Podkamennaya and Verkhnyaya Tunguska around 1625, their wars with Tungus and Buryats and subjugation of natives, depopulation of the area by famines and a smallpox epidemic in 1850-51. Only a few scattered families of Tungus were found in the entire region in 1894, attributable, author states, to the colonial policy of native exploitation.

33323. ARGENTOV, ANDREĬ. Ocherk Nizhnekolym'skogo kraia. (Sbornik gazety Sibir', 1876. t. 1, p. 387-96) Text in Russian. **Title tr.:** A sketch of the Nizhne-Kolymsk region.

Contains an account, based on personal experiences, of the natural and living conditions for Russians and natives in this region, approx. 68° 32' N. 160° 59' E., near the mouth of the Kolyma. The climate is harsh and vegetation poor: vegetables will not grow there, though in Sredne-Kolym'sk potatoes and turnips ripen. The people live without bread or salt, chiefly on fish which is excellent. A poor fishing season on the Kolyma means famine and epidemics (chiefly typhus). Starving natives draw

three to five pounds of deteriorated flour monthly per person from the government store. The most common diseases are the periodic epidemics of measles and smallpox, typhus, syphilis, elephantia (leprosy), scurvy, and *zhiganka* (a kind of hysteria). Notes on native food, dwellings, mode of life, shamanism, etc. are included.

33324. ARIEFF, T. J. La réparation des plaies qui sont exposées à l'air froid. (Lyon chirurgical, Mar.-Apr. 1938. v. 35, p. 154-77, illus.) 34 refs. Text in French. **Title tr.:** Healing of wounds exposed to cold air.

Contains a study of adult rabbits experimentally wounded and placed under controlled conditions of temperature down to -40° C. Temperatures of the injured areas (ear, leg) are recorded and compared with the opposite, uninjured control, and with that of the body. The pathology is followed, both grossly and microscopically, with the aim of establishing the rate of healing at various ambient temperatures.

33325. ARISTOV, IŪ. V. Novye oblasti SSSR i nekotorye pereimenovaniia. (Geografiia v shkole, May-June, 1954. no. 3, p. 72-75, maps) Text in Russian. **Title tr.:** New provinces of the U.S.S.R. and some changes of names.

Announcement of the establishment, Dec. 1953-Feb. 1954, of six new administrative units, one of them, a part of Khabarovskii Kray, RSFSR, in north-eastern Siberia, is Magadanskaya Oblast' with center at Magadan (59°34' N. 150°48' E.) on the Sea of Okhotsk. From this sea, the new province extends north to the Eastern Siberian and Chukchi Seas, and from approx. 145° E. long., eastward to the Bering Sea. Besides the region between Yakutskaya A.S.S.R. and the Sea of Okhotsk, it includes the Chukotsk national district and a small thinly populated part of the Koryak National District. The main part of the latter and Kamchatka Peninsula comprise the administrative unit now designated Kamchatskaya Oblast'. Map (p. 72) shows boundaries, etc.

33326. ARMAND, D. L. Po sledam vetra; proshloe zemli pod mikroskopom. (Vokrug sveta, Oct. 1946, no. 10, p. 36-39, illus., diags., maps) Text in Russian. **Title tr.:** On trails of the wind; the past of the earth in microscope.

A popular description of fossil pollen analysis and its results: fossil pollen which may be found in many geological strata, enables the vegetation of remote periods to be investigated. Soviet scientists have elaborated methods of analysis based on rapid separation of pollen from inorganic matter by means of a solution of a compound (iodine, mercury, potassium) and a centrifuge making 3,000 r/m. Analysis of samples taken from various geological strata allows a reconstruction of the climatic conditions and distribution of vegetation over the U.S.S.R. in the corresponding periods; these data are illustrated by text maps of interglacial and recent distribution of vegetation, in a belt from Black Sea to the Kola and Kanin Peninsulas.

33327. ARMSTRONG, EDWARD E. The behaviour of birds in continuous daylight. (Ibis, Jan. 1954. v. 96, no. 1, p. 1-30, illus. tables) about 110 refs.

Contains a study of the very little known question whether the arctic and subarctic birds roost during the continuous daylight of midsummer, followed by an analysis of factors influencing their "quiescent periods." Most investigations were made between June 20 and July 7 around Abisko in northern Sweden, 68°21' N., 18°49' E. Discussion is limited mainly to the Strigiformes, Falconiformes, Charadriiformes, and Passeriformes. Reproduction and self-maintenance, light, temperature, humidity and wind, predation pressure and social factors were considered as agents influencing the "quiescent periods;" of the external factors, light appeared to be the dominant one.

33328. ARMSTRONG, TERENCE EDWARD, 1920- The Chief Administration of the Northern Sea Route. (Polar record, Jan. 1954. v. 7, no. 47, p. 72-73)

This Soviet agency (Glavnoe Upravlenie Severnogo Morskogo Puti pri Sovete Ministrov SSSR, abbreviated to Glavsevmorput' or GUSMP) was created in 1932. Although in 1936 it was responsible for the Northern Sea Route, transport, natural resources, and relations with native peoples in Asiatic U.S.S.R.

north of 62° N., its activities were curtailed in 1938. As part of a move to reduce the number of ministries, this agency, with two ministries, was placed in 1953 under the new Ministry of Sea and River Fleet. This does not necessarily mean a loss of importance.

Copy seen: CaMAI; DLC.

33329. ARMSTRONG, TERENCE EDWARD, 1920- "Ice clusters." (Polar record, July 1954. v. 7, no. 48, p. 185)

The term "ice cluster" is suggested to describe "a concentration of sea ice, covering hundreds of square miles, which is found in the same region every summer." Russian term *ledovyĭ massiv*, "ice massif," is noted.

33335. ARNOL'D, IVAN NIKOLAE-VICH. Rybnye promysly nashego severa. Moskva-Leningrad, Gosud. izd-vo, 1928. 61 p., illus., map. Text in Russian. **Title tr.:** Fisheries of our North.

Contains notes on natural conditions and development of the Soviet fisheries in the Barents and White Seas: main commercial fishes, marine and anadromous; distribution of the principal fishing grounds; implements (trawler and purse net), vessels, methods of salting and canning. In 1925, there were 3,500 fishermen on the Murman coast, and nearly 20,000 persons were engaged in the North European U.S.S.R. fisheries,

an average of seven per km. of coastline; the fishing fleet comprised 1,056 vessels, among them, however, only 35 motor vessels. The total fish and seal catch in 1926 reached 50,000 tons, barely a fifth, author claims, of the potential catch.

33359. ASMOUS, VLADIMIR C., 1891- . First Russians in America. (Russia, Feb. 15, 1946. v. 3, no. 34, p. 14-16)

Contains a review of references in Russian and American literature on early Russian settlers in Alaska. In the light of this evidence and the discovery, in 1937, of the remains of a buried village near Kasilov, on Kenai Peninsula, discussed in the paper of T. S. Farrelly, *A lost colony of Novgorod in Alaska*, 1944, q. v., the author comes to the conclusion "that the dwellers of the lost village near the town of Kasilov were men and women of Great Novgorod who escaped from their native city fearing the reprisals of Ivan the Terrible for their allegedly treacherous relations with Lithuania" (p. 16). This settlement is apparently the oldest Russian colony in Alaska, founded approximately in 1571.

33360. ASMOUS, VLADIMIR C., 1891- . Nerazluchnye druž'ia; zhizn' puteshestviia i sovmešt'naia gibel' leitenanta Khvostova i michmana Davydova. (Rossiya, 1943. v. 11, no. 2621, p. 3-4) Text in Russian. *Title tr.:* The inseparable friends

Lieutenant Khvostov and Ensign Davydov; their life, travels and common death.

Contains biographical notes on N. S. Khvostov 1776-1809, and G. I. Davydov, 1784-1809, their travels in 1802 as employees of the Russian-American Co., from St. Petersburg via Okhotsk to Kodiak Island and back to Okhotsk on the schooner *Elizabeth* with a large cargo of valuable furs. Their subsequent activities in Kamchatka and Alaska under N. P. Rezanov, Russian ambassador to Japan, raids upon Sakhalin, the Kuriles, etc., are sketched. *Copy seen:* MH-A.

33361. ASMOUS, VLADIMIR C., 1891- . Ostrov Vrangeliia i ego znachenie. (Rossiya, 1945. v. 12, no. 3171, p. 4) Text in Russian. *Title tr.:* Vrangeli Island and its importance.

The physical geography, discovery, and exploration of Vrangeli Island, and the dispute on its possession between Canada and the U.S.S.R. (1921-26) are sketched. Its importance as a potential air base and as site of a meteorological station is discussed.

33362. ASMOUS, VLADIMIR C., 1891- . Pionery Sibiri: M. M. Gedenshtrom. (Rossiya, 1946. v. 14, no. 3307, p. 4, 6) Text in Russian. *Title tr.:* Pioneers of Siberia: M. M. Gedenshtrom.

Biographical sketch of Matvei Matveevich Gedenshtrom (1781-1845), one of the earliest explorers of northern Siberia: his expedition to the New Siberian Islands in 1809-1812, his unsuccessful attempt to reach the hypothetical Sannikov Land, and his description of the northern Siberian coast from the mouth of Yana River to "Baranov kamen'"; bibliographical notes.

Copy seen: MH-A.

33363. ASMOUS, VLADIMIR C., 1891- . Russian explorations in the Pacific. I. Discovery of Bering Strait by S. Dezhnev. (Russia, Oct. 1944, v. 1, no. 2, p. 12-13)

Contains brief account of the trading expedition of 90 men in six "koches" under command of S. Dezhnev, which sailed from Nizhne-Kolymsk on June 20, 1648, eastward along the coast, entering the present Bering Strait at the beginning of September. Four of the vessels were lost, Dezhnev and 25 survivors landing somewhere south of the Anadyr' River. They reached the point where Anadyrsk now stands and were relieved in 1650.

33364. ASMOUS, VLADIMIR C., 1891- . Russian explorations in the Pacific, II. First expedition of Bering and Chirikov. (Russia, 1944, v. 1, no. 4, p. 13-14)

Deals with Bering's voyage from Nizhne-Kamchatka, July 13, 1728, in an attempt to reach the Arctic Ocean, but turning back at 67°18' N. lat. on Aug. 15th. The Diomed Islands were discovered on the return trip. Bering's unsuccessful attempt to reach the coast of Alaska in June 1729 is also noted.

Copy seen: MH-A.

33365. ASMOUS, VLADIMIR C., 1891- . Russkie iskateli zemel', I. Vladimir Atlasov, zavoevatel' Kamchatki. (Rossiya, 1942, v. 10, no. 2477, p. 3-4) Text in Russian. *Title tr.:* Russian explorers, I. Vladimir Atlasov, the conqueror of Kamchatka.

Sketch of V. V. Atlasov, ca. 1650-1711, and his activities from his appointment as commander of Anadyr' fort (ostrog) in 1695: his military expedition into Kamchatka Peninsula in 1696, skirmishes with the natives, their submission and payment of tribute (fāsak) in valuable furs; consolidation of the conquered territory; imprisonment of Atlasov, 1700-1706 for crimes in office, and amnesty; a second mission to Kamchatka, 1707, suppression of the native uprising, cruel treatment of both native and Russian populations, a mutiny of cossacks and the murder of Atlasov in 1711. *Copy seen:* MH-A.

33366. ASMOUS, VLADIMIR C., 1891- . Second Expedition of Bering and Chirikov, 1733-42. pt. 1-5. (Russia, 1944, v. 1, no. 6, p. 8-10; (2) 1945, v. 2, no. 13, p. 14-16; (3) no. 17, p. 15-16; (4) no. 22, p. 13-15; (5) no. 26, p. 8-9)

Contents: Pt. 1, *Organization and personnel*, includes brief notes on scientists of the expedition: J. G. Gmelin, G. W. Steller, G. F. Mueller, J. E. Fischer, L. De La Croyere and S. P. Krashenninikov.

Pt. 2, *The travels of Spanberg and Walton to Japan*, is a general account of three attempts (June 1738, May 1739 and May 1742) of Capt. M. Spanberg's detachment of the expedition to establish a sea route from Okhotsk to Japan. The second voyage only was successful, both ships of Spanberg and Walton reaching Japan. The coasts of Hondo, Hokkaido, North Kurile Islands, of Sakhalin and the Sea of Okhotsk were surveyed in the course of these voyages.

Pt. 3-4, *Voyage to Alaska*, deal with the expedition of Bering and Chirikov from Petropavlovsk to Alaska (June 4, 1741): separation of their vessels, Bering's discovery of Alaska (July 16th) and various islands, his return voyage, encountering stormy weather, scurvy, and landing on a small island, now called Bering Island. The wintering there is described, death of Bering and 20 sailors, building of a new vessel and (Aug. 13-26, 1742) the return to Kamchatka.

Pt. 5, *Voyage of Chirikov*, deals with Chirikov's experiences after separation from Bering: sighting the coast of Alaska July 14-15, loss of 15 sailors sent ashore for fresh water, return voyage (beset with scurvy) to Petropavlovsk on Oct. 10, 1741. *Copy seen:* MH-A.

Contains a brief account of an excursion to the Abisko region for the study of alpine and subalpine belts. Some plants of *Saxifraga hirculus* were found on a mire, a very remarkable find far from the known area of that species.

Copy seen: DGS; DSI; MH-A.

33368. ASSMANN, KURT, 1883- . The invasion of Norway. (United States Naval Institute. Proceedings, Apr. 1952. v. 78, no. 4, p. 400-413, illus., text map)

Contains detailed description of the plans for, and actual invasion of Norway by German forces. Six task groups were organized by the German Navy. Group I, assigned to Narvik (68°26' N. 17°25' E.), consisted of the battleships *Scharnhorst* and *Gneisenau*, and 10 destroyers with 2,000 troops. The destroyers took the town on Apr. 9, 1940, while the battleships continued north into the Arctic Ocean, returning several days later. British attacks on Narvik on Apr. 10 and 13, capture of the town by the Allies May 28, recapture by the Germans June 8, and final British-German naval battle are noted.

Translated and condensed by Capt. Roland E. Krause from a chapter in *Deutsche Schicksalsjahre*, 1950 (copy in DLC). Author was vice-admiral of the former German Navy.

33369. ATKINSON, DALE S. Let's look at bush planes. (Canadian aviation, Nov. 1945. v. 18, no. 11, p. 79-82, illus.)

Features of a hypothetical aircraft suitable for commercial operations north of parallel 50 are discussed. Suitability and utilization are the important considerations. Cost calculations based on data for a Norseman Mk. V seaplane are included. **Copy seen: DLC.**

ATKINSON, J. H., see U.S. Naval Institute. Alaskan defenses tightened. 1954. No. 37950.

33370. ATKINSON, P. C. The use of the helicopter for topographical mapping surveys. (Canadian surveyor, Oct. 1953. v. 11, no. 6, p. 5-13, text map, 3 diagrs.)

Advantages and disadvantages of helicopters for transporting personnel and carrying out barometric leveling are noted, and typical flight schedules using helicopters are discussed and diagrammed. In northern Yukon, a completely airborne operation has been carried out by the Canadian Topographical Survey each summer since 1950, using two helicopters and a conventional aircraft. In three years 50,000 sq. mi. were controlled for 1:250,000 mapping north of 64° N. Operations (since 1949) are also described in Quebec, Labrador, and Newfoundland, where horizontal and vertical control have been established for mapping 35,000 sq. mi.

33374. AUDUBON, JOHN JAMES, 1785-1851. Audubon and his journals, by Maria R. Audubon; with zoological and other notes by Elliott Coues. New York, Charles Scribner's Sons, 1897. 2 v.

Includes (v. 1, p. 343-445) The Labrador journal, a day-by-day record of a trip which started on June 4, 1833, in Eastport, Me., and was concluded on Aug. 31, 1833, when the schooner Ripley returned to the same port. The places visited and, especially, the birds observed or obtained are noted; data are given on their life habit, habitat, plumages, songs, eggs, and nests. Some additional notes on taxonomic matters are added (footnotes). The

results of this trip, colored plates of some 70-80 Labrador birds, accompanied by detailed descriptions are included in Audubon's classic *Birds of America*, London, 1827-38 (4 v.) and *Ornithological biography*, Edinburgh, 1831-39 (5 v.) text.* Many of these plates (elephant folio in size) are remarkable for their artistry as well as their scientific interest, among others *Tetrao canadensis* (plate 294), *Lagopus rupestris* (plate 301), *Tringa pusilla* (plate 337), *Fuligula glacialis* (plate 410), *Larus marinus* (plate 450). Details on the history of this trip and the personnel of the expedition are given in M. R. Audubon's introduction to the journal (p. 345-47), also by R. Deane in *Audubon's Labrador trip of 1833*, q. v.

33377. AUERBAKH, NIKOLAI KONSTANTINOVICH, 1892-1930. Arkhiv Turukhanskogo monastyr'ia. (Sibirskie ogni, 1927. god 6, no. 4, p. 213-14) Text in Russian. **Title tr.:** The archives of Turukhansk monastery.

Contains a brief historical sketch of this famous monastery founded in 1667, stressing its importance to the economic life of the Russian North. The archives, containing numerous documents dated from 1721, were despoiled during the Revolution, and transferred to the regional museum at Krasnoyarsk in 1921. Trade with the natives is often mentioned in the documents.

Copy seen: DLC.

33378. AUERBAKH, NIKOLAI KONSTANTINOVICH, 1892-1930. Doistoricheskie bogatstva Sibiri, ikh okhrana i izuchenie. (Sibirskii kraevoi nauchno-issledovatel'skii s'ezd. 1st, Novosibirsk, 1926. Trudy, 1928. t. 5, p. 221-25) Text in Russian. **Title tr.:** Prehistoric riches of Siberia, their preservation and studies.

Contains a brief review of archeological investigations of Siberia in three periods: (1) those of the 18th century travelers, G. F. Müller, Gmelin, Pallas, and others; (2) studies carried out on local initiative by Spasskii, Stepanov, and others; and (3) the period of regional studies by organizations, e. g., the East-Siberian branch of the Russian Geographical Society. Investigations by foreigners are also mentioned, e. g. Aspelin, Tallgren, G. Merhart v. Bernegg, and others. Numerous archeologic monuments were destroyed by the local population after the Revolution for their stone or metal. Steps should be taken to preserve and describe prehistoric monuments. Tasks of archeologic investigations in Siberia for the near future are outlined.

Copy seen: DLC.

33379. AUGER, PAUL ÉMILE, 1908- . The stratigraphy and structure of the northern Labrador Trough, Ungava, and New Quebec. (Canadian mining and metallurgical bulletin, Aug. 1954. v. 47,

no. 508, p. 529-32, illus., text map, cross-sections) Also pub. as: Canadian Institute of Mining and Metallurgy. Transactions, 1954. v. 57, p. 327-30.

The northernmost section of the Labrador Trough extends for about 200 miles approx. parallel to, and within 20 miles of the western shore of Ungava Bay, from Larch River to a few miles north of Payne River, Ungava Peninsula (57°30' N. to 60° N.). In general, the basal granite-gneiss complex is overlain by quartzites, dolomites, and iron formations which occupy the western border of the trough and which are in turn overlain by sediments, volcanics, and gabbro-diorite sills occupying the central and eastern parts. Distribution of the iron formation is discussed. Only the western border of the trough is structurally typical of a sedimentary basin; the central and eastern parts are characterized by steep dips, overturned beds and overriding faults caused by stress from the northeast. Metamorphism increases from south to north and from west to east.

33380. AUJARD, COLETTE. Influence d'une sécrétion prolongée de noradrénaline ou d'un séjour de le longue durée à basse température, sur les lipides du foie chez la rat. (Société de Biologie. Comptes rendus, June 1953. v. 147, no. 11, p. 965-68, table) 3 refs. **Title tr.:** The influence of a prolonged secretion of noradrenaline or of a long sojourn at low temperature on the lipids of the rat liver.

Injections of methylphosphonate of diethyl produced the same effects on on liver lipids as those of noradrenaline; the effects were more constant and regular than those from exposure to cold.

Copy seen: DSG.

33381. AUSTIN, C. C. 'Roof sewing'. (Engineering and mining journal, Sept. 1953. v. 154, no. 9, p. 91, illus. incl. ports.)

Describes unique method of mine roof support, similar in function to roof bolting, used (at Sulitjelma mine in north-central Sweden, about 67° N. 16° E.), where the conventional bolt is insufficient. Loops of wire rope are pushed to top of holes drilled in roof, and then cemented in place, cementing the loose rock into one solid piece which is suspended by the wire loops in the drill holes from solid rock overlying

the loose rock. The technique was devised by Einar Tröften.

Copy seen: DLC.

33382. AUSTIN, C. C. Why mines in Norway and Sweden adopted flat drill steel. (Engineering and mining journal, Oct. 1953. v. 154, no. 10, p. 86-87, illus. incl. ports.)

Use of flexible flat drill steel at Fosdalens Bergverks, Malm, Norway, on Trondheim Fiord, Nord-Trøndelag County, allowed drilling of longer holes, increased vertical drift interval, and increased tonnage broken per shift. Character of the flat drill steel and method of use are described. Revision of design of pneumatic-pusher type drill in use was necessary.

33383. AUSTIN, OLIVER LUTHER, 1903- . Labrador records of European birds. (Auk, Apr. 1929, v. 46, no. 2, p. 207-210)

Contains notes on the lapwing, European coot (*Fulica atra atra*), European common snipe (*Capella gallinago gallinago*) and European jack snipe (*Limnocyrtus minimus*) obtained in Labrador (Battle Harbour and Hopedale) in the summer 1928.

Copy seen: DSI; MH-Z.

33384. AVDEEV, AL. Pokhod Vasilii Pofarkova. (Vokrug sveta, Oct. 1946. no. 10, p. 58-60, illus.) Text in Russian. **Title tr.:** Expedition of Vasilii Pofarkov.

Contains a popular account of the expedition of Vasilii Danilovich Pofarkov from Yakutsk to the Amur River in 1643-1646; the significance of Yakutsk as a base for Russian penetration into eastern and northeastern Asia is stressed; Pofarkov's trip from Yakutsk down the Lena and up the Aldan River is described.

Copy seen: DLC.

33385. AVERINTSEV, SERGEI VASIL'EVICH, 1875- . Barentsovo more kak pitomnik promyslovyykh ryb. (Priroda, 1935, no. 7, p. 47-54) Text in Russian. **Title tr.:** Barents Sea as a school ground of commercial fishes.

A study of the importance of Barents Sea as a base of the commercial fishes of northern Russia. Data are presented on its limits, bottom relief, hydrological regime, currents and circulation. The phytoplankton, zooplankton, places of fish concentration are noted: Murman coast, Kanin-Kolguyev region and Bjørnøya bank. The life cycle, migration and

spawning of cod, herring (*Clupea harengus*), saïda (*Pollachius virens*) and some less important commercial fishes of the Barents Sea are discussed.

Copy seen: DLC; MH.

33386. AVERINTSEV, SERGEI VASIL'EVICH, 1875- Sel'di severa SSSR; vazhnelshie cherty ikh biologii i promysla. (Priroda, 1934, no. 10, p. 64-68) Text in Russian. **Title tr.:** Herring of northern U.S.S.R.; the main features of their biology and the industry.

Contains the results of a study of geographic races of herring in the White and Barents Seas carried out during 1923-33. The herring of the Severnaya Dvina, Onega, and Kandalaksha Bays of the White Sea belong to two separate taxonomic groups (small and large) and can be considered distinct races. Their characteristics and biology are discussed. The herring of the Murman coast is *Clupea harengus* of Norwegian waters and comes to Barents Sea during migration. The eastern section of this sea is inhabited by another species, *C. pallasi*. The migration routes, biology and methods of catching of herring are discussed.

33394. AYR, JOHN. Survival suits. Ottawa, Dec. 1952. 4 p. Mimeographed. (Canada. Dept. of External Affairs. Information Division. Reprint, no. 133) Reprinted from *CIL oval*, Dec. 1952.

Contains popular account of development and testing of suit of lightweight nylon developed by W. E. Cowie, Canadian Defence Research Board. Outdoor tests on the suit were made by S. Alexander and A. Blouin during a 5-day, 80-mile journey on Victoria Island. Advantages of the fabric over caribou skin and wolverine fur used by the

Eskimos include light weight (suit weighed 11½ lbs.), durability, warmth, and moisture resistance.

33395. AZADOVSKIĬ, MARK KONSTANTINOVICH. Obzor bibliografii Sibiri. Tomsk, 1920. iv, 46 p. (Tomsk. Universitet. Obshchestvo étnografii, istorii i arkheologii. Trudy. vyp. 1) Text in Russian. **Title tr.:** Survey of bibliographies of Siberia.

A bibliography of bibliographies on Siberia up to 1919. Altogether 133 works, books and articles, are listed with critical evaluation, in seven chapters: general works, periodicals, particular regions, nationalities, sciences, particular problems, and bibliographies of authors who have investigated Siberia. Appended are indexes of (1) authors, (2) periodicals, and (3) nationalities and geographical names, the last providing a useful guide for the northern regions and peoples: Aleuts, Alaska, Voguls, Gilyaks, Dolgans, Kamchadals, Kamchatka, Koryaks, Lamuts, Orochi, Ostyaks, Paleo-Siberians, Samoyeds, Tungus, Chukchis, Yukaghirs, Yuraks, and Yakuts.

33397. B., F. D. Razzi per lo studio delle aurore boreali. (Rivista di meteorologia aeronautica, Jan.-Mar. 1953. v. 13, no. 1, p. 55). Text in Italian. **Title tr.:** Rockets for the study of the aurora borealis.

"Viking rockets [will be used] for study of aurora in Norway, under sponsorship of U.S. Navy (O. N. R.) . . . The ascents will be made near Troms [69°40' N. 18°58' E.] where Störmer has his institute for study of the aurora, and at a latitude more favorably located with respect to the auroral zone than any place in the U.S.A. The rockets are equipped with special photographic equipment and will penetrate well into the auroral zone."—*Meteorological abstracts & bibliography*, Mar. 1954. v. 5, no. 3, p. 418. **Copy seen:** MH-BH.

33398. BABERO, BERT BELL. Studies on the helminth fauna of Alaska, XII. The experimental infection of Alaskan gulls (*Larus glaucescens* Naumann) with *Diphyllobothrium* sp. (Washington Academy of Sciences. Journal, May 1953. v. 43, no. 5, p. 166-68, table) 6 refs.

Fifty-one young gulls were obtained from isolated nesting grounds in Cook Inlet, 20 miles southwest of Anchorage. From post-mortem examination of 37 when collected, only one species of trematode was discovered. Of 14 kept and infected with visceral and muscular cysts from rainbow trout, seven, upon autopsy were found infected with *Diphyllobothrium* sp. Successful infection of the gulls complicates the problem of control of this helminth in Alaska, and diphyllobothriasis must be regarded as a definite public health problem.

33402. BADER, HENRI, 1907- Introduction to ice petrofabrics. (Journal of geology, Nov. 1951. v. 59, no. 6, p. 519-36, 5 illus. on 2 plates, diags., table) 10 refs.

Contains material based on studies of the Malaspina Glacier and Juneau Ice Field, Alaska, made by the author in summer 1949 and 1950. "The mechanical properties of ice, particularly viscosity, depend on its structure and texture. The study of ice petrofabrics is an essential auxiliary to all experimental work on ice mechanics, and is of value in the study of glacier flow. A common interlocking type of glacier ice structure is described in detail. Crystal orientation patterns of dead and living ice are illustrated. There is need for field and laboratory work to correlate stress-strain and crystal-orientation patterns. This paper is mainly a

description of ice petrofabric techniques for field and laboratory use."—Author's abstract. Discussed by A. G. MacGregor in *Shear-stress fabrics* . . . , 1952, q. v.

Copy seen: DLC.

33403. BADER, HENRI, 1907- . Sorge's law of densification of snow on high polar glaciers. (*Journal of glaciology*, Apr. 1954. v. 2, no. 15, p. 319-23, graph, table) 2 refs.

From work done at "Eismitte" during Wegener's Greenland Expedition 1930-31, Ernst Sorge showed that "in central Greenland where there is no melting in the summer, the density of snow at a given depth below the surface does not change with time." From this concept he found a method for determining annual accumulation where the annual layers cannot be distinguished. This law "is here given a simple mathematical form and some of its implications are formulated and discussed." A graph and table of snow depths and densities at "Eismitte" 1930-31, show that the theory is quite applicable to this region.

33408. BAGNOLD, R. A. Navigating ashore. (Institute of Navigation, London. Journal, Apr. 1953. v. 6, no. 2, p. 184-93, 3 fig.)

Land navigation problems with emphasis on over-snow and desert travel are discussed. The Cole universal sun compass, the Bagnold sun compass, and a sun compass combining the advantages of both the Cole and Bagnold compasses are described. The sun compass is robust, simple, and gives true bearings, which are a great advantage in polar regions. Distance is measured on a sledge journey by means of a trailing wheel connected by a flexible cable to a comptometer mounted on the sledge, with the navigator skiing alongside. A simple instrument for astro-navigation on land, designed by E. H. Thompson, which measures altitude only is briefly described. G. de Q. Robin, in a discussion following Brigadier Bagnold's paper, indicates the use of a prismatic compass, as the master compass, and aircraft compasses fitted to dog sledges as steering indicators, during the Norwegian-British-Swedish Antarctic Expedition. A. Stephenson notes the usefulness of *sastrugi* as a steering indicator in Greenland.

33426. BAKAĬ, NIKOLAĬ NIKITICH, 1862-1926. Arkhivnoe delo v Sibiri. (Sibirskii nauchnoissledovatel'skii s'ezd. 1st, Novosibirsk, 1926. Trudy, 1928. t. 5, p. 172-85) Text in Russian. **Title tr.:** Archival affairs in Siberia.

Historical sketch. G. F. Müller's search for archival documentsⁱⁿ Siberia in 1733-1744 is mentioned. The archives of Tyumen, the oldest in Siberia, were started in 1594, those of Tobol'sk in 1625. Sibirskii Prikaz (Siberia Department) in Moscow is rich in documents. Archival commissions in the Yeniseysk and Irkutsk Governments accomplished little; but the Soviets founded Sibarkhiv in 1920, which organized state archives

(Gubarkhiv) in Irkutsk, Krasnoyarsk, Omsk, Tomsk, and Barnaul. The work and collections of these archives are outlined: e. g. Omsk has about 90,000 dossiers, including documents on Cossack activities in Siberia in the last 200 years, their influence on economic and cultural life, on colonization of Siberia, relations between Russians and the native population, etc.

Glycogen content of the heart, liver, diaphragm, and of the fat from perirenal and interscapular regions is lower in cold-acclimatized animals than in controls; glycogen in skeletal muscle and blood sugar levels are about equal in both groups. Cold-acclimatized animals show a greater fall in blood sugar after insulin. These results are attributed to elevated metabolic rate in cold-adapted animals.

33431. BAKER, ROLLIN HAROLD 1916- , and J. S. FINDLEY. Mammals from southeastern Alaska. (Kansas. University. Museum of Natural History. Publications, April 21, 1954. v. 7, no. 5, p. 473-77)

Contains an annotated list of ten species of mammals (mice, voles, squirrel, bat, porcupine, etc.) obtained by J. R. Alcorn and A. A. Alcorn in the vicinity of Anchorage and Haines and from Sullivan Island in the Lynn Canal, southeastern Alaska, in the summer of 1951. **Copy seen:** DLC; MH-Z.

33432. BAKHRUSHIN, SERGEĬ VLADIMIROVICH, 1882-1950. Snariâ-zhenie russkikh promyshlennikov v Sibiri v XVII veke. (In: Leningrad. Arkhticheskil . . . institut. Istoricheskil pamâtnik . . . 1951, p. 85-96, 4 illus.) **Title tr.:** Equipment of Russian hunters in Siberia in the 17th century.

Contains description (based on documentary materials) of methods and technique used by Russian sable hunters in the districts of Turukhansk and Yakutsk: use of hunting dogs, bows and arrows, nets, fishing implements, etc. Fire-arms were used only for self-defense and large game in the 17th-18th centuries. Some hunting devices of the Tungus and Yakuts (e. g. *pal'ma*) were adopted by the Russians. Hunters' clothing and provisions are described; axes, knives, kettles, etc. as well as trade goods were taken into the taiga; packing boxes were used, also skis. The extent of this trade is indicated by the fact that in 1630 some 44,000 sable pelts were put on the market in Turukhansk alone.

33433. BAKHRUSHIN, SERGEĬ VLADIMIROVICH, 1882-1950. Zadachi istoricheskogo izucheniâ Sibiri. (Sibirskil kraevol nauchno-issledovatel'skil s"ezd. 1st, Novosibirsk, 1926. Trudy, 1928. t. 5, p. 59-65) 10 refs. Text in Russian. **Title tr.:** Problems of the historical investigation of Siberia.

Outlines necessity and ways of investigating the past of the Siberian native peoples, especially Ostyaks and Yakuts. Existing archival documents on their material culture, social organization and customs are indicated, e. g. acts of the Russian administration of the 17th-18th centuries in the archives of former Ministry of Justice, tax lists, petitions, custom books and notes of Russian traders, etc. Russian colonists' psychological adaptation to life in Siberia, and the considerable influence of natives, especially Yakuts, upon the material life, biology, customs and beliefs of such colonists are noted. The cultural level of Yakuts, Buryats and Ostyaks was quite high in the 17th century, although it deteriorated later.

33437. BALCHEN, BERNT, 1899- . Ground and air operations. New York, Society of Automotive Engineers, 1953. 7 p. (Its: Preprint 110).

Contains discussion of the strategic importance of the arctic regions including a description of the salient features of the Greenland Ice Cap. Cold weather operations, engineering and construction techniques are summarized in relation to installations necessary to conduct aerial operations in the Arctic. Climate,

terrain, and communication conditions which cause various problems are enumerated, and problems common to most arctic projects such as accessibility, supply transportation, cargo handling, and logistics are briefly outlined. Problems requiring solution in order to enhance operational capabilities in the Arctic are listed. Included are installation, construction, food, clothing, and personnel problems.

33445. BANDI, HANS GEORG, 1920- . Die Frage eines Zusammenhanges zwischen dem Magdalénien und der Eskimokultur. (Schweizerische Gesellschaft für Urgeschichte. Jahrbuch, 1949-1950, pub. 1950. Bd. 40, p. 75-92, table) 61 refs. Text in German. Summary in French. **Title tr.:** The question of a relationship between the Magdalenian and Eskimo culture.

Contains a review of prehistoric cultures in western and central Europe, Siberia, and regions inhabited by Eskimos. The archeological and ethnographic character of the arctic coastal culture is discussed. The theory of W. B. Dawkins (1866) that the Eskimos were West European reindeer hunters of the Magdalenian period, who followed the retreat of reindeer to the North, is rejected. The Eskimo culture originated from the mesolithic circumpolar culture of northern Asia, that of inland-ice hunters; and the first or Proto-Eskimos came from Asia to America around 5,000 B. C. At the beginning of our era, a Paleo-Eskimo culture developed in Alaska, and finally since about 500 B. C., the coastal or Neo-Eskimo culture is related to the modified late Aurignacian culture of Siberia. Some similarities between Eskimo and Magdalenian culture were caused by similar natural conditions, and there is no evidence of any direct relationship with Europe.

33446. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918- . Preliminary investigation of the barren ground caribou; part I, former and present distribution, migrations, and status; part II, life history, ecology, and utilization. Ottawa, Nov. 1954. 2 v.: 79 p., 111 p. 29 illus. 13 text maps, diagrs., graphs, 39 tables. Mimeographed. (Canada. Wildlife Service. Wildlife management bulletin, series 1, no 10A, 10B) 126 refs.

Scientific account of the Canadian Wildlife Service investigation headed by

the writer during its initial phase 1948-1950; includes details of interest to biologists and game management officers not included in the earlier, popular version (*Arctic Bibliography*, No. 20440), also "as complete an account of the subspecies as present knowledge permits." In pt. 1, the field work and physical environment (Hudson Bay to Mackenzie River) are described; the caribou's former and present summer and winter ranges, population data and estimates are given; migration routes, seasonal character and human influences upon it are presented, as well as changes in range, status, and migrations. In pt. 2, physical description is given, followed by range vegetation studies, food requirements, and behavior; vital statistics, mortality studies are presented; external and internal parasites, bacterial diseases, accidents, and predation, are considered, as well as human utilization.

Between 1900 and 1950, the caribou population was reduced by an estimated 62 percent (1,750,000 to 670,000). Areas showing greatest reduction are listed. Present mortality figures indicate an annual loss of 178,000 animals and an annual increment of only 145,000 calves. Present caribou population is large enough to supply basic needs of the dependent human population on a continuing basis, only if sufficient caribou are killed for needs without wastage. Chief sources of wastage are noted. Tables give data from aerial surveys, estimates of herds in 13 areas; main herds 1950; physical measurements; range vegetation (extensive lists of plant species in various regions); summer stomach analyses; number killed by district.

Contains "a discussion of the effects of the seasonal freezing of bodies of water upon mammalian distribution." Ice acting in a static way, as a bridge, and in a dynamic way, as a carrier, is considered. Its role in the migrations of the caribou, muskox, moose, wolf, fox, lemming, squirrel, etc. is discussed.

Crustacean plankton were analyzed from 32 plankton collections made by the author in the region 63°-64°35' N. 101°-104°20' W. (Mackenzie and Keewatin Districts) during a biological investigation July 6-Aug. 21, 1952 for the Canadian Wildlife Service. The region is described; temperature and pH of Thelon River are noted, also of lakes and ponds from which collections were made. Species of Eubranchipoda, Cladocera, Copepoda, Ostracoda, and Amphipoda are listed, some with brief annotations. Cladocera were the best represented group.

Contains a general description of the tundra regions of arctic Canada, Alaska, and Siberia, well illustrated with colored photographs of the Canadian Arctic Islands and Barren Grounds, and with paintings by R. Freund. Location and exploration of these areas are briefly noted. The appearance of the Arctic during the various seasons, climate, birds, and animals, landscape features caused by frost action, vegetation, man and natural resources are discussed, the latter two subjects very briefly. U. S. and Canadian arctic specialists and organizations assisting in preparation of the article are listed.

(International Union of Geodesy and Geophysics. Association of Terrestrial Magnetism and Electricity. Bulletin, no. 12d)

"Extensive tables give K-indices for 44 stations at all latitudes. Location scale values and cooperating scientists at each station are also tabulated. A history of the Polar Year effort, and description of the purpose and methods of computing

these K-indices is included in the preface. The 1932-33 indices are intended for comparison with the available indices for 1940-1949. Planetary indices are listed, and sudden commencements and solar flare effects are tabulated. Graphs of planetary magnetic 3-hour range indices Kp arranged according to solar rotation interval (27 days), and with sudden commencements indicated."—*Meteorological abstracts and bibliography*, Sept. 1954. v. 5, no. 9, p. 1098. **Copy seen:** DLC.

33466. BARTH, TOM FREDRIK WEIBY, 1899- . The layered gabbro series at Seiland, northern Norway. (Norway. Norges geologiske undersøkelse, 1953. Nr. 184, Årbok 1952, p. 191-200, 4 maps incl. 1 fold.) 3 refs.

A geologic investigation on the island of Seiland (70°30' N. 23° E.) was undertaken in 1952 by the Norwegian Geological Survey. The supracrustal amphibolite-gneiss complex and the gabbro to ultrabasic igneous rocks are briefly described. All gabbroic rocks form concordant bodies, and at several localities exposed profiles show a layered structure with a total thickness of more than 1000 m. These gabbros are described and brief comparison is made with other layered igneous rock bodies (Bushveld in South Africa, Skaergaard intrusion in East Greenland). Numerous basic and pegmatitic dikes occur; the pegmatitic types are described.

Contains a study of the social structure of the harems as determined by the behavior of this species, *Calorhinus ursinus*, during the mating season. Information is presented on the behavior of males: territory maintenance, harem maintenance, sexual activity, reaction to bachelors, etc.; aggression towards other species; distributional pattern resulting from bulls' behavior; harem organization; relation of bulls to pups; break-up of social structure. Discussion following presentation of the paper is included. The study was carried out on St. Paul Island in the Pribilofs, Bering Sea, June-Aug. 1951. **Copy seen:** DLC.

33468. BARTHOLOMEW, GEORGE ADELBERT, Jr., 1919- . Body temperature and respiratory and heart rates in the northern elephant seal. (Journal of mammalogy, May 1954. v. 35, no. 2, p. 211-18, fig., 3 tables) 12 refs.

Contains rectal temperatures, etc., of 24 sleeping animals ranging in length from 44 inches to 16 ft. The observations were made under natural conditions in California with air temperatures ranging from 13.9° to 19.6° C.

Copy seen: DSI-M.

33470. BARTLETT, R. G., Jr., and others. Effect of restraint on temperature regulation in the cat. (Society for Experimental Biology and Medicine. Proceedings, Jan. 1954. v. 85, no. 1, p. 81-83, illus.) 5 refs.

Cats restrained by binding legs or head to a stationary support were exposed to -15° C. \pm 2° C., and compared with similarly exposed unrestrained or dead animals. Body temperatures in the restrained cats fell by 5.6° in two hours, as compared with 1.2° C. in the free controls, and 10.2° C. in the dead ones.

33471. BARTLETT, R. G., Jr., and others. Evidence of an emotional factor in hypothermia produced by restraint. (American journal of physiology, Nov. 1954. v. 179, no. 2, p. 343-46, fig., table) 8 refs. Other authors: V. C. Bohr, R. H. Helmsdach, G. L. Foster and M. A. Miller.

Account of experiments with rats which indicate that hypothermia may be produced by light restraint. The more emotional animals experienced a greater drop in body temperature, when restrained.

Copy seen: DSG.

33472. BARTLETT, R. G., Jr., and U. D. REGISTER. Further studies on effect of cold and restraint on tissue non-protein sulfhydryl compounds. (Society for Experimental Biology and Medicine. Proceedings, June 1954. v. 86, no. 2, p. 397-99, table) 8 refs.

Hypothermia or restraint lowered the concentration of NPSH in the liver of rats, but not in the muscle or kidney. When applied simultaneously, the effect was approximately additive. The possibility of an effect through activation of the sympatho-adrenal mechanism is discussed.

33480. BATES, CHARLES CARPENTER, 1918-, and others. Development of the U. S. Navy's ice forecasting service, 1947-1953, and its geological implications. Washington, D. C., U. S. Hydrographic Office, 1954? 23 p. 3 text maps. Mimeographed. 11 refs. *Other authors:* H. Kaminaki and A. R. Mooney.

An historical outline is given of ice forecasting services of various countries from the 1840's (Denmark and Finland) to the present, with emphasis on services along the Northern Sea Route of the U.S.S.R. and on the International Ice Patrol in the North Atlantic. Study of sea ice in the North American Arctic was begun by the U. S. Hydrographic Office in 1947. Until 1950 ice reconnaissance was carried out by ship. Aerial reconnaissance was made during U. S. and Canadian military operations in 1950 and 1951, and was expanded in the Canadian Arctic Islands region and Labrador Sea-Baffin Bay-Davis Strait in 1952 and 1953. The 1953 program (which included 250,000 miles of reconnaissance) is described, with notes on ice conditions in the Canadian Eastern Arctic. The forecasting program has been devoted mainly to problems of coverage and ice thickness. Short and long range forecasting is briefly described and future research problems are noted.

33483. BAUER, ALBERT. Frontverschiebungen des Gletschers Equip Sermia, West-Grönland 1912-1953. (Polarforschung, 1953. pub. 1954. Bd. 3, Heft 102, Jahrg. 23, p. 234-35) Text in German. **Title tr.:** Frontal movements of the Equip Sermia Glacier, West Greenland 1912-1953.

Equip Sermia is an inland-ice glacier which calves into De Quervains Haven near 69°47' N. 50°15' W. Measurements made by the French Polar Expedition during 1948-1953 showed that its mean terminal velocity is 3 m. per day. Data of frontal displacement of the glacier from 1912-1952 was obtained from various sources and the conclusions drawn were confirmed by measurements made in 1953. The glacier was advancing in 1912, attaining a maximum in 1920, and retreated to its 1912 position by 1929. The retreat lasted until 1948.

and the glacier has been stationary from 1948 to 1953 and may actually be advancing. The glacier is not meteorologically influenced, but reacts to climatic variations of the inland ice, since 75 percent of its total area covers the drainage region of the inland ice.

33484. BAUER, ALBERT. Synthèse glaciologique. (*In:* Expéditions polaires françaises. Expédition arctique. Contribution à la connaissance de l'inlandsis du Groenland. . . 1954. p. 27-54, text maps, graphs) 37 refs. Text in French. Summary in English and German.

"Glaciological studies on the Greenland Ice Cap by French expeditions in 1948-1953 are reported and results are mapped and plotted. The Ice Cap has an area of 1726 million sq. km., a volume of 2.6 million cu. km., an average thickness of 1515 m., an average surface elevation of 2135 m. (0-3300 m.) with the firm line at an average elevation of 1390 m. (915-1830 m.) and a negative budget of 100 cu. km./yr. The Ice Cap is not in thermal equilibrium; ice temperatures decrease with depth to values considerably lower than pressure factors demand (-16.2°C and -27.7°C at 120 m. at 2 sites), while density increases irregularly with depth (0.50 at 18 m., 0.88 at 130 m. at 1 site). Annual accumulation is 446 cu. km. of water; annual loss is 315 cu. km. by ablation and 215 cu. km. by discharge (120 cu. km. as icebergs from 8 ice rivers)."—SIPRE.

Title tr.: The school in the far North.

The conquest of Siberia, spread of Christianity among the natives, and schools under the tsarist régime from the mid-19th century are described: teaching in the native tongues, strengthening of the policy of Russification through the schools after 1905, etc. The period of the Revolution, establishment of native schools under supervision of the Committee of the North, and work of these

schools are treated in more detail: facilities and buildings, teachers, the boarding school, teaching in native and Russian languages, mathematics, natural sciences, geography and the arts. Extra-curricular activities and why children like school, etc., are discussed. *Text maps* show distribution of schools and their types. It is evident that the process of civilization through the schools obliterates the national character of the natives and opens the way for speedy Russification. Teaching of native languages is inadequate because of the varied origin of the pupils in a school, and the teacher's lack of knowledge or indifference to the native tongue. Art is popular among the pupils and many of their drawings and sculptures are illustrated (p. 158-70). **Copy seen:** DLC; NN.

33490. BAZETT, HENRY CUTHBERT, 1885-, and others. Hypothalamus and temperature control. (Archives of neurology and psychiatry, Oct. 1933. v. 30, no. 4, p. 728-48, 11 fig.) 26 refs. *Other authors:* B. J. Alpers and W. H. Erb.

Cats with anterior decerebrations show the capacity of reacting to cold and of temperature regulation in the absence of the corpus striatum and thalamus. Temperature control appeared to be associated with the preservation of the hypothalamus cephalad of the corpora mammillaria. **Copy seen:** DSG.

33491. BAZETT, HENRY CUTHBERT, 1885-, and others. The temperatures in the tissues which accompany temperature sensations. (Journal of physiology, Mar. 1930. v. 69, no. 1, p. 88-112, 9 fig., 4 tables) 12 refs. *Other authors:* B. McGlone and R. J. Brocklehurst.

Contains records of temperature changes in the neighborhood of cold and hot spots accompanying thermal sensations. By correlation of latencies of sensation and rate of penetration, the depth of cold end-organs was calculated as 0.15 ± 0.1 mm., that of the organs for warmth as 0.6 ± 0.2 mm. Paradoxical sensation and after-sensation are also discussed. **Copy seen:** DSG.

33494. BEATTIE, J., and R. D. CHAMBERS. The effect of removal of the adrenal medulla on the changes in oxygen consumption and radio-iodine (I^{131}) uptake following exposure to cold in albino rats. (Quarterly journal of experimental physiology, Oct. 1953. v. 38, no. 4, p. 241-48, illus., tables) 7 refs.

Removal of the medulla did not diminish oxygen consumption, or radio-iodine uptake by the thyroid of animals exposed to cold; neither was it followed by a fall in body temperature in an environment of 29.5°C . or of 18°C . The rise of radio-iodine uptake on exposure to cold seems to be due to a mechanism independent of the thyroxine-thyrotrophic hormone balance in the blood.

Contains records of three species of leafhoppers described from Europe and not recorded previously for America: *Doliotettix pallens* found in Alaska. *Psammotettix lapponicus* collected at

Chesterfield, Northwest Territories, in Aug. 1950, and *P. confinis* obtained in Alaska. *P. alienus* from northern Manitoba and Northwest Territories, and *P. lividellus* occurring in Labrador, Manitoba, Northwest Territories, Baffin Island, Alaska and Greenland, are also included.

33505. BEKLEMISHEV, K. V. Pitanie nekotorykh massovykh planktonnykh kopepod v dal'nevostochnykh moriakh. (Zoologicheskii zhurnal, Nov.-Dec. 1954. t. 33, no. 6, p. 1210-30, illus. diagrs.) 48 refs. Text in Russian. **Title tr.:** Feeding of some mass planktonic copepods of the Far Eastern seas.

Contains data on the food and feeding habits of planktonic copepods, based on results of analysis of intestines of 755 specimens collected by the research vessel *Vitiaz'*, in the Okhotsk and Bering Seas. Some 60 algal species, at least 40 of them diatoms, were found in the intestines (table 2). The copepods consume them by filtration. The food value of various kinds (bacterias, detritus, diatoms, etc.) and their quantitative characteristics are discussed, as well as the relationship of copepod feeding to the life cycles of planktonic associations.

Doklady, 1950. nov. seriia, t. 71, no. 3, p. 569-72) Text in Russian. *Title tr.:* Normal indicators of the osmotic pressure of body liquid of the invertebrates of the Barents Sea.

An investigation of the osmotic concentration of the body liquid of 48 species of invertebrates was carried out on the Murman Biological Station in 1947 (see table 1). It shows that the view of a so-called osmotic balance of pressure of the body liquid with that of the sea-water is not valid. Only two species out of 48 were found to be isotonic with sea water; the rest have either higher or lower osmotic concentration of the body liquid; some groups of crustaceans are hypotonic, the rest of the invertebrates are hypertonic.

33511. BELIKOV, S. Chukotskie iarmarki; s. Ust'-Belaia Anadyrskogo uезда. (Ekonomicheskaiia zhizn' Dal'nego Vostoka, 1928. god 6, no. 4-5, p. 154-62) Text in Russian. *Title tr.:* The Chukchi fairs; the village of Ust'-Belaia, Anadyr' district.

Contains description of this famous annual fair at the confluence of the Belaya and Anadyr' Rivers (65°13' N. 173°17' E.), visited by the writer in 1924. Chukchis come at the end of February from as far away as Zaliv Kresta, Chaunskaya Guba and the Kolyma region, and camp with their reindeer herds in a radius of 110 km. around Ust'-Belaia. The trading customs of Chukchis and other natives are sketched (e. g. Lamuts do business only at night), and pastimes such as wrestling, racing (men, reindeer, dogs), tea parties, etc., are described. The writer had an interview with the Chukchi Tëmënpël'äv, a chieftain of great authority. Chukchi hospitality, rapid oral transmission of news in the tundra (the "Chukchi telegraph"), counting system and thirteen-month calendar, etc., are described. Lack of commodities, especially tea and tobacco in mid-winter cause high prices and speculation. Chukchi furs are of low quality, as hunting is begun too early. Alaska beaver pelts can be found on the market in Ust'-Belaia. Other less important fairs are held at the village Eröpol, at Tuman (two days travel to southwest from Markovo) and other places. *Copy seen:* DLC.

33512. BELITSER, V. N. Ètnograficheskie raboty v Udorskom raione Komi ASSR v 1952 g. (Akademiia nauk SSSR. Institut ètnografi. Kratkie soobshcheniia, 1953. vyp. 19, p. 16-27, 7 illus.) Text in Russian. *Title tr.:* Ethnographic field work in the Udor region, Komi A.S.S.R. in 1952.

Contains report on a five-week trip of a three-man party to this region (center Koslan', 63°27' N. 48°54' E.) on the upper Mezen' and Vashka Rivers, inhabited mostly by Zyryans. Little ethnographic work has been done there to date, because of difficult communications. The character of the local Zyryan dialect, with many loan words from the Russian, and the chief occupation of the people, hunting and fishing, are outlined; native food and beverages are mentioned. There are about 60 settlements and the form of villages, the four house types, the dwelling's interior arrangement and exterior decoration are analyzed. Forms of clothing, wedding and burial customs, beliefs and superstitions are sketched. New cultural institutions in Koslan' are mentioned (by name), and Russian cultural influence is said to be general and strong.

33518. BELMONT, ARTHUR DAVID, 1920- . Apparent diurnal and seasonal variations of upper air temperature at Narsarsuaq, Greenland. Los Angeles, Jan. 1954. 73 p. graphs, tables. Mimeographed. (California. University. Dept. of Meteorology. [Arctic Meteorological Research]. Scientific report, no. 1. Contract AF 19(122)-228) 29 refs.

First in a series of seven reports from the U. C. L. A. Arctic Project initiated Oct. 1950 and directed by J. Bjerknes. Radiosondes were taken two to four times daily at Narsarsuaq (Blue West I), West Greenland (61°09' N. 45°25' W.), from 1946-1948, and twice daily at Thule, North Greenland (76°34' N. 68°48' W.), from 1947-1949 for comparison. The diurnal temperature variation is summarized for selected pressure levels, and seasonal shift of minimum and maximum temperatures at the various levels is described. Data showed that local midnight temperatures above the 300-mb. level in winter and spring were warmer than at noon. A general equation for temperature change, and examples of its use to compile mean mid-winter radiation at the two stations, are presented. Extensive data are appended.

Los Angeles, June 1954. 62 p. charts, graphs, tables. Mimeographed. (California. University. Dept. of Meteorology. [Arctic Meteorological Research]. Scientific report, no. 4. Contract AF 19(122)-228) 25 refs.

Fourth in a series of seven reports from the U. C. L. A. Arctic Project, initiated Oct. 1950 and directed by J. Bjerknes. Radiosonde temperature data for June 21, 1952-Mar. 4, 1953 (in the region 85°-88° N. 82°-133° W.) are summarized and features of temperature distribution, including tropopause level, mean and extreme stratosphere temperatures, tropospheric inversions, and surface temperature and wind are briefly discussed. T-3 temperatures are compared with those of other weather stations in the Canadian Arctic, Greenland, and Alaska, with "Ptarmigan" flight data, and with temperatures from Little America (Antarctica) for comparable seasons. Future research is indicated.

33522. BELMONT, ARTHUR DAVID, 1920- . Upper air temperatures over the Arctic Basin. (American Meteorological Society. Bulletin, Nov. 1954. v. 35, no. 9, p. 446-47)

Contains abstract of paper presented at the 134th National Meeting of the

Society, Dec. 28-30, 1954. Berkeley, Calif. "Comparison of the first 377 atmospheric soundings (June 1952 to Mar. 1953) from ice island T-3, 100 to 300 miles from the North Pole, with those from other arctic and antarctic stations shows the stratosphere in Jan. to be much warmer than over the Canadian Archipelago and Greenland, and similar to that over Alaska. Reasons for these and other differences and similarities are sought in the characteristics of the general circulation."

A study of published and unpublished materials on the arctic expeditions of Nikita Pavlovich Shalaurov during the period 1754-1764. He made several attempts to sail from the Lena River mouth along the north coast of Siberia to reach Kamchatka, initially with another merchant Ivan Bakhov, at their own expense, and latterly alone, with financial aid from the government. In 1761, he reached the mouth of the Yana River; in 1761-1762, as far as the Kolyma and Cape Shelag'skiy. After a journey to Moscow, he made a final attempt to sail eastward and his entire party perished, probably while wintering near Cape Shelag'skiy in 1764. The story of the preparation, equipping and building of vessels for his expeditions, the hardships from cold, storms, hunger and cruelties of Russian officers are described. The significance of the expeditions, which left rich geographic and cartographic material on almost totally unknown areas of the far North are appraised. Reduced photocopy of map compiled by Shalaurov in 1761 is given on fold. plate.

incl. 3 fold.) 22 refs. Text in Russian.

Title tr.: On compiling the general map of the second Kamchatka expedition, 1746.

Survey of the cartographic work of the Great Northern Expedition, based on published and unpublished materials. As the result of explorations of the northern coasts of Russia from Arkhangel'sk to the Kolyma, and of voyages to Kamchatka, the Aleutian Islands and Alaska, 53 regional maps were compiled by the leaders of the various parties. Special archives were established for preservation of these maps, and their cartographic material was summarized in two general maps, which were checked and signed by leaders of parties of the expedition on May 10, 1746. The process of preparing the general maps is described, and the rivalry between naval authorities and Academy of Sciences noted. Reduced photocopies of general map of 1746 and of earlier maps are inserted. Two documents referring to the general map are added in supplement.

33534. BÈNARD, CHARLES MARIE EUGÈNE PIERRE, 1867- Dans l'Océan Glacial et en Nouvelle-Zemble; Avril-Septembre 1908. Paris, Albin Michel, 1909. 193 p. ports., illus., col. plate, maps. (Société d'Océanographie du Golfe de Gascogne). Text in French. **Title tr.:** In the Arctic Ocean and on Novaya Zemlya, Apr.-Sept. 1908.

Contains account of the French Arctic Expedition under the author's command sponsored by Société d'Océanographie du Golfe de Gascogne. The expedition left Dunkerque on the *Jacques-Cartier*, Apr. 12, visited coasts of Norway, crossed Barents Sea, and on July 7 reached Belush'ya Bay in Novaya Zemlya, its headquarters. The author made

two trips in the vicinity of Kostin Shar and in August sailed home via Arkhangel'sk. From July 26 to Sept. 27, the physician of the expedition, Dr. Candiotti, accompanied by the Russian explorer, V. A. Rusanov, led a party to Matochkin Shar and the Kara seacoast, marched northward to Neznayemaya Bay and returned to Matochkin Shar whence the Russian ship *Ol'ga Konstantinonna* took the party to rejoin their expedition in Hammerfest(?). The narrative covers the preparation (including equipment, rations) and course of the expedition, also its financial troubles, with excerpts from the author's diaries; Dr. Candiotti's report on his trip (p. 119-37) and a survey of former explorations of Novaya Zemlya (p. 69-80) are included. Summary is given of the scientific work in Norway (fisheries), Barents Sea (water temperature, p. 184, marine fauna, etc.); and on Novaya Zemlya, the cartographic (p. 118), geological (e. g., solifluction phenomena, p. 146-47 and illus. p. 151-53), botanical, zoological activities (p. 139-158). Samoyeds of the southern island are described; their physical characteristics, clothing, dwellings, food, hunting, art, etc. (p. 159-68). All parts of the volume are illustrated by about 120 excellent photographs, a part of the extensive photographic work done by expedition (over 1000 plates). A chronological list of 50 scientific expeditions to Novaya Zemlya is attached, p. 189-90.

33535. BÈNARD, CHARLES MARIE EUGÈNE PIERRE, 1867- Un été chez les Samoyèdes, juillet-octobre 1914. Paris, Plon, 1921. xii, 231 p., 20 plates incl map. Text in French. **Title tr.:** A summer among the Samoyeds, July-October 1914.

Narrative of the author's expedition sponsored by the Société d'Océanographie de France, to carry on work of his 1908 expedition. From Arkhangel'sk, he went by the *Ol'ga* to Belush'ya Guba on the northern side of Kostin Shar. From this base, with a whale boat he completed the mapping of Kostin Shar. He made (from the Nekhvatova River estuary, 71°16' N. 53°27' E.) a west-east traverse of Terre de Lutke, as he terms the southern island of Novaya Zemlya, and return, on foot and alone. From the Nekhvatova he returned by whale boat to the Samoyed village on Belush'ya Guba. Thence with dog sledge and four

companions, he crossed Gusinaya Zemlya northward to Obsed'ya Guba (72°08' N. 52°20' E.). On both traverses, the physical features and terrain generally are described, and variations from (then) available maps noted. A trip by native boat was made from Obsed'ya to Karmakuly. There, from the *Gerta*, searching for the ill-fated Sedov's *Foka*, Bénard learned of the outbreak of war and returned via Arkhangel'sk to France.

From his two months' sojourn among the Samoyeds, living in their tents, traveling, hunting and fishing in their company, he gives a detailed account of their life, customs, and attitudes. Physical appearance, clothing, hunting technique, and food, trade with Russians, morals and habits are described, and text of a legendary song given (p. 159-80). Illustrations show Samoyed clothing and implements. Two final chapters deal with meteorology and geology. Wind régimes during the four seasons in the vicinity of Novaya Zemlya and Barents Sea and ways of utilizing favorable winds in trips by boat to and from Novaya Zemlya are described. Winds on Novaya Zemlya itself, currents in the Barents Sea, Kara Strait, etc., and barometric pressures are noted. A brief survey is made of bedrock geology, fossils, glacial deposits and raised beaches, present glaciers, coal beds, and frost boils in the frozen ground. A report by V. Rusanov from his geologic work in 1908 and 1909-1910, is included (p. 206-217).

33536. BÉNARD, CHARLES MARIE EUGÈNE PIERRE, 1867- . Projet d'expédition océanographique double à travers le Bassin Polaire Arctique. [Monaco], Imprimerie de Monaco, 1903. 34 p. 2 text maps, diagr. Text in French. **Title tr.:** Plan for a twofold oceanographic expedition across the arctic polar basin.

The organization of a proposed expedition is outlined to the Prince of Monaco. It is to comprise two ships which, 50-80 miles apart, would make soundings, take bottom samples, and make astronomical, oceanographic, and meteorological observations. The vessels would leave Tromsø in mid-July, and during the summer travel between land and the pack ice to a point north of the New Siberian Islands. In Sept. the ships would enter the ice pack to begin a drift across the Basin. Water circula-

tion in the Arctic Basin and North Atlantic is outlined. Construction and equipment of the two vessels are described and the expedition's budget is presented. It is not known that this plan ever materialized. **Copy seen:** DLC.

33541. BENIOFF, HUGO, 1899- . Evidence for world-strain readjustment following the Kamchatka earthquake of 4 November 1952. (Geological Society of America. Bulletin, Dec. 1954. v. 65, no. 12, pt. 2, p. 1332-33)

Continuation of the author's study (1953) of the seismogram of the Kamchatka earthquake. Disturbance of the mean position of the recording line only during the earthquake suggested further more detailed study. An enlarged copy of the seismogram, showing a number of very long period waves or oscillations was critically examined. Results are discussed.

33548. BENUM, PETER ALBERT, 1882- . The flora of northern Norway. (Norseman, Jan.-Feb. 1954. v. 12, no. 1, p. 33-37)

About 830 species of vascular plants are found in north Norway (Nordland, Troms, and Finnmark) 64°57'-71°11' N. lat. The influence of climatic changes following the last glacial period on the advance of plants to northern Norway is discussed in some detail. Many plants probably arrived from the south during the Boreal, Atlantic, and Sub-Boreal periods, the plant invasion ceasing with the sudden climatic deterioration about 500 B. C. Survival of some species in unglaciated refugia during the last glacial period and their present distribution is also discussed.

33549. BENVENISTE, E. The "Eskimo" name. (International journal of American linguistics, July 1953. v. 19, no. 3, p. 242-45) 10 refs.

Discusses (and rejects) Wm. Thalbitzer's theory (q. v.) that "Eskimo", "Esquimaux" was derived from the term *Excomminguois*, "the excommunicated ones," first used by the French Jesuit priests in 1605 to designate these people. Calls attention to an earlier name, "Esquimaues," hitherto unnoticed, given by the English geographer Richard Hakluyt in 1584. This is the oldest recorded name for the tribe. It is of Indian origin, derived probably from *Eskimantsik* (Abenaki) or *Ashkimeq* (Chippewa) "eaters of raw flesh," or possibly *Ayaskimewok*

(Cree) "those who do things in secrecy, the deceitful."

33551. BEREHOVAĬA, N. A. Nakonechniki garpunov iz drevnikh poselenii Baranova mysa; raskopki Kolymskoi ékspeditsii 1946 g. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Materialy i issledovaniia po arkheologii SSSR, 1953. no. 39, *Paleolit i neolit SSSR*, p. 421-45, 7 illus., text map) 46 refs. Text in Russian. **Title tr.:** Harpoon-heads from the ancient settlements of Mys Baranov; excavations of the Kolyma expedition, 1946.

Contains classification, description and dating of 29 harpoon heads, excavated on two small bays, Sarychev and Vostochnaia or Vtoraiia, on Point Bol'shoy Baranov, 69°47' N. 164°15' E. on the northeast Siberian coast between the Kolyma River and Chaun Bay. Three semi-subterranean dwellings with wooden framework were discovered, and a rich store of harpoon heads and potsherds, both frequently decorated, was unearthed. The harpoon heads are divided into two types, and are compared with those on the Chukotsk Peninsula and in Alaska. The culture of Mys Baranov has much in common with the Old Eskimo culture in those regions. Most of the Mys Baranov harpoon heads, including the 22 illustrated, are Birnirk types, and may be dated at the end of the first millenium A. D. It is concluded that this Eskimo-like culture, ancient and more recent, existed near the mouth of the Kolyma River for a very long time.

33553. BEREZKIN, VSEVOLOD ALEK-SANDROVICH, 1898-1946. Poteplenie v Arktike i usilenie tsirkulatsii vod Polarnogo basseina. (Morskofsbornik, Leningrad, Apr. 1937. t. 20, no. 4, p. 105-132, 8 sketch maps, graphs, 7 tables) 20 refs. Translated into English as: Warming in the Arctic and increase of water circulation in the Polar Basin, by D. Kraus. 39 p. mimeographed, Boston, Mass., Dec. 15, 1954, for Libraries Section, Air Force Cambridge Research Center, by the American Meteorological Society, under Contract No. AF 19 (604)-203.

"A great deal of data is presented to show the warming which is evident in Arctic waters during the past decades (1910-1930). The unusual feature of this presentation is the attempt to tie in an increase in the general circulation with the other factors which have been cited. The Iceland Low is shown to be deeper in the 1921-30 decade by -4.5 mb. and the Siberian High +3.2 mb. more intensive than normal. Scherhag's charts of N. Hemisphere circulation for 1911-1920 and 1920-30 are given as further proof. This increase in circulation is then tied in with an increase in oceanic circulation as well as melting of ice in bordering seas of the Arctic and the N. Atlantic."—*Meteorological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1077.

(with descript. letterpress). Text in German. *Title tr.:* The Northwest Coast of America: latest results of ethnological travels. From the collections of the Royal Museums at Berlin.

Contains illus. and descriptive letterpress of specimens selected from the first shipment of (more than a thousand) ethnographic objects sent home to the Museum by J. A. Jacobsen. After a preface by A. Bastian, the ethnic situation on the Northwest Coast is reviewed with numerous references to Tlingit myths (p. 1-12). Explanations to the plates (14 l.) are given by E. Krause and Dr. Grünwedel. The excellent illus. (about 60) show wooden masks and crests (in color), idols, carved houseposts, spoons and ladles, bowls and other wooden vessels, a dance dress, blanket, etc. Though the places of origin and names of tribes are often omitted, the objects evidently belong mainly to the Tlingits, Haidas and Tsimshians. Jacobsen collected for the Museum in this area during 1881-83. (*cf. Arctic Bibliography*, No. 7956). *Copy seen:* MH-P.

Presentation of a case in a man of 54, with some laboratory data, followed by a discussion of etiology of such hemorrhages; role of circulation and of cold; notes on two additional cases; etc.

Copy seen: DSG.

33569. BERNARD, RICHARD, and others. Mesure de la température normale des oiseaux au moyen de thermomètres à mercure. (Revue canadienne de biologie, Apr. 1944, v. 3, no. 2, p. 251-77, 5 fig., 5 tables, graph) 14 refs. Text in French. Summary in English. *Other authors:* R. Cayouette and J.-A. Brassard. *Title tr.:* Measurement of normal temperature of birds with a mercury thermometer.

Contains account of measurement in 450 living birds, belonging to 78 species, some North American Arctic. In general smaller species showed a higher but variable temperature. *Copy seen:* DSG.

33570. BERNE, ROBERT MATTHEW, 1918- , and E. D. ARMSTRONG.

Effect of hypothermia on the coronary circulation. (Federation proceedings Mar. 1953, v. 12, no. 1, pt 1, p. 15)

In dogs, coronary blood flow (CBF) fell progressively, as generalized hypothermia developed, and, "at low body temperatures CBF tended to be maintained despite hypotension and an increase in relative apparent viscosity." The effects of restoration of coronary perfusion pressure, of moderate acceleration of the cold heart and of epinephrine, are also reported. *Copy seen:* DLC.

33571. BERNE, ROBERT MATTHEW, 1918- . Myocardial function in severe hypothermia. (Circulation research, Jan. 1954, v. 2, no. 1, p. 90-95, illus.) 8 refs.

Contains an investigation by means of pulse contours, on the functional status of the myocardium of the dog. No evidence of myocardial failure was found on the basis of estimated criteria, but artificial cardiac acceleration proved to be dangerous in the hypothermic heart.

Copy seen: DSG.

33572. BERNHARD, C. G., and R. GRANIT. Nerve as a model temperature end organ. (Journal of general physiology, 1946, v. 29, p. 257-65)

"Rapid cooling of mammalian nerve initiates a discharge which is preceded by a local temperature potential, the cooled region being electronegative to a normal portion of the nerve." Heating has a similar effect. The mechanism of these "generator potentials" is considered as the prototype for temperature end organs.—Psychological abstracts, 1946, v. 20, p. 363-64. *Copy seen:* DLC.

Text in Russian. *Title tr.:* Main features of the historical geography of water transportation in the Ob' and Yenisey basins.

Paper delivered to the Moscow Branch of the All-Union Geographical Society on May 5, 1951. The rivers were the main routes of the Russian political and economic penetration into Asia, beginning with Novgorod merchants in the 12th century. The ways used to reach the Ob' and Irtysh from the Pechora River and by the Northern Sea Route, and routes to the Yenisey and Lena Rivers basins are traced. The central government's changes of attitude and prohibition (1620) of using the Northern Sea Route, conditions and development with progress and setbacks on the Siberian waterways, data on river vessels, goods and passengers are presented. The writer discusses the revival of the Northern Sea Route since 1864 (p. 243-44); impact of the Siberian railroad and the crisis in river transportation at the beginning of the 20th century; influence of the Russo-Japanese War, 1904-1905, and of World War I; ship-building in Siberia (p. 253); safety measures and improvement of river beds.

33576. BERREMAN, GERALD D. Effects of a technological change in an Aleutian village. (Arctic, Sept. 1954. v. 7, no. 2, p. 102-107, illus.)

In Nikolski a community of 56 Aleuts on Umnak Island, the large wooden dory, introduced by Americans, has superseded the bidarky, traditional one-man skin boat. Social and economic changes accompanying this shift are described. A self-sufficient economy based on sea hunting, traditional skills, and cooperative effort is replaced by individual dependence on cash income from outside, often unreliable sources. The breakdown in family mores and disintegration of village life is stressed. The study is based on information gathered in summer 1952 when author lived at Nikolski with a

party of anthropologists led by W. S. Laughlin, supported by Arctic Institute of North America and University of Oregon Graduate School

opportunity to test equipment under actual cold weather conditions; new navigation aids tried out. (Air Force, June 1946. v. 29, no. 5, p. 4-5, 47, illus.)

General account of the activities conducted during Operation Musk Ox, a test of Canadian and U. S. Army and Air Force equipment during 81 days travel, Feb.-May 1946, in northern Canada. New air supply techniques were developed, winterization of aircraft operating in sub-zero temperatures was studied, and navigational equipment used by the ground force and supply planes was tested. The C-47 cargo planes were equipped with Loran to take directional fixes and determine their exact location. Technical data on the functioning of Loran and other electronic equipment near the magnetic pole were collected by three specially equipped B-29s. Gliders were landed for the first time in the Arctic Circle. **Copy seen: DLC.**

33600. BIRD, JOHN BRIAN, 1923- Postglacial marine submergence in central arctic Canada. (Geological Society of America. Bulletin, May 1954. v. 65, no. 5 p. 457-64, 5 illus. on 2 plates, text map table) 19 refs.

Data were collected by the author (1) in Keewatin District, in the Baker Lake and Thelon River regions and along the Hudson Bay coast from Chesterfield Inlet to Repulse Bay, and (2) on Southampton and Coats Islands, in summers 1948, 1950 and 1952. Three methods of determining the upper marine limit are described. Measurements show that the sea reached a depth of 360-400 ft. in eastern Keewatin and 550-650 ft. on the islands. Glacial geology supports the hypothesis that the mainland was occupied by a separate ice lobe which remained after the islands were free of ice. In the upper and middle Dubawnt basins of western Keewatin, a submergence of 740 ft. or more is explained by the presence of a large glacial lake, formed when ice remaining in eastern Keewatin blocked east-flowing drainage. Wave action on unconsolidated material has modified the landscape of the submerged regions. Evidence indicates that the land is still rising.

33611. BLACK, A. N. Laplace points in moderate and high latitudes. (Empire survey review, Oct. 1951. v. 11, no. 82, p. 177-84, fig., 2 tables)

"A method of applying azimuth control to a survey is given, in which the precision with which the astronomical position must be determined is proportional to tan (altitude) instead of tan (latitude) as in the orthodox method. By using the method with stars of low altitude the observational difficulties are greatly reduced, especially in high latitudes. Methods of observation and reduction are discussed which make it possible to avoid altogether special

observations to determine the astronomical position."—Author's abstract.

33614. BLACK, ROBERT FOSTER, 1918—. Precipitation at Barrow, Alaska, greater than recorded. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 203-207, 2 graphs, 2 tables) 6 refs.

"During the winter of 1949-1950 data on depth and density of snow on the ground near Barrow, Alaska [Arctic Research Laboratory, four miles northeast of Barrow], revealed two to four times as much water equivalent as was

recorded with the standard eight-inch precipitation gage of the U. S. Weather Bureau. Indirect evidence on summer precipitation is greater than recorded. Wind effects are believed to be responsible for the difference in water equivalents and for an annual efficiency of the gage of 25 to 50 percent. Total precipitation thus may be more than 16 inches instead of about four inches as recorded. Other arctic stations in windy areas doubtless are similarly affected."—*Author's abstract*. Discussion by W. T. Wilson.

33615. BLACKADAR, ROBERT G. Geological reconnaissance north coast of Ellesmere Island, Arctic Archipelago, Northwest Territories. Ottawa, 1954. 22p. fold. map, 2 tables. (Canada. Geological Survey. Paper 53-10) 16 refs.

Observations were made by the author (assisted by two Greenlanders) Apr.-Aug. 1953, during the Canadian Defence Research Board Northern Ellesmere Ice Shelf Project led by G. Hattersley-Smith. The north coast between 61°-72°15' W. and part of the interior south of the coast to 82°15' N. was covered by sledge and on foot. Physical geography of the region is briefly noted. Precambrian (or early Paleozoic) to Miocene (or later) sedimentary and metamorphic strata, basic dikes, and gneisses with granitic and pegmatitic dikes are described; known fossils are Silurian to Miocene or later. Quaternary glacial deposits, patterned ground, and structural geology of the region are briefly discussed. Two beds of lignitic or sub-bituminous coal were found in the Eureka Sound group (Miocene or later) at 82°15' N. 67°30' W. Analysis of a sample is given.

33619. BLAIR, CHARLES F., Jr. Norway-Alaska via 90° north latitude. (Navigation, Mar. 1952, v. 3, no. 3, p. 78-80, fig.)

Description of precomputation methods for navigation over the North Pole in an F-51 Mustang on May 29, 1951 from Bardufoss to Fairbanks. Equipment included two Lear automatic direction finders, two VHF transmitters and receivers, an HF transmitter with trailing wire antenna, an HF receiver, a Lear L-2 automatic pilot, and a Link sextant. An astrocompass used in conjunction with a directional gyro was the primary steering aid. A Batori computer

provided quick reference drift angles and accurate true air speeds corrected for compressibility. Altitude curves for sun and moon were plotted, and pre-computed fixes for sun and moon for specific times and positions along the route. Sun azimuths for each hour of the flight were plotted.

Copy seen: DLC.

33620. BLAIR, DON. Summer voyage in Hudson Bay. (Beaver, Autumn 1954, Outfit 285, p. 30-37, 7 illus.)

33622. BLAKE, WESTON, Jr., 1930-. Vegetation and physiography of the Goose Bay area, Labrador, and the interpretation of forest cover types and landforms from aerial photographs. A thesis presented to the Faculty of Graduate Studies and Research, McGill University, in partial fulfillment of the requirements for the degree Master of Science. Montreal, Aug. 1953. 2 v.: 171, 112 p. 196 illus. (12 fold. in pocket), 23 maps (3 fold. separately), 5 tables. Typescript. approx. 150 refs.

Contains results of field work and aerial observations, May 12-20, Aug. 28-Oct. 12, 1952, Mar.-Apr. 1953, and study of aerial photographs in the Goose Bay region of Labrador. Project was sponsored by the Defence Research Board of Canada and assisted by the Arctic Institute of North America and the U. S. Office of Naval Research. Area mapped covers approx. 3,000 sq. mi. between 53°03'-54° N. 60°-61°07' W. Objectives of the study were: (1) to es-

establish ground-control for the aerial photographic interpretation of forest types and landforms in the region; (2) to prepare a map of the principal forest types which could be recognized from aerial photos and to provide a key for their interpretation; (3) to prepare a map to show certain landforms, with key for their interpretation, and to determine any relationship existing between these features and their forest cover. Subjects discussed are: rock types, geologic history, structure and physiography of the Labrador Peninsula, with particular reference to the Lake Melville region; local climatic conditions in the Lake Melville basin. Various forest classifications for the Labrador Peninsula are considered, with a detailed examination of the vegetation of the Goose Bay area; keys are offered for interpreting each cover type and main landforms. *Appendices* present lists of rocks and plants collected, also methods used to prepare maps. Vol. 2 contains the photographs arranged chronologically to follow the text of v. 1.

33623. BLAKENEY, THOMAS O'CONNOR, 1917- . The security of Alaska and the tundra army. (Military review, Sept. 1952. v. 32, no. 6, p. 3-12, illus.)

Logistics and manpower as the major issues in the security of Alaska are discussed. Water, river and tractor-train transport, bush flying, dog teams and signal communications are described. A solution to the existing lack of manpower is proposed by utilization of the native Eskimos, Indians, and Aleuts. A history of the Alaskan Territorial Guard, (Tundra Army), conceived in 1941 on St. Lawrence Island by an American major, is included. Inherent qualities of the Eskimo can serve as a foundation for training in patrolling and guerrilla tactics. "The Eskimo should become an important part of a military ground reconnaissance screen to our north and west." Problems of organizing and training native Alaskans, without interfering unduly with their normal way of life, are outlined.

BOAG, T. J., *see also* Brown, M., and others. The occurrence of cancer in an Eskimo. 1952. No. 33782.

33635. BOAS, FRANZ, 1858-1942. America and the Old World. (International Congress of Americanists. 21st, Göteborg, 1924. Proceedings, 1925. pt. 2, p. 21-28)

Contains discussion on cultural relations between the Old and New World. Individuals occur in northern Asia that might be mistaken for Indians; and some northwestern Indians bear an undoubted likeness to Asiatics. Anthropological studies show that man migrated to America after the establishment of the Mongoloid type. Many of the cultural elements that are widely spread in the Old World have found their way to America.

Copy seen: DSI.

33636. BOAS, FRANZ, 1858-1942. The Eskimo. (Ontario Provincial Museum, Toronto. Annual archaeological report, 1905, pub. 1906. p. 107-116) 5 refs.

Contains an ethnographic sketch of Eskimo culture: habitation, occupation, economic conditions, tools and implements, decorative art, social organization, family, religious beliefs, shamanism folklore, etc., referring mostly to the so-called Central Eskimos of Canada.

Copy seen: DSI.

33637. BOAS, FRANZ, 1858-1942. The Eskimo. (Royal Society of Canada. Transactions, 1887, pub. 1888. v. 5, section 2, p. 35-39)

Contains a sketch of the mythology and traditions of the Central Eskimos, based on observations among three Eskimo tribes, made during the writer's stay on Baffin Island in 1883-84. The Sedna legends, those on the moon and thunder, and traditions on the origin of Europeans are investigated.

Copy seen: DSG.

33638. BOAS, FRANZ, 1858-1942. An Eskimo winter. (*In:* E. C. Parsons, editor, American Indian life. New York, 1922, p. 363-78)

Contains a fictional account of how an Eskimo community may spend a winter on an island: tent and snow-house building, sealing on the ice and other hunting adventures, sickness of a child, his death and burial, Eskimos traveling, stories of families, etc.

Copy seen: DLC.

33639. BOAS, FRANZ, 1858-1942. First general report on the Indians of British Columbia. (British Association for the Advancement of Science. Reports, 1889, pub. 1890. v. 59, p. 801-900, illus, tables, plates x-xv) 11 refs.

Contains report of the general results of a reconnaissance made by the writer in the summer of 1888, under the auspices of the Committee of the British Association (noted below), supplemented by his observations from a previous trip in the winter 1886-87. The Tlingit, Haida, Tsimshian, and Kootenay (Kootenay) Indians are dealt with, also the Tlingits of southern Alaska. The report includes some population statistics of these peoples, their physical characteristics (with measurements of crania); brief account of their senses and mental characteristics; food, hunting and fishing, clothing, implements, and houses; more detailed information on their social organization, government and law, customs regarding birth, marriage, and death; religion of the Tlingits (Eskimo influence is noted) and Tsimshians; shamanism and secret societies. Grammatical material is given on Tlingit, Haida, and Tsimshian languages. Boas' report together with the introductory remarks of Horatio Hale (p. 797-801) form the Fifth report of the [B. A. A. S.] Committee . . . appointed for the purpose of investigating and publishing reports on the physical characters, languages, and industrial and social condition of the North-Western tribes of the Dominion of Canada.

33648. BÖCHER, TYGE WITTRÖCK, 1909- . Experimental taxonomical studies in the *Arabis holboellii* complex. (Svensk botanisk tidskrift, Mar. 1954. Bd. 48, häft. 1, p. 31-44, illus.) 8 refs.

Contains the results of cultivation experiments with this herb, carried out during 1950-54 in the Botanical Garden of the University of Copenhagen, with material from various regions, including one strain from East Greenland, seven from West Greenland, two from Yukon Territory and one from Alaska. The experiments showed that the *Arabis holboellii* complex includes rather distinct units which may be interpreted as species or at least subspecies. The Greenland population consists of triploid and diploids. The Greenland material as a whole differs from that originating from continental North America. *Arabis h. var. holboellii*, *A. h. var. tenuis* n. var. and *A. h. var. tenuis f. glabra* n. f. are described.

The discovery of gold in Alaska raised hopes of its occurrence in Chukotka, and a Russian-American expedition on the *Samoa* headed by the author sailed from San Francisco to Chukotka in 1900: it cruised during June-Sept. along the coast from Provideniya Guba to Kolyuchinskaya Guba and back, making prospecting trips ashore; many traces of gold were found, but no deposits of economic importance. Misunderstandings between Russian and American parts of expedition brought it to a premature end. The account of the expedition (p. 1-80) is followed by a brief survey of expeditions to Chukotka from Popov's in 1711 to Gondatti's in 1895 (p. 81-92); a summary of published information on the geomorphology (p. 92-108) and

geology (p. 109-162) of the peninsula with emphasis on prospects of gold; fragmentary notes on climate (p. 163-81) supplemented by a journal of the party's meteorological observations: atmospheric pressure, temperature, humidity, wind, cloudiness, and precipitation (p. 182-207). Populated places and local Eskimos and Chukchis (statistics, dwellings, clothing, economic conditions, trade with Americans) are noted (p. 62-70 and 208-226) with photo-illus. of coastal features, native life, etc. The story of the American purchase of reindeer for Alaska is told (p. 217-222). With the bibliography (33 Russian and foreign works), 19 (some of them unpublished) maps of the Chukotsk Peninsula are listed; a full geographical index is appended; also fold. plans (in scale 1:80,000) of parts of Kolyuchinskaya and Mechiginskaya Guba. **Copy seen:** DLC.

Brief, annotated bibliography (61 items) of elementary books for general readers, on geography of the Soviet Union; a few items on the arctic regions are included (p. 53-55, 63).

Copy seen: DLC.

33653. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Chukotskie rasskazy. Moskva-Leningrad, "Zemlia i Fabrika," 1929. 372 p. port. (V. G. Tan, *Sobranie sochinenii*, t. 1) Text in Russian. **Title tr.:** Chukotsk tales. (Collected works of V. G. Tan, v. 1) Pub. in 2 v. 1900, copy in PU.

Seven short stories: adventures, character and descriptive sketches, etc., based on author's experience and diary notes while living with the Chukchis for two years about the end of the 19th century. The numerous Chukchi words, ethnographic facts, etc., which occur throughout the text are explained or commented upon in footnotes.

In the introduction, Bogoraz, who was at one time as well known for his belles lettres published under the pseudonym of

V. G. Tan, as for his ethnographic work, characterizes the former, concluding: "They include not merely imagination but knowledge, scientific facts and complexes, even though these are in fictional form."—(p. 15).

Among Bogoraz's other works of the same type are *Kolymskie rasskazy* (Kolyma narratives), *Na tundrĕ* (In the tundra), *Zherthy drakona* (Victims of the dragon, English translation: *Sons of the mammoth*, N. Y., 1929); they were published in various editions, e. g. v. 1-3 of *Sobranie sochinenii V. G. Tana* (Collected works of V. G. Tan), Peterburg, "Prosvĕshchenie," 1910 (in DLC).

Copy seen: DLC.

33654. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Einsteĭn i religiĭa; primenenie printsipa otноситel'nosti k issledovaniĭ religioznykh ŭavlenii. vyp. 1. Moskva-Petrograd, Izd-vo L. D. Frenkel', 1923. 120 p. 20 illus., 48 refs. Text in Russian. **Title tr.:** Einstein and religion; application of the principles of relativity to the investigation of religious phenomena.

An attempt, in popular form, to apply the laws of the natural sciences in explaining the development and meaning of religious ideas, chiefly animism and shamanism, giving an interpretation of beliefs, myths, legends and folk art of the Chukchis, Koryaks, Yukaghirs, and Asiatic Eskimos. Some Chukchi and Asiatic Eskimo drawings of profane and magic character are presented and interpreted. This booklet is a fuller Russian version of the writer's *Ideas of space and time* . . . 1925 (*Arctic Bibliography*, No. 1886).

Copy seen: DLC.

33655. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Idĕes religieuses des tchouktchis. (Sociĕtĕ d'anthropologie de Paris. Bulletins et mĕmoires, 1904. sĕr. 5, v. 5, no. 3-4, p. 341-55, 3 illus.) Text in French. **Title tr.:** The religious ideas of the Chukchis. Translated from Russian and presented by J. Deniker.

Contains outline of Chukchi religious beliefs presented according to five supposed stages of development from the idea of animated nature to the conceptions of human soul(s) and numerous spirits, good and evil (their names and characteristics given). Several Chukchi expressions on their beliefs are quoted.

notes on cosmogony, sacrifices, festivals, shamanism, etc., are included. Critical discussion by G. Papillault is appended.

33657. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Koronatsiia v Kolymskû; iz vospominanii. Rostov, Tip. "Donskaia Riech", [190?] 30 p. Text in Russian. *Title tr.:* Coronation in the Kolyma region; from reminiscences.

Contains a sketch of the life of political deportees in Sredne- and Nizhne-Kolymsk, their relations with the local Russian and native population, also the types and behavior of administrative officials. The events described refer to 1893, the fourth year of the writer's exile in this region (he was banished for ten years). Mention is made not of a coronation, but of the impression created by news of the death of the tsar (Alexander III, 1845-1894).

Copy seen: DLC.

33658. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Kratkii otchet ob izsledovanii chukoch Kolymnskago kraia. (Vsesoiûznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia, 1899. t. 30, no. 1, p. 1-51, fold, map) Text in Russian. *Title tr.:* A brief report on an investigation of the Chukchis in the Kolyma District.

Contains a summary of characteristics of the Chukchis (p. 4-49); their territory and camping places, migration, language and grammar, folklore, anthropologic type, diseases (arctic hysteria unknown), character (sudden anger, suicide and homicide), religion and rites, shamanism, family and clan relations, social organization and *ûsak* (tax to Russians), juridical norms and crimes, occupation and economy, trade, also relations with other nationalities. The Chukchis still consider themselves an unsubjugated people, superior to the

Lamuts, Tungus, and even to the Russians.

This is preceded (p. 1-4) by a summary of the writer's field work between Feb. 10, 1895, and Oct. 25, 1897, as a member of the Sibirâkov Yakutia Expedition. He made five trips, traveling in all some 12,000 versts, and lived for months with the nomadizing Chukchis in the basins of the Omolon and Bolshoy Anyuy, and on the Kolyma River between Sredne-Kolymsk and Zaliv Kolymskiy. With Lamut or Chukchi interpreters, he investigated the language, ethnography and anthropology of Chukchis and Lamuts, also Russian old settlers in Sredne- and Nizhne-Kolymsk. He learned the Chukchi language sufficiently to collect folklore, also material for a dictionary and grammar. The collections, notes, etc., which he brought home (24 lots) are listed (p. 49-51). The principal results of this (with subsequent) work were published in English (except, of course, the dictionaries) c. f. *Arctic Bibliography*, No. 1876, 1877, 1896, 20787.

Copy seen: MH.

33659. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Kratkii putevoditel' po vystavke "Chukotskoe obshchestvo". Leningrad, Izd-vo Akademii nauk SSSR, 1934. 22 p. Text in Russian. *Title tr.:* A short guide to the exhibit, "The Chukchi society."

Contains description and comments on an exhibit planned to show the colonization policy of the tsarist regime, the types of Chukchi economy, their social organization and ideology, and the new policy of the Soviet government. The exhibited objects were collected at the end of the 19th century. Historical data and statistics are included. *Copy seen:* DLC.

33660. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Mezhdunarodnoe soveshchanie po planu ustroistva ékspeditsii v polârnol' zone. (Étnografiia, 1929. god 4, kn. 7, no. 1, p. 103-107) Text in Russian. *Title tr.:* The international conference for planning expeditions to the polar zone.

Contains report on a meeting held in New York, Sept. 1928, at which the United States, Canada, Denmark, Sweden, and the U.S.S.R., were represented by leading ethnographers. Planning of future work and need of international cooperation were discussed. The results of the Fifth Thule 1921-24 and the Yakutia 1925 expeditions were reported.

The great interest in investigation of the Asiatic Eskimos and Chukchis was stressed; the writer as representative of the U.S.S.R. stated, however, that such work would be carried out by Russian scholars without foreign aid. Western representatives desired to see Russian scientific works published in some more accessible language; Bogoraz' answer was that they should learn Russian. The meeting did not come to any conclusive decisions. *Copy seen: DLC.*

33661. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Narodnaia literatura paleoziatov. (In: Vsemirnaiia literatura; literatura Vostoka, sbornik statel. Peterburg, 1919. vyp. 1, p. 50-68) Text in Russian. *Title tr.:* Folk literature of Paleo-Siberians.

Contains characteristics of Chukchi, Gilyak, Koryak, and Yukaghir folklore; selected specimens and comments are given; legends and tales, narratives on shamanistic visions, magic incantations and lyric songs are analyzed. The originality of Paleo-Siberian folklore is emphasized: no traces of Turcic (Yakut) or Finno-Ugrian influence. Chukchis and Yukaghirs, however, have adopted some Russian tales and songs, and distinguish them as such. The influence of environment and climate upon a people's fancy and creative power is noted and parallels drawn between epics of the Chukchis and Icelandic sagas. Various themes are mentioned with comparison of treatment by the Chukchis, Koryaks and Yukaghirs. The great artistic value of this traditional literature from the far North is stressed. *Copy seen: DLC.*

33662. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936, and V. I. JOCHELSON. O Sibirskom Polarnom Otdelê Siêvero-Tikhookeanskoi êkspeditsii. (Zhivaiia starina, 1900. god. 10, vyp. 1-2, p. 295-96) Text in Russian. *Title tr.:* On the Siberian Polar Section of the North Pacific Expedition.

Contains excerpts from a letter (dated: San Francisco, April 16, 1900) to the President of the ethnographic section of the Russian Geographical Society. A plan for the anthropological, ethnological and linguistic investigation of Chukchis, Koryaks, and Yukaghirs is outlined; and details are given on the organization, equipment and routes of this section of the expedition, sponsored by M. K. Jesup

of New York, to study migrations between Asia and North America.

Copy seen: DLC.

33663. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Olenevodstvo, vzniknovenie, razvitiie i perspektivy. (In: Problema proiskhozhdeniia domashnikh zhivotnykh, vyp. 1, p. 219-51, 2 maps on plates. Akademiia nauk SSSR Institut genetiki. Trudy, 1933) Text in Russian. Summary in English. *Title tr.:* Reindeer breeding; its origin, development and prospects.

Contains discussion of the entire subject from the ethnological and economic points of view. Originally the reindeer was a game animal, formerly hunted in prehistoric Europe and Asia, and still hunted in some northern regions, e. g. in the Barren Grounds of Canada, by the Caribou Eskimos. The races of domesticated reindeer, the animals' food and care in winter and summer, the cultural characteristics of reindeer breeders, products and by-products of the reindeer industry, economic types of the reindeer household (tundra and taiga types), and social differentiation in the reindeer-breeding society are discussed. "Problems of the liquidation of reindeer feudalism" are noted. Many references are made to the Chukchi reindeer economy. Use of dogs as draft animals preceded the domestication of reindeer; the latter progressively spread from southwest to northeast, from the Sayan Mts. to the Bering Sea. Its origin cannot be derived from an imitation of the cattle and horse breeding of some more civilized peoples, as claimed by the Vienna school of ethnologists. *Copy seen: DLC.*

33664. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Russkie na rîkê Kolymê. (Zhizn', June, 1899, no. 6, p. 103-125, plate) Text in Russian. *Title tr.:* Russians on the Kolyma River.

Contains a short history of Russian colonization of far northeastern Asia, and, from author's observations during 1890-1898, an account of the life of the Russians (about 1,120) settled between Sredne-Kolymsk and Nizhne-Kolymsk. They are Cossacks, fishers and merchants; their occupations, and the economic conditions, food (mostly fish) and frequent famines, are indicated. The Russians' physical appearance, and their relations with Yakuts, Yukaghirs and Chukchis are described. Communication

is by boat and dog sledge. The social classes, hospitality, and loose morals are noted, as is the health situation (syphilis, smallpox and arctic hysteria are common), and superstitions (respect for the bear, beliefs in spirits and souls). These Russians have a local dialect with Yakut influences, and a love of music and songs, the latter being influenced by the Yukaghirs, etc. **Copy seen:** DLC.

33665. BOGORAZ, VLADIMIR GERMANOVICH, 1865-1936. Shamanstvo. (In: *Entsiklopedicheskii slovar' russkogo bibliograficheskogo instituta* Granat. Moskva, [1933-]. 7th ed. t. 49, col. 55-64) 12 refs. Text in Russian. **Title tr.:** Shamanism.

Contains characterization of shamanism as animism in praxis and cult; relations between shamanism and magic are also outlined. The psychology of shamanism and its origin, the role of hysteric persons, sex perversion and L. I. A. Shternberg's theory, are discussed; also dealt with are the shaman's vocation and period of preparation, ranks and categories of shamans, the shamanistic performance with singing, drumming and tricks, etc. The female shamaness is considered to be of older origin than the male. Many references are made to Chukchi shamanism. **Copy seen:** DLC.

33666. BOGOROV, VENIAMIN GRIGOR'EVICH, 1904- . Ta'ny bol'shikh glubin. (Nauka i zhizn', Aug. 1954. v. 21, no. 8, p. 14-16, illus., plate) Text in Russian. **Title tr.:** Mysteries of the great depths.

Popular account of the 1953 operations under L. A. Zenkevich of the research vessel *Vitiaz'*, exploring the northwestern part of the Pacific in the area of the Kuril-Kamchatka bottom depression (Tuscarora Deep), work initiated in 1949 by the Institute of Oceanology of the Academy of Sciences. Fourteen

scientific laboratories were accommodated on the *Vitiaz'*, and the ship has the most up-to-date equipment for deep-sea investigations, such as special nets, trawls, bathometers, bottom samplers, etc., and a unique and powerful winch which operates with 14 km. of wire. The main discoveries of these expeditions are: (1) the Kuril-Kamchatka depression is a fissure 5 km. wide and 500 km. long, on the average 4 km. deeper than the sea bottom on both its sides, and it is connected with the Aleutian Trench; (2) its greatest depth reaches 10,382 m.; (3) organic life exists at all depths; (4) food-stuff for the deep-water organisms is transferred from the upper sea strata by organisms living at the intermediate levels. **Copy seen:** DLC.

Recommendations and description of equipment for winter trips in arctic and subarctic regions, based on author's experience in Kola Peninsula and Northern Ural: foot-, hand- and head-gear including face-mask, implements, portable stoves, tents and their erection, blankets, skis, sleds, food.

Copy seen: DLC.

33672. BOLGER, E. J. Unwatering Eldorado mine; an ingenious method of mounting the pumps used in unwatering a flooded mine confirms its almost universal applicability by its excellent results under unusual and adverse conditions. An extraordinary efficiency was attained even though the project was carried out in the depth of an arctic winter, and in operational conditions peculiar to the permafrost area. (Canadian mining journal, Nov. 1952. v. 73, no. 11, p. 74-79, 4 fig. incl. map, diagr., plan)

Describes the unwatering of the Eldorado Mine workings at Port Radium on the east shore of Great Bear Lake, in the District of Mackenzie, when the mine was reopened in 1942. Covers

previous work, factors affecting the problem, solution conceived, equipment assembled, pumping, the skip, pumping equipment, power delivery, service equipment, installing permanent pumps, air lift booster, operating incidents, points of special interest, and staff and communications. **Copy seen:** DLC.

33674. BOLOTNIKOV, NIKITA Ĭ. Nikifor Alekseevich Begichev. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 335-48, illus., port.) Text in Russian.

Contains a biographical sketch of this sailor and self-made explorer of the Arctic. He took part in the expedition of E. V. Toll on the *Zariâ* in 1900-1902, and in 1903 participated in the search for Toll. He settled in northern Siberia in 1906 and discovered two islands in Khatanga Bay which now bear his name, Bol'shoi and Malyy Begichev. In 1915 he was in the charge of the relief party which evacuated sick sailors from the ice-bound *Tatmyr* and *Valgach*, and took part in the search for the two lost members of the *Maud* expedition in 1921-22.

33675. BOLOTNIKOV, NIKITA Ĭ. Sud'ba bluzhdaiushchikh ostrovov. (Znanie-Sila, Nov. 1954. no. 11, p. 6-11, illus., col. plate) Text in Russian. **Title tr.:** The fate of the wandering islands.

A popular account of the hypothetical lands problem: discovery of Sannikova,

Gillis (Giles), Andreeva, and other lands and failure to find them later; hypotheses explaining their disappearance, and the solution of the mystery by discovery (claimed for Soviet flyers) of floating ice islands. The article begins with a free-style report of E. V. Toll's address to the Russian Geographical Society urging that an expedition be sent to search for Zemlya Sannikova; it ends with a report on the address by the Chief of the Main Administration of the Northern Sea Route, V. F. Burkhanov, delivered in February 1954, to the Moscow Branch of Geographical Society of U. S. S. R. on floating ice islands, their drift and alleged American attempts to use them for military purposes. Text maps show the routes of various expeditions and flights over the area of Zemlya Sannikova (p. 9); and the drift of ice islands in the Arctic Basin with indication of four localities of their origin (p. 10); on the back cover of this journal is a schematic map which includes also the routes of drifting stations "North Pole-1, -2, -3, and 4."

33678. BOMSHTĖIN, G. Fol'klornye materialy v rabote S. P. Krashenninnikova "Opisanie zemli Kamchatki". (Sovetskaiā étnografiā, 1950, no. 2, p. 142-58) Text in Russian. **Title tr.:** Folklore materials in S. P. Krashenninnikov's work, *Opisanie zemli Kamchatki*.

Kamchadal folklore is discussed as it was presented in this famous work (*Arctic Bibliography*, Nos. 9266-68), especially in vol. 2, part 3 of the second edition of 1786. Its rich materials on myths and legends of origin, gods and spirits, hunting and fishing customs, feasts and ceremonies of the life cycle, dances and songs, etc., as observed about 1730-40, are sketched here. Influenced by Lomonosov, Krashenninnikov considered folklore not mere tales and superstitions of the uneducated, but an important factor in the life of a people, deserving, therefore, of serious attention and possibly a help in explaining various problems. Krashenninnikov's treatment of folklore may be called scientific, and outstanding for his time: he noted carefully the place and time of his observations and recordings, made occasional comparisons with folklore of other peoples, gave characteristics of different folklore genres and their function in the life of Kamchadals, etc. On certain points he disagreed with Steller's reasoning. **Copy seen:** DLC.

33683. BONDARTSEV, APOLLINARIĖ SEMENOVICH, 1877- . Trutovyie griby Evropeiskoi chasti SSSR i Kavkaza.

Moskva-Leningrad, Izd-vo Akad. nauk, 1953. 1106 p. illus. (172 figs.), 188 plates. (Akademiia nauk SSSR. Botanicheskii institut) about 250 refs. Text in Russian. **Title tr.:** Polyporaceae of the European sections of the U. S. S. R. and Caucasus.

Comprehensive reference work on the polypores, the bracket or shelf fungi. Introductory survey of their economic importance (p. 9-17) is followed (p. 18-116) by a presentation of their systematics, morphology, anatomy, ecology, and geographic distribution. Timber decay caused by them, their control, methods of collecting, storing and determining them are given. In the special part (p. 117-680) are keys to the species, and descriptions of about 300 species and 200 varieties and forms in the European U. S. S. R.; synonyms, references, illustrations, microscopical data, critical notes are offered, as well as data on economic importance (host plants, diseases caused), and geographic distribution. A few species, native to Kola Peninsula, Arkhangel'sk province and the Northern Ural are included. The distribution in Siberia and in other countries is noted. A color scale with Latin and Russian names useful in identification of these fungi, an extensive bibliography, indexes to subject and Latin names are appended (p. 681-725), as well as 188 plates with descriptive letterpress illustrating the forms, hosts, etc.

freddo. (Biochimica e terapia sperimentale, 1938. v. 25, p. 101-106, illus.) 12 refs. Text in Italian. Summary in French, English, German. **Title tr.:** Sensitivity to the action of adrenalin in animals exposed to cold.

Cats narcotized with Dial and exposed to low temperature (2° to 5° C.) showed an increased sensitivity towards adrenalin, revealed by isotonic contractions of the nictitating membrane. Possible interpretations of the phenomenon are discussed. **Copy seen:** DSG.

33686. BORET, WILLIAM. Russian airmen's part in new North Pole bid; problem of landing scientists. (Aeropilot, May 1937, v. 4, no. 5, p. 116, 137, illus.)

Russian interest in reaching the North Pole by air and landing a party of scientists for extended studies is described. T. Stepnev, a Soviet arctic aviator, suggests landing scientists, with two years' equipment and provisions, near the Pole by parachute; another, M. V. Vodop'ianov, first to fly from Moscow to Rudolf Island in 1936, suggests landing of heavy aircraft at the Pole with equipment and provisions for one year. The planes would return to base and a year later scout for the drifting party and relieve it with a new group of scientists. The ANT-25 is the aircraft, and Rudolf Island the base proposed for this exploit, it became the Soviet drifting station "North Pole"-1, 1937-1938.

33700. BOWERS, PETER M. Seaplanes on snow. (Air facts, Jan. 1954. v. 17, no. 1, p. 19-22, illus.)

Contains description of landing and take-off procedure of seaplanes and flying boats on snow and ice, commonly practiced in Canada and Alaska. Soft or mushy snow is best suited for seaplane landing and take-off; wet snow packs under the weight of the floats, and only a few inches are required to allow landings on paved runways. At least one foot of powder snow is required for safe landings in light aircraft. Normal water landing procedure is used when the snow is deep enough to cover all obstacles. Taxiing requires special techniques, whereas take-offs differ little from normal procedure. The effect of snow and ice on the floats themselves is negligible provided reasonable care is taken to avoid frozen ruts and solid matter. *Copied seen:* DLC.

33701. BOWLES, K. L. VHF auroral and meteor echoes including simultaneous observations. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 375)

Contains abstract of paper presented at the 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. Auroral echoes were observed at College, Alaska ($64^{\circ}51'\text{ N. } 147^{\circ}50'\text{ W.}$), close to the center of the auroral zone, using SCR270 radar at 106 mc/sec. Results show: that echoes are found only within a sector slightly wider than one quadrant, centered on geomagnetic north; that ranges between approx. 500-1000 km. are found; and that no vertical incidence echoes may be obtained from the various forms of aurora when seen overhead. Possible relationship of rate and strength of meteor echoes to presence of aurora is noted. *Copied seen:* DGS.

33702. BOYÉ, MARC, and A. CAILLEUX. Inland ice crystal measurement at Ege, West Greenland. (Journal of glaciology, Apr. 1954. v. 2, no. 15, p. 324-30, text map, diagr., 2 graphs, 3 tables) 11 refs.

Measurements were made in the Ege region near Port Quervain (69°42'56" N. 50°07'50" W.) on the western border of the icecap during the first French Polar Expedition of P.-É. Victor. "Four rubbings were taken of an area of about 400 sq. cm. on the western ice wall of a marginal crevasse parallel to the ice cap boundary. A mean crystal diam. of 2.16 cm. was measured where the ice velocity was 0.10 m./day. Melting, active ice crystals tend to have homogeneous dimensions with a mean diam. of 2-2.4 cm."—SIPRE. Comments on the paper are made by A. Renaud.

33703. BOYLE, ROBERT WILLIAM, 1920- . The shear zone systems of the Yellowknife greenstone belt. (Canadian mining journal, June-July 1954. v. 75, no. 6, p. 59-64; no. 7, p. 69-75, illus., text maps, diagrs.) 14 refs.

First article in a series on geology and geochemistry of the gold ore deposits of the Yellowknife greenstone belt, Mackenzie District. Two categories of shear zones are recognized: (1) relatively simple structures paralleling the lava flows in strike and dip, and (2) highly complex structures transecting the lava flows. Principal economic ore bodies occur in zones of the second category. The shear zones are probably thrust faults formed by compressive forces during the general diastrophism in the area. Main shearing action along the principal systems occurred after the emplacement of the granitic bodies.

Second in a series of articles. The large ore bodies of the region have been developed along complex shear zone systems transecting the lava flows; the three important systems are described. The

ores appear to have been localized at junctions of shear zones and at flexures in the strike and dip of these zones. Repeated movements and adjustments along the zones produced low pressure (dilatant) areas toward which mineralizing solutions moved and deposited mineral matter.

33706. BRADFORD, WILLIAM, 1823-1892. Arctic scenes: ice. 2 l., 47 plates.

Forty-seven photographs taken by two members of J. W. Black studio, Boston, for William Bradford, the landscape artist, during the course of a voyage to Labrador in summer 1864, with the schooner, *Benjamin S. Wright*. Bradford planned the cruise to acquaint himself with arctic scenery, particularly the different forms and aspects of sea ice. The photographs, without explanatory text, represent bergs, floes, fields and other floating, also shore ice, and a few unidentified coastal regions. They are introduced by a brief characterization of Bradford's work as an artist, and a tribute to Rear-Admiral E. H. Smith ("Iceberg Ed") for his contributions to arctic studies. These photographs have been made from the negatives presented to the Library of Congress by Copley Amory, who gave also, in 1942, an album (entitled "Photographs of arctic ice") of the original albumen prints.

materials for farm and home construction. Palmer, Nov. 1953. 20 p. 13 fig., 5 tables. (Alaska. University. Agricultural Experiment Station. Bulletin 17)

Contains description of the experimental procedure and results of a study made in Alaska to compare conventional construction with two basic methods of utilizing native lumber. The methods consisted of (1) logs sawed and squared on three sides, and (2) unfinished sawed lumber with either moss or sawdust insulation. Effects of a properly installed vapor barrier (to retard flow of water vapor through walls, floors and ceilings) on heating requirements, air infiltration, and vapor loss was the most important single observation made. Results showed a reduction of 66 percent in air leakage through walls, a decrease of 41 percent in moisture required to maintain a comfortable humidity, and a reduction of 22 percent in heat required to maintain a comfortable temperature. Moisture condensation, icicle formation, and glaciering were prevented by the cold-roof design. Sawdust appears to be a better insulator than packed, native moss, and walls of unfinished lumber with either insulation appeared somewhat superior to those of logs sawed and squared on three sides.

33730. BRITVIN, V. V krasnom chume na ostrove Kolguev. (Kul'turno-prosvetitel'naiâ rabota, Nov. 1947. god 8, no. 11, p. 32-34, port.) Text in Russian. *Title tr.:* In the red tent on Kolguev Island.

Contains an account of how this institution of Soviet propaganda works in the far North. The "red tent," with some 20 sq. m. floor space, is made of plywood, covered with reindeer skins and tarpaulin; easy to assemble and dismantle, and easily transported by seven or eight reindeer sledges. Its equipment consists of a table, iron stove, some books, musical instruments and games. The writer (a

Russian), for eight years keeper of the "red tent" on Kolguev Island, gives a sketch of nature, climate, and living conditions on the island the year round. The "red tent" keeps moving from one to another of the 15-17 native reindeer camps on the island. The Samoyeds come to the tent for pastime and they get political and cultural indoctrination. The village of Bugrino, the only permanent settlement on the island, has the institution of the "red corner" (Krasnyi ugol); this consists of a reading room and a hall, equipped with a radio receiver, movie projector, phonograph, some books and journals (mail comes once a year), musical instruments, billiards, chess and checkers. Collective reading of books and radio listening is carried on, news is given out; executive orders received by radio, are duplicated and distributed. Sporting activities are organized, e. g., archery, reindeer races, etc.

33731. BRÛKHANOV, A. F. Lesnoe olennoe khoziaistvo Severnogo kraia. (Sovetskoe kraevedenie, Oct. 1936. no. 10, p. 33-46, tables) Text in Russian. *Title tr.:* Forest reindeer husbandry in the Northern Province.

In contrast with the nomadic tundra husbandry, in which annual herd migrations of many hundreds of kilometers are an essential factor, the forest reindeer husbandry in the Mezen' River basin is relatively settled or semi-settled. It involves a twelve thousand-head herd, with an annual yield of 157 tons of meat and 2,400 hides. The origin of this industry and its economic significance for the Northern Province are discussed; the biological features of the forest reindeer and the annual cycle of its husbandry are described. The advantages of collectivization in sovkhoses and kolkhozes are stressed, although (at that time) individual owners might possess up to 200 head.

Hunting provides fur for export and domestic needs, increases food resources, plays a significant role in the economy of the Far North; and it is a means of militarizing the local population. Its

development is influenced by acclimatization of such fur-bearers as muskrat, Kolyma and Kamchatka marmot and suslik, by fur farming in kolkhozes and by collectivization of the hunting industry. Fur production in 1934 increased 150 percent over that of 1931.

33733. BRÛSOV, ALEKSANDR ÆKOVLEVICH, 1885- . *Istoriia drevnei Karelii*. Moskva, 1940. 320 p. incl. 165 text illus. and 23 tables, 5 maps. (Moskva. Gosudarstvennyi istoricheskiĭ muzei. Trudy, vyp. 9) about 400 refs. Text in Russian. *Title tr.*: History of ancient Karelia.

A monograph on Karelia's prehistory. Archeologic finds to date are discussed and evaluated with reference also to northern Scandinavia and the northern part of European Russia. The problem of the first peopling of Karelia by primitive hunters, the petroglyphs of Besov Nos, the bronze age in Karelia, etc. are investigated. *Supplements* contain an archeological bibliography to 1935 (369 items) for all the European Russian North; description and illustrations of 216 archeologic monuments, discovered in Karelia until 1936 (p. 206-248); a list of 227 archeologic monuments, in the former Governments of Arkhangel'sk, Vologda, Murmansk, and part of Leningrad (p. 249-64); detailed description (with illustrations and maps) of three important and recently discovered sites near Petrozavodsk (p. 265-98); four archeologic maps of Karelia; and a collection of illustrations (16 plates) of artifacts belonging to the Karelian culture and dated from 3000-1000 B. C. to our era.

33734. BROCKAMP, BERNHARD, 1902- . Nachtrag zu den wissenschaftlichen Ergebnissen der Deutschen Grönlandexpedition Alfred Wegener. (Neues Jahrbuch für Geologie und Paläontologie. Abhandlungen, 1951. Bd. 93, p. 177-232, 11 tables (incl. 4 fold.), graphs, map, profiles, diags.) 53 refs. Text in German. *Title tr.*: Supplement to the scientific results of the German Greenland Expedition of Alfred Wegener.

"Atmospheric pressure and temperature values obtained [in 1930-31] between the coast [Weststation, 71°12' N. 51°07' W.] and center of the icecap [Eismitte, 71°12' N. 39°53' W.] were used to calculate barometric altitude. The

altitude of the center was found to be 3033 m. The firm temperatures are shown to depend only on the altitude and not on the distance from the margin. A temperature decrease of approximately 0.8/degree between 65° and 75° N. lat. is indicated. Reflexion measurements show the firm thickness to vary from approximately 50 m. at the 42 km. mark to 350 m. at the center. The ice temperature at a depth of 150 m. was calculated to be -18° C. using the velocities of elastic waves in glacier ice. The elastic constants and the plasticity of ice show a dependency on the temperature. The temperature distribution observed above the melting layer is attributed exclusively to internal thermal sources (friction)." —SIPRE.

The principal scientific results of the expedition are listed as *Arctic Bibliography* No. 3920, and the main narratives, No. 19234 and 5641.

33735. BROCKINGTON, LEONARD W., 1888- . By North Star to the North Pole. (Canadian geographical journal, Nov. 1954. v. 49, no. 5, p. 218-22, illus.)

Radio broadcast giving account of a conducted flight of foreign ambassadors from Ottawa to Churchill Mar. 27, 1954; and impressions from flight of a smaller party of Canadian and American officials Mar. 28-30, 1954, from Churchill to Resolute Bay; then to the North Pole and back; thence to Thule; from Thule to Goose Bay and back to Ottawa. Members of the party included B. Claxton, Canadian Minister of National Defence, D. Stuart, U. S. Ambassador to Canada, G. Robertson, Deputy Minister of National Resources, Canada, and Squadron Leader K. R. Greenaway, navigator of the North Star aircraft. Excerpts from tape recordings of observations made by the aforementioned while flying over the Pole are included, as well as brief impressions gained at Churchill, Resolute, and Thule.

Contains an annotated list and a table of measurements (males and females) of four geographic races of the western flycatcher of North America. *Empidonax difficilis difficilis*, inhabiting woodland areas of the Pacific coast from south-eastern Alaska to northern Baja California, is included.

Copy seen: DSI; MH-Z.

33738. BRODNEV, M. M. Ot rodovogo stroia k sotsializmu; po materialam Iamal'-Nenetskogo natsional'nogo okruga. (Sovetskaiâ étnografiâ, 1950. no. 1, p. 92-106) Text in Russian. **Title tr.:** From the clan system to socialism; based on materials from the Yamal-Nenetskiy National District.

Contains a sketch of the former social organization and conceptions of property and ownership among the Samoyeds of the Yamal Peninsula, and how these affected the "new order," or collective economy, gradually established during 1933-1943. The Samoyeds of Yamal were divided into two strongly exogamic phratries with 15 and 20 clans, of which names and territories are indicated. Hunting and fishing grounds and pastures were the property of the clans, and the latter's rights were observed as late as 1936. The first kolkhozes were organized within the boundaries of clans. The old custom of communal fishing and joint herding of reindeer aided promotion of the idea of kolkhozes and artels. The impediments lay in the authority of the old people and shamans who were against everything new, in rules of exogamy, division of work between the sexes (e. g. women refused to have anything to do with the fishing industry as it was not woman's work), numerous taboos for women, e. g., against touching hunting or fishing implements

and tools. The "class struggle" was invoked, when several Samoyeds, who lost their reindeer herds, worked for their more fortunate kinsmen and felt themselves to be exploited. By 1948, up to 97.3 percent of all property was collectivized, and the "big owners" and shamans were exterminated. Private ownership, however, was restored in 1945 to the extent of the foreman getting every fifth newborn reindeer calf as his personal property and the herders every third. Attempts are made to cultivate potatoes and cabbages, to raise sheep and to do fox farming. Medical and veterinary help is improved and illiteracy diminished, it is claimed, several technical schools having been opened in Salekhard.

33740. BROLIN, SVEN ELOV. A study of the structural and hormonal reactions of the pituitary body of rats exposed to cold, illustrating the regulatory influence of the anterior lobe on the thyroid gland. Lund, 1945; Basel-New York, 1946. 165 p. illus., tables, 2 col. plates. (Acta anatomica. Supplementum 3) about 200 refs.

Contains an extensive study of the cellular and hormonal reactions of the pituitary in its relation to the thyroid, in rats exposed to low environmental temperature. Consecutive sections deal with introduction to the problem and earlier work; material; methods; reactions in normal rats exposed to cold; production of thyrotrophic hormone in such rats; thyroidectomized, and normal rats treated with thyroxine in low environmental temperature; cervically sympathectomized rats exposed to cold; rats with transected hypophyseal stalk in low ambient temperature. **Copy seen:** DLC; DSG.

1922, Bull. no. 755, 1924, p. 51-56;

1923, Bull. no. 773, 1925, p. 63-69)

Summary by the geologist-in-charge, of each year's work and of the field operations of the topographic, engineering, and geological parties in the specified

years in various parts of Alaska. Maps showing distribution of mineral deposits are included in reports for 1904, 1911, 1913, 1916, 1919; and one of metalliferous deposits only, in that for 1910.

The reports for 1917 and 1918 (Bull. 692, 712) were made by G. C. Martin; and those for 1919 and 1922 (Bull. 714, 755) by Brooks and Martin together. Brooks died in 1924; he was succeeded as chief Alaskan geologist by Philip S. Smith, q. v., who continued the *Administrative report*. *File seen:* DLC.

33743. BROOKS, ALFRED HULSE, 1871-1924. The Chisana placer district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 309-320, 2 maps, 1 fold.) 8 refs.

Summarizes the available data on the geology and mineral resources of the district (approx. 62°10' N. 141°55' W.) in the headwater region of the Chisana (Shushano) River northeast of the Wrangell Mts. in southeastern central Alaska. The history of explorations in this district is given, together with a description of the geography, means of communication, industrial conditions, and the geology. The mineral resources include both lode and placer copper and gold deposits, all of which are described.

33744. BROOKS, ALFRED HULSE, 1871-1924. The future of Alaska mining. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1919. Bulletin, 1921, no. 714, p. 5-57, 3 plates, 1 fig.)

Discusses the occurrence, development, production and future possibilities of the many mineral resources of Alaska: gold, copper, silver-lead, tin, platinum, antimony, tungsten, quicksilver, chromite, nickel, molybdenite, bismuth, iron, coal, peat, petroleum, structural materials, water, gypsum barite, graphite, sulfur, potash, garnets, limestone, clay, pumice, marble, jade, and building stones. Map (plate II) in scale 1:5 million, approx. 80 mi.:1 in., shows distribution. Concludes that the Alaska mining industry has a most promising outlook, that past mineral output is but a fraction of what will be produced in the future, but that immediate prospect for a large expansion of Alaska mining is not so hopeful. Aside from the improvement in general and worldwide economic conditions, what the Alaska mining industry most needs

is a lowering of costs of transportation and the expansion of land and water routes.

Copy seen: DLC.

33745. BROOKS, ALFRED HULSE, 1871-1924. The future of gold placer mining in Alaska. (*In:* U. S. Geological Survey. Mining resources of Alaska in 1914. Bulletin, 1915. no. 622, p. 69-79)

Surveys past gold mining industry of Alaska and shows that for several years gold production has been on the decline. Discusses the distribution and extent of the gold-bearing gravels and their gold content, and concludes that "given cheaper fuel and transportation there is no reason to believe that placer mining will continue to decline."

Copy seen: DLC.

33746. BROOKS, ALFRED HULSE, 1871-1924. Gold deposits near Valdez. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 108-130, fold. map)

Describes the geography and geology of the Port Valdez district; discusses the character and distribution of the gold quartz and lode deposits, and the character of the gold ores; gives description of the Cliff Mine and many of the gold lodes, and briefly considers the gold placers. Mentions the shipment of copper ore (chalcopyrite) from a copper deposit on Solomon Gulch.

Copy seen: DLC.

33747. BROOKS, ALFRED HULSE, 1871-1924. The mineral deposits of Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914. no. 592, p. 18-44, fold. map) 25 refs.

As a summary of work over 16 years, author describes the map of Alaska mineral resources and the various mining districts, and then discusses the geologic occurrence in Alaska of gold; copper; silver, lead and zinc; tin and tungsten; iron and chromite; antimony; various other metallic minerals; and coal, petroleum, peat, structural materials; miscellaneous nonmetallic minerals, and the water resources.

1920, Bull. no. 722, 1922, p. 7-74;
1921, Bull. no. 739, 1923, p. 1-44;
1922, Bull. no. 755, 1924, p. 3-49;
1923, Bull. no. 773, 1925, p. 3-52)

Prepared by A. F. Brooks as chief Alaskan geologist, except 1917 by G. C. Martin, 1919 by Brooks and Martin, and 1922 by Brooks and S. R. Capps. Each year's report comprises discussions of the distribution of the mineral deposits of Alaska, and developments in the various mineral industries during the year. Notable features of specific years' reports are as follows: that of 1905 (Bull. 284) has a map showing possible railway routes and known occurrences of economically important minerals; that of 1908 (Bull. 379) a relief map of central Alaska, an extensive consideration of conditions, costs and methods of placer mining, also of the mineral land laws. The report for 1912 (Bull. 542) stresses the inadequacy of transportation, discusses railway routes with a map showing each from the Pacific seaboard to the Yukon and the Kuskokwim; that for 1913 (Bull. 592) has a contour topographic map (1:62,500) of Portage Pass between Passage Canal and Turnagain Arm in Kenai Peninsula. In 1914 (Bull. 622) summary report of U. S. Navy tests on Matanuska coal is given, passage of the coal-leasing law is noted, and text of the Act (HR14233) given here and that of the lease in the following year (Bull. 642). Value of mineral production of Alaska 1880-1916, is graphically presented in the report for the latter year (Bull. 662), which includes also discussion of petroleum in Alaska with maps of the Katalla, Iniskin and Cold (now Puale) Bay fields. The report for 1922 (Bull. 773) which includes an extended discussion of gold placers, is entitled *Alaska's mineral resources and production*. It was the last by Dr. Brooks.

Describes a small petroleum seepage from Quaternary gravels about one mile southwest of Anchorage, examined by the author in 1921. **Copy seen:** DLC.

33750. BROOKS, ALFRED HULSE, 1871-1924. Preliminary report on the Tolovana district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 201-209, fold. map)

Contains a description of the gold placer district in the headwater region of the Tolovana River (approx. 65°30' N. 148°30' W.) in central Alaska, based upon reports of operators and prospectors. The mining history, topography, geology, the gold placers, and commercial conditions of the district are described.

33751. BROOKS, ALFRED HULSE, 1871-1924. Railway routes in Alaska. (National geographic magazine, Mar. 1907. v. 18, p. 165-90, maps, illus., figs.)

Discusses controlling factors of railway location, cost per mile of railway construction in Alaska, resources to be developed, geographic control of possible routes, and available harbors. Various possible routes are described and their feasibility compared. Concludes that there is justification for a trunk-railway from the Pacific seaboard to inland points, but that more facts are needed before scientific deductions can be drawn of the best route for immediate construction.

33752. BROOKS, ALLAN, 1869- . Notes on the birds of Porcher Island, B. C. (Auk, Apr. 1923. v. 40, no. 2, p. 217-24)

Includes notes on the Alaskan ptarmigan (*Lagopus lagopus alexandrae*) and red-tailed hawk (*Buteo borealis*?), p. 221, which are probably migrants from the Alaskan coast or from Prince of Wales Island.

Copy seen: DSI; MH-Z.

33753. BROOKS, ALLAN, 1869- . Notes on the status of the Peale falcon. (Condor, Mar. 1926. v. 28, no. 2, p. 77-79, illus.)

Contains a discussion of characters and the range of the heavily marked peregrine

of the North Pacific, called *Falco peregrinus pealei*, which breeds on the Queen Charlotte Islands and on the southern islands of the Alaskan coast. The range is the North Pacific islands between 50° and 55° N. lat. from the Skeena River mouth, B. C. to the Commander Islands (and adjacent coast of Kamchatka?). A table of measurements of the Peale falcon is appended. **Copy seen:** DSI; MH-Z.

33754. BROOKS, BARNEY 1884- , and G. W. DUNCAN. The effects of temperature on the survival of anemic tissue. (Annals of surgery, July 1940. v. 112, p. 130-37, illus., tables) 9 refs.

Contains an account of experiments on viability of rats' tails deprived of circulation and exposed to environmental temperatures of -5° to +40° C. The effectiveness of temperature became proportionately greater towards the highest and lowest extremes of the range.

Copy seen: DSG.

BROOKS, CHANDLER McCUSKEY, 1905- , see Koizumi, K., and others. Effect of temperature . . . reflex activity. 1954. No. 35644.

33755. BROOKS, CHARLES ERNEST PELHAM. The climatic changes of the past thousand years (Experientia, Apr. 15, 1954. v. 10, no. 4, p. 153-58, illus. table, maps) 13 refs. Text in English. Summary in French.

Contains a reconstruction of climate in the Northern Hemisphere, based for the pre-instrument period on records of freezing of coastal waters, sea ice, etc., advances and retreat of glaciers, width of tree rings, etc. Glacier changes in Scandinavia, Iceland and Alaska are discussed, but especially the extent of floating ice in the Arctic and its role and place in these long-term climatic changes.

33756. BROOKS, CHARLES ERNEST PELHAM. The rôle of the oceans in the weather of western Europe. (Royal Meteorological Society. Quarterly journal. Apr. 1930. v. 56, no. 234, p. 131-40, 2 graphs) 2 refs.

Contains discussion of (1) Gulf Stream, Labrador, and East Greenland currents, (2) ice in the Kara, Barents, and Greenland Seas, and the effect of variations in these two elements upon weather in the Greenland Sea and western European regions. Weakening or strengthening of the warm or cold ocean currents influ-

ences ocean surface temperatures, which in turn affect atmospheric pressure and general circulation in the area of the Icelandic Low. Large amounts of ice in the Kara, Barents, and Greenland Seas were found to cause abnormally high atmospheric pressure near Iceland in late summer and abnormally low pressure the following winter. These effects tend to recur annually at northern stations for about four years following the abnormal ice years. **Copy seen:** DLC.

33757. BROOKS, JAMES WELTON, 1915- . A contribution to the life history and ecology of the Pacific walrus. College, Alaska, May 1954. 103 p. illus. tables, map on plates. Process print, (Alaska. Cooperative Wildlife Research Unit. Special report no. 1) 35 refs.

Thesis, comprising an extensive study based on field work in the Bering Strait and Point Barrow regions 1952-53, and aerial survey of the Walrus Islands group in Bristol Bay. Deals with classification and taxonomy, including Eskimo names; distribution; migrations and their possible causes; morphology and anatomy; senses; growth and age determinations; breeding biology (reproductive organs; sexual maturation; breeding frequency: females biennially, males annually; mating, gestation and post-natal care); food (mainly bivalve molluscs); diseases and other inimical factors; enemies; walrus harvest (hunting methods, size of harvest, its value); present population status; management and conservation; management proposals. The Pacific walrus, *Odobenus divergens* (Illiger) inhabits the Bering Sea north of the Pribilofs in winter and the Chukchi Sea in summer. Its great bulk (up to 2795 pounds) and acute senses are stressed. Its tusks are the basis of the Alaskan Eskimos' ivory-carving industry (which grosses up to \$200,000 annually) and new markets are required for its other products.

A preliminary progress report of this study (1952) was listed as *Arctic Bibliography*, No. 20930.

Copy seen: CaMAI; DI.

Contains account of an investigation by the author in association with the

Alaska Cooperative Wildlife Unit initiated in Spring 1952, with field investigations May-Aug. 1953 in the Bering Strait and Wainwright-Point Barrow regions. The biology, population level and trend of *Odobenus divergens* Illiger and its importance to West Alaskan Eskimos were studied. Range, size and weight, senses, herding, etc., are described. Take (data of 1948-1952 given for 13 native villages), utilization of meat and ivory (with statistics on ivory carving industry) are presented. Breeding, population trend, effect of hunting, disease, etc.; management measures existing and proposed are discussed.

Copy seen: DLC

33759. BROOKS, WINTHROP SPRAGUE. An undescribed song sparrow from Alaska. (New England Zoological Club. Proceedings, Nov. 4, 1919. v. 7, p. 27)

Contains description and measurements of *Melospiza cinerea semidiensis* n. ssp. Semidi Islands song sparrow (type, adult male, North Semidi Island, Alaska, Apr. 19, 1913, collected by W. S. Brooks).

Copy seen: DSI; MH-2

33760. BROUILLETTE, BENOÎT, 1904- . Les Esquimaux, éleveurs de moutons? (Revue canadienne de géographie, July-Oct. 1954. v. 8, no. 3/4, p. 100-101) **Title tr.:** The Eskimos as sheep raisers!

Contains note on investigations by M. C. Findlay during four months in summer 1954 around Fort Chimo in northern Quebec. Eskimos of the region practice no form of agriculture, are content with day-to-day living, and are forgetting their ancestral ways of life: hunting, etc. Sheep-raising as practiced by the Greenlanders might be introduced here, the best place for such an experiment being along the estuary of the Lait River, about 50 miles from Fort Chimo.

33764. BROWMAN, LUDVIG GUSTAV, 1904- Artificial sixteen-hour day activity rhythms in the white rat. (American journal of physiology, 1952. v. 168, p. 694-97)

"Female rats, taken from a colony raised in continuous light for 25 generations, were found to exhibit a 24-hr. activity rhythm. Placing the animals in an artificial 16-hr. day (8 hrs. light and 8 hrs. dark) produced, within five days, a disruption of the original cycle and replaced it with a 16-hr rhythm (12 of 16 rats) which persisted for the duration of the 45-day observation period."—*Psychological abstracts*, Mar. 1953. v. 27, no. 3, p. 169.

Copy seen: DLC.

33765. BROWMAN, LUDVIG GUSTAV, 1904- The effect of bilateral optic enucleation on the voluntary muscular activity of the albino rat. (Journal of experimental zoology, 1942. v. 91, p. 331-44, illus., tables) 17 refs.

Constant light was found to inhibit activity in normal rats; constant darkness obliterated the difference in activity between blinded and normal animals, and the difference which normally exists between the sexes. Also, blinded rats

were less active in warmer than in cooler environments.

Copy seen: DSG.

33766. BROWMAN, LUDVIG GUSTAV, 1904- The effect of controlled temperatures upon the spontaneous activity rhythms of the albino rat. (Journal of experimental zoology, 1943. v. 94, p. 477-89)

Contains a study of spontaneous activity of 32 females during the first six months of life under conditions of controlled temperature and light. "It is concluded that the normal nocturnal spontaneous activity rhythm and oestrus cycle of the albino rat are dependent upon the concomitant daily variation of both light and temperature."—*Psychological abstracts*, 1945. v. 19, p. 158.

Copy seen: DLC.

33767. BROWMAN, LUDVIG GUSTAV, 1904- Light in its relation to activity and estrous rhythms in the albino rat. (Journal of experimental zoology, 1937. v. 75, p. 375-88, illus.) 16 refs.

The daily activity rhythm of rats exposed to continuous light is a periodic fluctuation between nocturnal and diurnal activity; continuous light led to continuous vaginal cornification for longer than five days; three generations raised under continuous light showed no typical change in size of litter, time of opening eyes, etc. Reversal of night-day light caused reversal of rhythm, but rats in total darkness tend to keep the activity rhythm with which they entered the period of darkness. Blindness caused nocturnal activity rhythms irrespective of light conditions.

33778. BROWN, JOHN STAFFORD, 1894-. The Nixon Fork country. (In: U.S. Geological Survey. Mineral resources of Alaska in 1924. Bulletin, 1926, no. 783, p. 97-144, 3 fig. incl. map, 2 fold. maps)

Presents the results of a field investigation by the author in 1924, of the Nixon Fork basin in the Kuskokwim drainage basin and of the upper Nowitna basin, tributary to the Yukon River in west-central Alaska. Describes the geography, areal geology, and economic geology of the region—placer and lode gold deposits. Discusses also the possible occurrence of coal and petroleum. *Copy seen:* DLC.

33779. BROWN, JOHN STAFFORD, 1894-. Silver-lead prospects near Ruby. (In: U.S. Geological Survey. Mineral resources of Alaska in 1924. Bulletin, 1926, no. 783, p. 145-50, map)

Presents the results of a field investigation, in 1924, by the author, of silver-lead prospects on Beaver Creek, about 14 miles south of Ruby on the Yukon River in west-central Alaska. The ore deposit consists of lenticular veins of silver-bearing galena intercalated in schists. Describes the geology of the ore deposit, the development work done and the results. Suggestions are given as to prospecting and the future possibilities of the prospects are discussed. *Copy seen:* DLC.

33780. BROWN, MALCOLM, 1916-, and others. Blood volume and basal metabolic rate of Eskimos. (Metabolism: clinical and experimental, May 1954. v. 3, no. 3, p. 246-54, fig., 2 tables) 32 refs. Other authors: G. S. Bird, L. M. Boag, D. J. Delahaye, J. E. Green, J. D. Hatcher, and J. Page.

Contains report of a study made between July 11 and Aug. 29, 1949 on healthy Eskimos of Southampton Island, Canada, by members of Queen's University Arctic Expedition. The blood volume and basal metabolic rate were found to be elevated, and both fell during the summer months. *Copy seen:* DSG.

33781. BROWN, MALCOLM, 1916-, and others. Cold acclimatization. (Canadian Medical Association. Journal, Mar. 1954. v. 70, no. 3, p. 258-61, 2 fig., table) 16 refs. Other authors: G. S. Bird, D. J. Delahaye, J. E. Green, J. D. Hatcher, and J. Page.

Contains a report of investigations on male Eskimos of Southampton Island (in June-July, 1949-1950), with Queen's University male students serving as controls. It is concluded that vascular response to acute cold exposure is different in the acclimatized than in the not-acclimatized; that the acclimatized also show changes between cold exposures and these are in part at least due to increased amount of circulating thyroid hormone. *Copy seen:* DSG.

33782. BROWN, MALCOLM, 1916-, and others. The occurrence of cancer in an Eskimo. (Cancer, Jan. 1952. v. 5, no. 1, p. 142-43, illus.) ref. Other authors: L. B. Cronk and T. J. Boag.

Contains what is apparently the first report of cancer in an Eskimo, about 70 years old. Case history and autopsy findings are presented. The case was noticed by the Queen's University Arctic Expedition in Aug. 1949, at Coral Harbour, Southampton Island.

Copy seen: DSG.

33783. BROWN, MALCOLM, 1916-. Progress report on clinical and biochemical studies of the Eskimo. Ottawa, Oct. 1951. 20 p. 21 tables. Mimeographed. (Canada. Defence Research Board. Report, no. DR 41)

Work of the Queen's University Arctic Expeditions, 1947-1950 is outlined; its main purpose was study of the effect of cold on man, and a health and nutritional survey of two selected groups of Eskimos. Five trips were made to Southampton Island, one including Igloodik. Brief discussion and data are given on: characteristics of the Southampton Island group as a whole; morbidity in the Eskimos; tuberculosis; degenerative diseases; carcinoma; nutritional status (including studies of food intake); fat

metabolism; protein metabolism; haematology; basal metabolic rate; peripheral blood flow; hepatomegaly; animal feeding experiments with walrus and seal meat.

33784. BROWN BECKEL, D. K., and B. R. IRVINE. Botanical studies at Duke of York Bay, Southampton Island, Northwest Territories, Canada. [Ottawa], Nov. 1954. 37 p. 8 illus. on 4 plates, text map. Mimeographed. (Canada. Defence Research Board. Defence Research Northern Laboratory. DRNL technical paper, no. 25) 6 refs. Submitted by the authors at Fort Churchill, Manitoba, Sept. 1954.

Field investigations were carried on in the eastern Duke of York Bay region, northern Southampton Island (65°25' N. 84°50' W.), Aug. 11-29, 1952. Typical vegetation of the limestone beaches bordering the bay and of the granitic ridges inland to the east is described, with lists of primary and secondary species. Comparisons are made with collections from Bear's Cove Point in the southern part of the Island. An annotated list is given of mosses and vascular plants of the region. Collections brought the known vascular flora of the island to 187 species and 28 subsidiary entities.

BROWNE, IRENE, *see* Cray, A. P., and I. Browne. Probable ice island locations . . . January 1954. 1954. No. 34261.

33787. BROWNE, RALPH. Alaska's largest city, Anchorage: an analysis of its growth and future possibilities, 1951-1952. Juneau, Alaska Development Board, Dec. 1953. 90 p. text map, tables.

Contains a survey for private investors investment institutions, government lending agencies and others, of the resources, economic conditions, problems, and development opportunities in the Greater Anchorage region. Location, government and population, business activity, finances, labor, cost of living, etc., are summarized. Housing, schools, public utilities, land use and zoning, health, etc., are outlined. Transport and communications, federal government and military activities, (with statistics on personnel), and problems of economic stability are dealt with. Mineral development, building materials, production are considered, as well as forest resources, agriculture, fisheries, and hydro-electric power. Trade possibilities, tourist industry, various manufacturing and service enterprises which might be established, are discussed.

Copy seen: DLC.

33788. BROWNE, RALPH. Klukwan: new "Mesabi" on the Pacific Front. A preliminary report on possibilities for establishing an iron, ferroalloy and electrothermal steel industry in the Klukwan-Haines region of Alaska. Juneau, Alaska Development Board, May 1953. 91 p. illus., 2 text maps, graphs. Mimeographed.

Contains a survey discussion of the large titaniferous magnetite deposit located near the settlement of Klukwan, Southeast Alaska (59°24' N. 135°54' W.), about 23 miles northwest of Haines. Ore grades and reserves are as yet unknown. The economic possibilities of the ore deposit and its relation to U. S. and Alaskan iron requirements and to foreign sources of iron are described. Exploration and "development" of the deposit since 1908 and reports by the U. S. Bureau of Mines, U. S. Bureau of Reclamation, and U. S. Geological Survey are noted. Domestic utilization of the deposit depends on the actual production of ferro-alloys and electro-thermic steel at a site close to the deposit. Alaskan sources of additive, or alloying, minerals and of hydroelectric power necessary to these operations are discussed. **Copy seen:** DL.

33789. BROWNE, RALPH. Problems and opportunities facing Ketchikan, Alaska's "first city" and site of the territory's first pulp mill. [Juneau?] Alaska Development Board and City of Ketchikan, Sept. 1951. 27 p. Mimeographed.

Contains a survey made to determine the effect on Ketchikan of proposed construction of a high alpha sulphite mill by the Puget Sound Pulp and Paper Co., to be completed Aug. 1954. A prior study was made of Prince Rupert, B. C., 90 miles to the south, with similar economic problems, and comparisons are drawn throughout. The new year-round industry is expected to supplant seasonal fisheries as the basis of the local economy. Effects of the change are considered upon population; housing; public utilities; fire and police protection, sewage and garbage disposal; schools; social, health and recreational plans; transportation; business; and financing of civic improvements. **Copy seen:** DLC.

and intensive frost-action with suggestions on nomenclature. (American journal of science, Sept. 1946. v. 244, no. 9, p. 622-42, illus.) 47 refs.

"Nomenclature to facilitate the discussion of Arctic problems and the ancient frost-action of periglacial areas is proposed. Cryopedology is suggested as a suitable name for the sub-science concerned with the study, both theoretical and practical, of intensive frost-action and permanently frozen ground. Sixteen other terms are also introduced and defined. Of these, the important ones are pergelisol, permanently frozen ground, and mollisol, the overlying seasonally thawed ground in which intensive frost-action occurs. In areas where this action has ceased, the surface layer has been frost-disturbed or subject to congeliturbation. It is a congeliturbate—a term which includes all varieties of warp, trail, head, Coombe rock, solifluction deposit, Erdflisse, etc. The derivation of these proposed terms is discussed in detail and diagrams showing their application are included."—*Author's abstract.*

33804. BUCUR, A. I. Tratamentul congelatiilor cu ser clorurat hipertonic. (Romania medicală, Jan. 15, 1938.

v. 16, no. 1, p. 18-19) Text in Romanian.

Title tr.: Frostbite treatment with injections of hypertonic salt solutions.

Contains presentation of case of extensive frostbite (first to third degree) in a woman, aged 32, with data on anamnesis, clinical course, laboratory findings and therapy, the latter including intravenous administration of hypertonic salt solutions.

Copy seen: DSG.

33805. BUDDINGTON, ARTHUR FRANCIS, 1890- Mineral deposits of the Wrangell district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1921. Bulletin, 1923, no. 739, p. 51-75, 4 maps incl. 1 fold.)

Presents results of a geological reconnaissance by the author in the southern part of the Wrangell mining district in Southeast Alaska in 1921. He describes the general and economic geology of the region, discussing the relation of mineral deposits to rock formations. Detailed consideration is given to deposits of barite, copper, fluorite, garnet, gold, graphite, marble and limestone, pyrite, silver-gold, silver-lead, and zinc deposits.

Copy seen: DLC.

33806. BUDDINGTON, ARTHUR FRANCIS, 1890- Mineral investigations in southeastern Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 71-139, 7 sketch maps incl. 2 fold.)

Contains the results of investigations by the author in 1923, of the geology and mineral deposits of various parts of Southeast Alaska. Summarizes data on recent discoveries of gold, copper, nickel, silver, and lead ores. Describes the gold, silver, copper, lead, and zinc ores of the Hyder district; the gold deposits of the Sitka and Juneau districts, the copper, zinc, magnetite, and silver deposits of the Juneau district; the nickel deposits of Yakobi, Baranof, Chichagof, and Admiralty Islands, with a discussion of the economic aspects; and the barite and zinc deposits of the Petersburg district.

33808. BUDKER, PAUL, 1900- . Ba-leines et baleinoptères. (Naturalia, Mar. 1954. No. 6, p. 28-31, 2 col. illus.) Text in French. **Title tr.:** Whales and rorquals.

Contains popular description of the whales exploited by the whaling industry, primarily rorquals (*Balaenoptera*); true whales (*Balaena*) have been almost exterminated. Physical description of the whales is given, and their distribution, food migration and reproduction, and history of the whaling industry from 1868 are briefly reviewed. **Copy seen:** DLC.

33809. BuDOCKS TECHNICAL DI-GEST. Winterization kit. (BuDocks technical digest, Feb.-Mar. 1953. no. 32, p. 24, diagr.)

Description of a winterization kit developed by the Research Division of the U. S. Bureau of Docks that will enable internal combustion engines to start at temperatures as low as -65° F. The system is designed around a gasoline burning engine, coolant-type heater with lines to the coolant system and a specially designed insulated battery box. An ether-priming system is provided in addition to a glow plug. **Copy seen:** DLC.

33810. BUDYKO, M. I., and others. Teplovot balans poverkhnosti zemli. (Akademiâ nauk SSSR. Izvestiâ Ser. geograficheskâ, May-June, 1954. no. 3, p. 17-41, tables, diagrs., maps) 34 refs. Text in Russian. *Other authors:* T. G. Berlând and L. I. Zubenok. **Title tr.:** The heat balance of the earth's surface.

Contains summary of investigations, chiefly of Soviet meteorologists and geophysicists, on the annual amount of heat received or lost by the earth's surface due to solar radiation, reflection (albedo), evaporation, air circulation and sea currents; sketch-maps of the world show the (iso-)lines connecting the points of equal amount of each factor. The summary includes data for subarctic regions (60° N. and above). **Copy seen:** DLC.

33811. BÜDEL, JULIUS. Die wirtschaftliche Nutzung der Nordpolargebiete. (Universitas, Mar. 1951. Jahrg. 6, Heft 3, p. 323-332) Text in German. **Title tr.:** Economic utilization of the North Polar areas.

Contains an account of the animal resources of arctic seas and lands; the reindeer; animals, domesticated and in process of domestication; arctic mineral resources: nickel, copper, cobalt, gold, coal, etc.; transportation and communication; exploration; weather.

Copy seen: DLC.

Contains the most common Eskimo words and phrases, with Danish translation, arranged in chapters for the practical needs of a traveler. Rudiments of Eskimo grammar and a vocabulary are included. **Copy seen:** DLC.

33813. BUISSON, ARTHUR. Ungava Peninsula: history, resources and development; a survey of the great mineral and economic frontier represented in the Ungava Peninsula. (Canadian mining journal, Aug. 1952. v. 73, no. 8, p. 59-66, illus. incl. map) 15 refs. pub. simultaneously in *The Mining magazine*, London.

Describes northern Quebec and Labrador (formerly called the Ungava Peninsula, New Quebec): the boundary question, transportation facilities, explorations from the Norsemen to the present time, and modern developments. Mining resources include iron ore, copper, gold, asbestos, mica, pyrite, titanium, zinc, lead, cobalt, manganese, graphite, precious and ornamental stones (agate, jasper, labradorite), soapstones, limestone and granite suitable for building stone, magnesium limestones for hydraulic cement, and abrasive stones. Descriptions are given of the Knob Lake iron ore deposits and the Allard Lake ilmenite deposits and the developments based on them. **Copy seen:** DLC.

33814. BUJAS, ZORAN. Die Beziehung der Kälteempfindungen zur Grösse der Reizfläche. (Zagreb. Univerzitet. Psihol-ski institut. Acta, 1943. no. 14, 15 p.) Text in German. **Title tr.:** The rela-

tion of cold sensations to the size of stimulated surface.

Contains a study of the relative value of the thresholds, by employing a projection of chilled air upon a limited area of the forehead. "The mean results obtained in three subjects are to the effect that the liminal intensity decreases with increase in size of surface stimulated and that the intensity judged equal does so likewise. The influence of the surface is less on supraliminal surfaces."—*Psychological abstracts*, 1949. v. 23, p. 376.

33819. BURBIDGE, FREDERICK EDWARD, 1922- . The modification of continental polar air over Hudson Bay and eastern Canada. A thesis presented to the Faculty of Graduate Studies and Research, McGill University, in partial fulfillment of the requirements for the degree Master of Science. Montreal, Apr. 1949. 233 p. 9 illus., text map, charts, graphs, 18 tables. Typescript. 46 refs. Unpublished M. Sc. thesis, McGill University; published in condensed form (*Arctic Bibliography*, No. 21027).

"Continental polar air crossing Hudson Bay and continuing into eastern Canada is modified not only by the underlying surface but also by the dynamic effects occurring in the atmosphere during its trajectory over these regions. The amount of modification is of major

importance in the climate of the surrounding area, and in the meteorology of North American air masses." Objectives of the study were to compute changes that occur in physical properties in continental polar air over Hudson Bay; to evaluate the effect of the formation of ice on the modifying influence of the Bay, and that of the Bay on the climate of the surrounding area; to determine further changes that occur when the air continues into eastern Canada. Hudson Bay covered with pack ice in winter exerts no maritime influence on the surrounding region during approx. Jan.-Apr. Statistical data are appended on typical cases in the modification of continental polar air streams crossing the Bay in Nov. and Dec. and arriving at Port Harrison. **Copy seen:** CaMM.

33820. BURCHARD, ERNEST FRAN. CIS, 1875- . A barite deposit near Wrangell. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914. no. 592, p. 109-117, fig.)

Deposit found by the author on one of the Castle Islands in Duncan Canal, in Southeast Alaska in 1913 is described. Nearest port is Petersburg about 25 miles distant. Assays and an analysis of the barite are given and its possible value is discussed. Some general notes on the mineralogy and occurrence of barite, and its uses and preparation are included.

33821. BURCHARD, ERNEST FRAN. CIS, 1875- . Marble resources of Ketchikan and Wrangell districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913. no. 542, p. 52-77, fold. map)

Discusses the economic features of the marble deposits of these districts of Southeast Alaska. Describes the distribution of the marbles, their topographic situation, geologic relations, and types of marble available (p. 52-54). The deposits are then treated by specific localities (p. 55-73). All properties that had made shipments of marble from Alaska are described. Commercial considerations, including factors controlling value, sawing plants, available waterpower and electricity, transportation, competition, production, and uses are discussed (p. 73-77). A list is given of the buildings in western United States in which marble from Southeast Alaska is used in interior decoration. **Copy seen:** DLC.

33822. BURCHARD, ERNEST FRAN. CIS, 1875- . Marble resources of the Juneau, Skagway, and Sitka districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914. no. 592, p. 95-107, fold. map)

Presents the results of an investigation in 1913 of the marble deposits of parts of Southeast Alaska. Discusses the types and distribution of marble in the Juneau, Skagway, and Sitka districts; the topographic, commercial, and geological relations; and describes numerous marble deposits, both on the islands and on the mainland. Summarizes the factors controlling value and selects the deposits of possible economic importance.

33827. BURKHANOV, VASILII FEDOTOVICH. Na dreflufushchikh l'dakh. (Sovetskii sofiuz, Aug. 1954. no. 8 (54), p. 30-31, 11 illus.) Text in Russian. **Title tr.:** On the drifting ice.

Photographs of activities at North Pole Drifting Stations, with accompanying text by the chief of Glavsevmorputi (the Main Administration of the Northern Sea Route). The illus. by special *Tass* correspondent V. Sevast'ianov, show aircraft and motor transport, camp panorama and interior, bathymetric, actinometric and meteorological work in process, etc. Burkhanov recalls Arctic Basin drifts of Papanin 1937-38 (North Pole-1), and the *Sedov* 1937-40; remarks on operations of the two drifting stations (North Pole-3 and -4) set up in 1954; and mentions recent Soviet "discoveries" in the Basin: the Lomonosov Range, circular drift of ice fields and a singular magnetic anomaly. **Copy seen:** DLC.

33828. BURKHANOV, VASILII FEDOTOVICH. Nauchno-issledovatel'skie raboty v Severnom Ledovitom okeane. (Morskoi i rechnoi flot, Sept. 1954. god 14, no. 9, p. 1-4) Text in Russian. **Title tr.:** Scientific research work in the Arctic Basin.

A brief survey of Soviet arctic explorations, beginning with the Drifting Station "North Pole (-1)," 1937-1938, and continuing to the High Latitude Expedition of 1954; the oceanographic, glaciological, meteorological, geophysical and biological work carried out, discovery of the Lomonosov Range, observation of ice islands and of the circular drift of ice in the eastern part of the Arctic Basin, are noted. The article includes particulars

about the Drifting Station "North Pole-2": a party headed by M. M. Somov, in Mar. 1950 landed on an ice island north of Vrangeli Island at 76°02' N. 166°30' W., in one year's drift reached 81°45' N. 162°20' W., and in 1951 was taken off by airlift; after the party left, the island was continuously observed however, and it was seen at 82°10' N. 135° W. in Mar. 1952, and at 75°04' N. 170°20' W. in Apr. 1954.

33829. BURKHANOV, VASILII FEDOTOVICH. Proiskhozhdenie ledian'nykh ostrovov v Arktike. (Voprosy geografii, 1954, v. 36, p. 3-29, illus. maps, plans) Text in Russian. Abstract (in Russian) in *Referativnyi zhurnal; geologii i geografii*, Nov. 1954, no. 5, p. 187-89. **Title tr.:** The origin of ice islands in the Arctic.

A paper delivered by the chief of the Main Administration of the Northern Sea Route to the Moscow Branch of the Geographical Society on Feb. 18, 1954. Many islands and lands which have been observed in the Arctic Basin and later disappeared, are briefly reviewed: (Gillis, Andreeva, Sannikova, Bradley, Takpuk); such was the land seen by the crew of schooner *Krest'ianka* northeast of Gerald Island in 1934 (Zemlya Krest'yanka); in 1937, L. Mukhanov, head of the polar station on Genryetta Island, saw and described "Zemlya Polyarnikov" (or Zemlya Mukhanova), an island later identified by Soviet flyers as a large iceberg. The occurrence of large icebergs in the region where a land had been seen by Giles, was established by S. O. Makarov as long ago as 1899. In 1947, the icebreaker *Mikoiān* approached and investigated, and the hydrologist P. A. Gordienko described a great iceberg moving north of Vrangeli Island, and the next year another in the central part of the East Siberian Sea. In March 1946, a drifting ice island was discovered by the flyer I. S. Kotov at 76° N. 165° W., named "Krest'yanka," and observed by Soviet flyers the next year; in April 1948, another was found by I. P. Mazuruk at 82° N. 170° E., and observed at 87° N. 155° E. in 1950; in March 1950, the flyer V. M. Perov also found an ice island at 74°30' N. 169° W. These three islands, author states, were later discovered by the American flyers and named "T-1", "T-2", and "T-3" respectively. The origin of the ice islands

in the region of Franz Joseph Land, Severnaya Zemlya, North Greenland and Canadian Arctic Archipelago is asserted and illustrated by observation of their glaciers and shelf ice and of large ice masses breaking away as islands. The drift of ice islands in various parts of the Arctic Basin is discussed, and the need of further investigation stressed. *Maps* show: distribution of hypothetical lands, p. 4; routes of expeditions searching for Sannikova Land, p. 8; drift of ice islands allegedly discovered by Kotov, Mazuruk and Perov, p. 14; plan of "Kotova" Island (or "Krest'yanka", "T-1"), p. 15; general scheme of drift of ice islands, p. 17; plan of formation of ice island on the coast of Oktyabr'skoy Revolyutsii Island, p. 20; probable drift of Sannikova Land, p. 27. **Copy seen:** DLC.

33830. BURMISTER, CLARENCE AMANDUS, 1896- . Electronic position indicator. (International hydrographic review, May 1954. v. 31, no. 1, p. 113-32, 6 diagr., plates)

Detailed description of the Electronic Position Indicator (EPI) used for hydrographic surveys. The system is complementary to Shoran which does not give the control required for surveys in such critical areas as the Atlantic Seaboard, Gulf of Mexico, in the Bering Sea, and other places where the continental shelf extends as far as a hundred miles offshore. EPI is a pulse-type arcuate system which requires ship equipment capable of transmitting pulses of electromagnetic energy and of measuring very small increments of time, and two ground stations for transmitting similar pulses accurately synchronized with those from the ships. The ship and ground station equipment are described at length and simplified block diagrams of the system are included. **Copy seen:** DLC.

Brinell and scratch hardness tests were made on single ice crystals obtained from Mendenhall Glacier, near Juneau, Alaska. The experimental procedure is described. Results showed that: (1) hardness of the crystals increases with decreasing temperature; (2) an anisotropism of hardness is evident with respect to the orientation of the c-axis; (3) "a linear empirical relationship exists between the Brinell hardness numbers and the microhardness numbers normal to the c-axis, but the relationship between the Brinell and microhardness numbers parallel to the c-axis is not linear"; (4) "some difference in the structure of the surface with respect to orientation of the single ice crystal consistently causes a wavy scratch normal to the c-axis but a straight scratch parallel to it." **Copy seen:** CaMAI.

33835. BUTLER, JOHN RUSSELL. Geochemical affinities of some coals from Svalbard. Oslo, Brøgger, 1953. 26 p. text map, 4 graphs, 10 tables. (Norsk Polarinstitutt. Skrifter, nr. 96) 28 refs. Samples of Tertiary coals, taken from three localities in the Sveagrava region (77°50' N. 16°30' E.) of Vestspitsbergen in 1949, were studied to find "what seam-variation occurs and whether element distribution for ash or coal in a particular seam is sufficiently distinctive to enable it to be correlated in different localities and distinguished from another seam." The experimental procedure is outlined. Coal and ash components and minor elements in the ashes of samples from each locality (two in the Svea seam, one in the Upper seam) are

described in detail in text and tables. Microscopic differences in the coal and differences in major and minor element concentrations in the ashes were found between samples from the Svea seam and those from the Upper seam.

33836. BUTTLE, GLADWIN ALBERT HURST, and others. The effect of cortisone acetate in protecting adrenalectomized and normal mice against cold stress. (Journal of physiology, Jan. 1954. v. 123, no. 1, p. 5P-6P) 5 refs. **Other authors:** P. F. D'Arcy and E. M. Howard.

Contains a summary of experiments with young adrenalectomized animals and normal weanling mice both injected with cortisone acetate, exposed to cold and survival time registered. The experiments indicate that young adrenalectomized mice may be used in cold protection tests for the bioassay of adrenal cortical steroids. The method is rapid and cheap.

33838. BYHAN, ARTHUR, 1872-, and E. KROHN. Das Kunstgewerbe der Völker Nord-, Mittel- und Vorderasiens. (In: H. Th. Bossert, ed. Geschichte des Kunstgewerbes aller Zeit und Völker. Berlin, 1929. Bd. 2, p. 1-50, illus., plates 1-5) 12 refs. Text in German. **Title tr.:** Applied art of peoples in northern, central and near-eastern Asia.

Includes a review of clothing and household utensils of north Siberian peoples, the Ostyaks, Voguls, Tungus, Yakuts, Gilyaks, and others. The technique of preparing material for clothing from fur, hide, fish skin, tree bark, nettles, etc., is described. The inclination of people to embellish their garments and implements by ornamentation despite harsh climate and hard living conditions is emphasized. *Copy seen:* DLC.

33839. BYKHOVSKAĬA-PAVLOVSKAĬA I. E. Fauna sosal'shechikov ptifŭ Zapadnoĭ Sibiri i ee dinamika. (Parazitologicheskii sbornik, 1953. t. 15, p. 5-116, 67 fig., 14 tables) 305 refs. Text in Russian. *Title tr.:* The trematode fauna of the western Siberian birds and its dynamics.

Contains an extensive study of these flukes—112 species—found in more than two thousand birds examined, and belonging to 90 species, a considerable proportion of them arctic. Following an introductory part on the physiography of the area, on earlier work, and data of species and numbers of birds examined and infected, there is a detailed, morphological anatomical treatment of the flukes (p. 11-82). This is succeeded by a general part dealing with the dependence of the parasitic fauna on the age of the birds, on their food, on the season and migration, etc. Numerous statistical tables elucidate the host-parasite relations. *Copy seen:* DSI-M.

33841. BYRD, RICHARD EVELYN, 1888- Flying over the polar sea. (United States Naval Institute. Proceedings, Aug. 1925. v. 51, no. 8 (whole no. 270), p. 1320-38, 8 illus., 5 maps (1 double, 1 fold.)

Account of proposed flights over the Arctic Basin written just prior to the departure of the U. S. Naval Arctic Aviation Unit from Sydney, Nova Scotia, for Etah to cooperate with the MacMillan expedition (cf. latter's narrative, *Arctic Bibliography*, No. 10677). Description is given of the three Loening amphibian airplanes, proposed landing sites, radio communication, navigation, astronomical observations. Food, including pemmican, is discussed and ration tables given. Navigation equipment used included the Buntstead sun compass and Pioneer earth induction compass. Polar chart no. 2560, published by the U. S. Hydrographic Office, was used and is reproduced here. Moon sights were taken to locate the Sumner line, with the aid of the *Nautical Almanac* and the polar chart. Bubble sextant, speed and drift indicator, course and distance indicator, and improved smoke bombs were carried. *Copy seen:* DLC.

33846. CAHALANE, VICTOR HARRISON, 1901- A biological survey of Katmai National Monument. (In: Luntley, R. S., and others. Interim report on Katmai Project . . . Alaska, Mar. 1954. p. 75-109)

Purpose of the author's research during the 1953 field season of the Project was to obtain: (1) information on the animal species present in the Monument; (2) data to assist in construction of an ecological map of the Monument and adjacent area to the north; and (3) collection of herbarium specimens for preparation of annotated list of plants. Briefly annotated lists are given of 29 species of mammals, 86 birds (representing 77 genera), and about nine fish; also 154 plants (in 102 genera) with information on toxicity and usefulness as food. Preparations for the ecological map are described, and conclusions and recommendations for another field season are listed.

Contains a summary, mainly of author's work on production of hypothermia with the aid of chemical preparations.

Copy seen: DSG.

33848. CAILLEUX, ANDRÉ, 1907-, and G. TAYLOR. Cryopédologie, étude des sols gelés. Paris, Hermann, 1954. 218 p. 12 plates, illus., sketch maps, diagrs., graphs, tables. (Expéditions polaires françaises, IV; pub. as Actualités scientifiques et industrielles 1203) 1529 refs. Text in French. Brief summary in English. **Title tr.:** Cryopedology, a study of frozen soils.

Soils formed in cold climates are almost entirely the result of mechanical and physical processes. In the first part of this revision and expansion of the authors' *Études de cryopédologie*, 1948 (*Arctic Bibliography* No. 2613), soil temperatures and general effects of frost action in the soil are considered. Pt. 2 discusses the various phenomena found within soils of periglacial regions, such as ice wedges, polygonal and striped soils, plications, involutions and injections, frost mounds, and palsas. Pt. 3 deals with superficial formations including stone pavements, boulder fields, mud flows, rock glaciers, etc. Applications of the study of permafrost and the active layer to engineering projects and (very briefly) to agriculture, mining, and military operations are considered in pt. 4. Illustrations include areas in Greenland, Canada, Alaska, Svalbard, northern Norway and Sweden, and Arkhangel'skaya Oblast'.

33849. CAILLEUX, ANDRÉ, 1907- Polissage et surcreusement glaciaires dans l'hypothèse de Boyé. (Revue de géomorphologie dynamique, 1952. année 3, p. 247-57, diagrs.) 10 refs. Text in French. Summary in English. **Title tr.:** Glacial polishing and gouging in Boyé's hypothesis.

"Boyé's theory that the destruction of bedrock under glaciers is caused by frost action is evaluated and verified on the basis of observations in Greenland in 1948. The process of frost penetration and frost-action mechanics are discussed and found to agree well with Boyé's hypothesis. The fissuring of the bedrock is not caused by the glacier itself, but by frost action during the cold climatic phase preceding the arrival of the glacier."—SIPRE.

33850. CAILLEUX, ANDRÉ, 1907- Premiers enseignements glaciologiques des Expéditions polaires françaises 1948-1951. (Revue de géomorphologie dynamique, 1952. année 3, p. 1-19, text

map, diagrs., graph, tables) 35 refs. Text in French. Summary in English. **Title tr.:** First glaciological results of the French Polar Expeditions 1948-1951.

"Results of investigations chiefly in Greenland but also on the Vatnajökull (Iceland) and Adélie Coast (Antarctica) are discussed, and glaciated landscapes as well as the lithology of glacial deposits are briefly described. The central depression of the cradle-shaped Greenland land mass is covered with an icecap in thermal equilibrium averaging 1900-2300 m. in thickness. Research seems to indicate that icecaps result from the spread of glaciers because of climatic changes from mountains to piedmont table land, followed by a mechanical accumulation in the lower areas until the firn line is reached and the metamorphism of snow precipitation becomes generalized in extent. The total volume of the world's glaciers is approximately 26-36 million cu. km., and a 43- to 60-m. rise in sea level would result from the melting of this ice. Meteorological studies on a surface anticyclone effect over inland ice (which in Greenland is limited to an air layer 30-300 m. above the ice) confirm this theory."—SIPRE.

Copy seen: DLC.

33851. CAILLEUX, ANDRÉ, 1907-, and **J. TRICART.** Un type de solifluction: les coulées boueuses. (Revue de géomorphologie dynamique, 1950. Année 1, p. 4-46, illus., text map, diagrs., graph, tables) 14 refs. Text in French. Summary in English. **Title tr.:** A form of solifluction: mud slides.

"The general characteristics of mud slides in different climatic zones, topographic and soil conditions conducive to slide formation and the mechanical processes involved are discussed in detail and tabulated. Freezing and thawing resulting in a concentration of water and ice in the soil, the destruction of the colloidal equilibrium in the ground by water migration, scanty vegetation and the permafrost layer which constitutes an ideal sliding surface are conditions most favorable to slide formation in periglacial zones. Preventive methods are discussed and the paving or turfing of dangerous zones is recommended."—SIPRE.

33853. CALLAGHAN, JOHN CARTER, 1923-, and others. Cerebral effects of experimental hypothermia. (Archives of surgery, Feb. 1954. v. 68, no. 2, p. 208-215, illus.) 21 refs. Other authors: Donald A. McQueen, John W. Scott, and W. G. Bigelow.

A study of monkeys cooled to 20°C. and then rewarmed. EEG observations disclosed a depression of cortical activity during cooling and its near, or complete stoppage at 20° C.; on rewarming the rhythms returned in reverse order. There was no evidence of brain injury and the animals performed tests learned before cooling. Unconsciousness and loss of motor power and reflexes occurred as body temperature fell, but returned upon rewarming. **Copy seen:** DSG.

33854. CALLAWAY, ELLIOTT B. An analysis of environmental factors affecting ice growth. Washington, D. C., Sept. 1954. 30 p. graphs. (U. S. Hydrographic Office, Technical report 7) 11 refs.

"The effects of various oceanographic and meteorological variables on the growth rate of sea ice are evaluated. Both graphical and computational methods for predicting ice thickness are described with particular reference to the work of Kolesnikov and Devik. Predicted and observed values of ice thickness are compared for several arctic locations and show good agreement. The most important facts affecting ice growth are air temperature, snow thickness and snow density."—SIPRE.

33865. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. Annual report for the fiscal year ending Mar. 31, 1950 [-Mar. 31, 1954] Ottawa, Queen's Printer, 1950-1954, in progress.

This Department, created Dec. 10, 1949 (in force Jan. 20, 1950) in a departmental reorganization, carries on the services to the mining industry rendered by the former Dept. of Mines and Resources. It has five branches: Geological Survey of Canada (established 1842), Mines Branch, Surveys and Mapping Branch, Geographical Branch, Dominion Observatories.

Its annual report continues those of the Dept. of Mines 1921-1936 and the

Dept. of Mines and Resources 1937-1949. Each year's report now includes summaries of field and laboratory work in arctic and subarctic Canada. Subjects covered include: geodetic, geologic, geographic, hydrographic, mineral resources, topographic, magnetic, gravity, and legal surveys; map compilations; work of International Boundary Commission and of Board on Geographical Names; stratigraphic paleontology; radioactive resources; pleistocene and engineering geology; mineral dressing and processing; seismic studies; studies of ice conditions. **File seen:** DGS.

33866. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. GEOGRAPHICAL BRANCH. Bibliography of periodical literature on Canadian geography for the period 1940-1950. Ottawa, Aug. 1952. 128 p. Mimeographed. (*Its:* Bibliographical series no. 9) Second edition (131 p.) pub. 1954.

The bibliography is arranged by regions with subject breakdowns (bibliography, biogeography, physical geography, surveying and mapping, exploration and travel, etc.), and authors listed alphabetically under the subjects. Arctic material may be found under Canada, Newfoundland-Labrador, Quebec, Ontario, James Bay region, Western Canada, Manitoba, Northwest Territories and Yukon, and Arctic and Hudson Bay. A list of the periodicals indexed is included. **Copy seen:** CaMAI.

33867. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. GEOGRAPHICAL BRANCH. Canadian urban geography. Ottawa, 1954. 80 p. Mimeographed. (*Its:* Bibliographical series, no. 13)

Contains bibliography of about 800 items, including books, government publications, periodical articles, and university theses. References are arranged under provinces and territories, by name of the community. Much arctic and subarctic material is included. **Copy seen:** CaOGB.

33868. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. GEOGRAPHICAL BRANCH. List of Library accessions. Ottawa, 1949- *in progress*. Mimeographed.

Monthly list of books and papers received in the Library, the contents of the current journals specified. As the Geographical Branch Library was established

in 1948 with strong interest in the North, this record of its developing collection is a useful source of arctic, particularly Canadian Arctic, materials.

File seen: CaMAI.

33869. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. GEOGRAPHICAL BRANCH. Selected bibliography of Canadian geography with imprint 1949-1952. Cumulative editions. Ottawa, 1950-1953. 4 nos.: 19 p., 25 p., 52 p., 52 p. Mimeographed. (*Its:* Bibliographical series no. 5, 7, 8 pt. 3, 10)

Published in parts during each year, with a cumulative annual edition published the following year. Bibliographies for 1949 and 1950 contain two sections, a subject and a regional classification, with authors arranged alphabetically under subject and region. Bibliographies for 1951-1952, are classified by region with subject breakdown, and authors listed alphabetically under subject. Arctic material is included under Eastern Canada, Western Canada, Newfoundland-Labrador, Ontario, Quebec, Manitoba, Northwest Territories and Yukon, Arctic and Hudson Bay. **Copy seen:** CaMAI.

33870. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS. GEOGRAPHICAL BRANCH. University dissertations, theses and essays on Canadian geography. Ottawa, 1954. 19 p. Mimeographed. (*Its:* Bibliographical series no. 3. Cumulative edition)

Contains 223 references (22 arctic) to theses and dissertations (mainly unpublished) to be found in Canadian and U. S. colleges and universities. Arrangement is regional, theses being listed alphabetically by author under each province or territory. Author index is included. **Copy seen:** CaMAI.

CANADA. DEPT. OF NATIONAL HEALTH AND WELFARE, *see* Pett, L. B. Nutrition survey methods . . . 1953. No. 36743.

33871. CANADA. DEPT. OF NORTHERN AFFAIRS AND NATIONAL RESOURCES. Canadian Eskimo art. Ottawa, Queen's Printer, 1954. 39 p. text map, 41 photographs, drawings.

Contains illustrations with brief text describing Eskimo art and conditions under which it is executed. Abstract designs and carvings in stone and ivory of human figures, mammals, birds, and fish are shown; the artists and their

localities are named. Skin pictures and designs created by Eskimo women are also depicted. Carving tools are sketched. Objects photographed were mainly collected by James A. Houston under auspices of the Canadian Handicrafts Guild, in the Canadian Eastern Arctic—east and west coasts of Hudson Bay and Baffin and Ellesmere Islands. Reviewed in *Canadian art*, Autumn 1954. v. 12, no. 1, p. 32. *Copy seen:* CaMAI.

33872. CANADA. DEPT. OF NORTH-ERN AFFAIRS AND NATIONAL RE-SOURCES, NORTHERN ADMINIS-TRATION AND LANDS BRANCH. Flora, fauna and geology of the North-west Territories. Ottawa, Queen's Print-er, 1954. 35 p. 6 illus., 4 text maps

Contains description of plants, animals, landforms, and climate. Trees of four subdivisions of the boreal forest region (mixedwood, northern coniferous, Mac-kenzie lowlands, and northern transition sections) and plants of the region north of the tree line are briefly discussed. Tundra (barren-ground) mammals, wood-land mammals, fur-bearing and other terrestrial animals, marine mammals, fish, and birds are listed with brief notes; the geology of the Canadian Shield, Cordilleran region and Interior Plains is discussed. Two main climatic regions (1) Arctic Islands and mainland north of the tree line and (2) areas bordering the Mackenzie River south of the tree line, are recognized. Table gives mean temperatures for stations in both regions and compares them with stations of same latitudes in Europe.

Copy seen: DLC.

33873. CANADA. DEPT. OF NORTH-ERN AFFAIRS AND NATIONAL RE-SOURCES. WATER RESOURCES DI-VISION. Surface water supply of Canada. Arctic and western Hudson Bay drainage and Mississippi drainage in Canada; in British Columbia, Alberta, Saskatchewan, Manitoba, the Northwest Territories, and western Ontario. Cli-matic years 1947-48 and 1948-49, 1949-50 and 1950-51. Ottawa, 1953, 1954. 2 v.: 456 p., 515 p. text map, tables. (*Its:* Water resources paper, no. 105, 109)

Includes data for Mackenzie River at Simpson and Norman Wells, Slave River at Fort Smith and Bell Rock, Great Slave Lake basin, Liard River basin, Great Bear Lake basin, Nelson and Churchill River basins. In most cases monthly and daily discharge and monthly summaries

of lake levels, inflow and outflow are given for years ended Sept. 30, 1948, 1949, 1950, and 1951. Daily gauge heights are given for some stations. For earlier data on these rivers basins see *Arctic Bibliography*, No. 21104.

Copy seen: DGS.

33874. CANADA. DEPT. OF RE-SOURCES AND DEVELOPMENT. Ca-nadian Arctic plantlife. Ottawa, 1953? 4 p. Mimeographed.

Contains brief general description of plant adaptation to short seasons; the four major plant communities: rock desert or fell-field, tundra, strand, and fresh-water are characterized. The direct and indirect importance of plants in the economy of man in the Arctic is stressed.

CANADA. DEPT. OF RESOURCES AND DEVELOPMENT, *see also* Storr, C. B. Elementary English for the Eskimo. 1950. No. 37646.

33875. CANADA. DEPT. OF RE-SOURCES AND DEVELOPMENT. NORTHERN ADMINISTRATION AND LANDS BRANCH. Administration of the Northwest Territories. Ottawa, Queen's Printer, 1953. 31 p. 5 illus., text map, tables. 115 refs.

History (1870-1947) and present ad-ministrative organization of the territo-ries (since Dec. 1, 1950, under the North-ern Administration and Lands Branch of the Dept. of Resources and Development) is outlined. Form of government, duties of officials, electoral districts and local government in Yellowknife are described. Medical and hospital services, education, functions of the Royal Canadian Mounted Police and Royal Canadian Air Force, and the results of the decennial census of 1951 are discussed. *Map* shows location of administrative offices, R.C.M.P. posts, hospitals, government health centers, schools, industrial homes, missions, and trading posts. A selected bibliography on many phases of the Canadian Arctic is appended.

Copy seen: DLC.

33876. CANADA. DEPT. OF RE-SOURCES AND DEVELOPMENT. NORTHERN ADMINISTRATION AND LANDS BRANCH. Industries of the Northwest Territories. Ottawa, Queen's Printer, 1953. 35 p. 5 illus., text map, tables.

Contains a survey of natural resources: petroleum; uranium at Great Bear Lake,

gold in the Yellowknife region, Pine Point (Great Slave Lake) lead-zinc deposits, mineral prospects in Keewatin District; mining regulations; fur trade, with tabulation of kinds, numbers and value of pelts, 1941-1952; conservation, game and fishing regulations, and game preserves; Great Slave Lake fisheries; water power prospects; vegetable gardening; reindeer industry in the reserve east of the Mackenzie Delta; Eskimo handicrafts; lumbering; general information on employment, business, supplies and commodities.

Copy seen: DLC.

33877. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT. NORTHERN ADMINISTRATION AND LANDS BRANCH. Transportation and communications in the Northwest Territories. Ottawa, Queen's Printer, 1953. 31 p. 4 illus., text map.

Contains brief survey of transportation routes and services: by inland waters, coast, air, roads, and the Eastern Arctic Patrol. Sledges, dogs and types of harness are described. Mail and radio services are stated. Ninety-four settlements and trading posts, including those in northern Quebec and Manitoba served by the Eastern Arctic Patrol, are listed, with brief descriptions of facilities and approx. lat. and long. Map shows location of water routes, commercial air routes, highways, railways, radio stations, meteorological reporting stations and post offices.

33878. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT. WATER RESOURCES DIVISION. Surface water supply of Canada. Pacific drainage, British Columbia and Yukon. Climatic years 1946-47 and 1947-48, 1948-49 and 1949-50. Ottawa, 1952, 1953. 2 v. tables. (*Its:* Water resources paper no. 106, 110)

Includes data for Yukon River drainage basin: in 1946-1948, Yukon River, Bennett Lake, Teslin Lake, Teslin, Mayo and Takhini Rivers; in 1948-1950, these rivers, also Atlin Lake, Atlatno River, Lindeman and Marsh Lakes, Stewart River. In most cases monthly and daily discharge for years ended Sept. 30, 1947 through 1950, are given. Miscellaneous measurements are given in 1946-1948 for Stewart River and Minto Creek, and in 1948-1950 for Jackson (Fish) Creek, Duncan Creek, Fish Lake Project Ditch, Louise Lake Ditch, Mayo River, McQueston River,

Minto Creek, and Porter Creek. For earlier data on these river basins see *Arctic Bibliography* No. 2758, 21105.

Copy seen: DGS.

33879. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT. WATER RESOURCES DIVISION. Surface water supply of Canada. St. Lawrence and southern Hudson Bay drainage . . . climatic years 1949-1950 and 1950-1951. Ottawa, 1953. 459 p. (*Its:* Water resources paper, no. 107) Text in English and French.

Includes data (p. 424-49) for southern Hudson Bay drainage on monthly and daily discharge of the Kenogami, Missinaibi, Mattagami, Abitibi, Harricana, and Nottaway River tributary basins for the period Oct. 1, 1949-Sept. 30, 1951. Maximum, minimum, mean and per square mile discharge in second feet, and the run-off depth in inches on drainage area are given. For earlier data, see *Arctic Bibliography*, No. 2759 and 21106.

33880. CANADA. DEPT. OF TRANSPORT. List of lights and fog-signals Newfoundland, including the coastal waters of Labrador of the Dominion of Canada. Corrected to the 1st January, 1954. Ottawa, Queen's Printer, 1954. 80 p.

Includes 30 stations (p. 44-47) on the Labrador coast between 51°58' N. and 56°28' N. Information for each station includes: lat. and long., color of lights and fog signals, their character and period, height in ft. above high water, miles seen in clear weather, character of apparatus, description of building, year established and altered, and remarks on number of signals per minute, and whether in operation during open navigation. Alphabetical index of stations is added.

Copy seen: DLC.

33881. CANADA. DEPT. OF TRANSPORT. Marine activities in the North, season 1950[-1953]. Ottawa, 1951-1954, in progress. 4 v. tables. Mimeographed.

For each year, a brief summary is given of Canadian Government and commercial shipping from Montreal and Quebec to points on the Labrador coast, Hudson Strait, and Hudson Bay (including Churchill and Fort Chimo) in the Eastern Arctic; also from Waterways (Alta.) and Norman Wells (Mackenzie District) to Port Brabant, Coppermine,

Cambridge Bay, and Spence Bay in the Western Arctic. Following this summary are reports from each ship, which usually include the master's, medical, meteorological, and ice reports, as well as cargo statement and itinerary followed.

File seen: CaOT; CaOGB; DN-HO (1952-).

33882. CANADA. DEPT. OF TRANSPORT. Navigation conditions on the Hudson Bay Route from the Atlantic Seaboard to the port of Churchill. Season of navigation 1952[-1953]. Ottawa, 1953, 1954, *in progress*. 2 v.: 78 p. 114 p. text map, tables. (*Its:* Annual report 24, 25)

Each report contains information on: opening and closing of navigation season; fog reports July-Nov.; navigation aids; navigation and ice reports of Canadian Government ships *C. D. Howe* and *N. B. McLean* and other ships using the route; shipping report from the port of Churchill; hydrographic information; ice reconnaissance reports by the Royal Canadian Air Force; meteorological reports from the *C. D. Howe*, *N. B. McLean* and weather stations in Hudson Bay and Strait; ice reports from weather stations; dimensions and equipment of the two Government ships. Report for 1952 contains glossary of ice navigation terms. Report for 1953 includes historical note on the Hudson Bay Route by N. L. Nicholson; list of charts, sailing directions and tide tables; shipping report: Resolution Island; and analysis of ice reports from Hudson Bay shipping by A. D. Hood. Earlier years' reports are listed as *Arctic Bibliography*, No. 21107.

33883. CANADA. DEPT. OF TRANSPORT. Radio aids to marine navigation, 1953. Ottawa, Queen's Printer, 1953. 61 p. tables, 7 text maps. (*Its:* Notice to mariners)

This "Special notice to mariners" is published in early spring of each year; additions and alterations are contained in the regular Notices. Information on the Labrador coast, Northwest Territories, Hudson Bay, and Hudson Strait is found in Pt. 2 which is divided into seven schedules showing (1) coast stations, (2) direction finding stations, (3) automatic radio beacon stations, (4) loran stations, (5) radar stations, (6) stations transmitting weather, ice, and other navigation reports, and (7)

stations performing other special services. Information given for each station includes lat. and long., call sign, calling frequency, hours of service, type of information transmitted; and, for radar and loran stations, the type of station, rate, pair designation, and maximum and minimum time delay. *Maps* show locations of stations.

33884. CANADA. EXPERIMENTAL FARMS SERVICE. Dominion Experimental Substation, Fort Simpson, Northwest Territories. Progress report, 1947-1953. Ottawa, 1954. 48 p. illus. 32 tables.

Contains first progress report of the substation established in 1947 "to explore the agricultural potential and to accumulate reliable data of crop response in the District of Mackenzie." Located at 61°52' N. 121°21' W., it serves the area from 60° N. to Aklavik at 68°14' N. including the Yellowknife region on the east and Liard River valley on the southwest. Particular attention is paid to the valleys of the Mackenzie River system and principal settlements on Great Slave Lake. Physical geography of the Fort Simpson region is described. Reports are made on cereal crops, field husbandry, forage crops, horticulture, recommended gardening practices, off-station activities, animal husbandry, poultry, and active projects. *Appendices* contain data on population of settlements in Mackenzie District 1951, climatic tables, and an exploratory soil survey from Waterways, Alberta, to Aklavik.

Copy seen: CaOGB.

33885. CANADA. EXPERIMENTAL FARMS SERVICE. Dominion Experimental Substation, Whitehorse, Yukon Territory; progress report, 1945-1952. Ottawa, Queen's Printer, 1954. 43 p. 6 illus., 11 tables.

Soils, topography, vegetation, and climate of the region are described. Monthly and annual meteorological data for 1945-1952, the substation having been established (60°43' N. 135°03' W.) in Oct. 1944. Reports are given on animal husbandry, cereals, field husbandry, grass and forage crops, horticulture, and poultry. Results of tests on animal breeds, and varieties of cereals, forage crops, vegetables, fruits, ornamentals, and annual and perennial flowers are given. Off-station cooperative activities

and active projects of the station are listed.

Copy seen: DLC.

33886. CANADA. FISHERIES RESEARCH BOARD. Annual report for 1953. Ottawa, Queen's Printer, 1954. 185 p. graphs, tables.

Includes (p. 101-103) report on the work of the *Calanus* in northern Hudson Bay and western Hudson Strait, July 10-Sept. 16, 1953, during which 55 collecting stations were occupied. Work also included: six hydrographic sections; temperature, oxygen, salinity, and phosphate determinations on 155 water samples from 29 stations; 72 plankton hauls; fishing by various methods at many stations. Most of the field work was devoted to study of seals (49 taken at southwest Baffin Island) and walrus (six, from Southampton and Coats Islands). Laboratory studies include an analysis of feeding habits of seals (collected 1947-1953) and work with field material of crustaceans, polychaete worms, molluscs, and appendicularians.

33887. CANADA. GEOLOGICAL SURVEY. RADIOACTIVITY DIVISION. Prospecting for uranium in Canada. Ottawa, Queen's Printer, 1952. 167 p. fold. map, diagr., 3 tables.

Contains general information necessary for uranium prospectors, including re-

quirements of the Atomic Energy Control Board; regions favorable for prospecting; nature and distribution of Canadian radioactive mineral deposits; devices and methods for detecting radioactivity; tests for uranium; use of Geiger counter and scintillation instruments. Radioactive minerals found in Canada are listed and briefly described, properties of the more common uranium and thorium materials are tabulated, and information is given on sampling and evaluation of uranium discoveries. *Appendices* present government purchasing policy for uranium ores and concentrates, extracts from Atomic Energy Control Act (1946) and Regulations, press releases of the Atomic Energy Control Board and a copy of its exploration permit to prospectors.

Copy seen: DGS.

33888. CANADA. HYDROGRAPHIC SERVICE. Atlantic coast tide and current tables, 1954. Ottawa, Queen's Printer, 1953. 145 p. tables. (*Its*: Tidal publication, no. 1)

Contains information obtained to and through 1952 for the St. Lawrence region and northward, including Labrador, Hudson Bay and Strait, and the Canadian Arctic Islands. For the Labrador coast: time differences are given for tides in 21 localities from Belle Isle Strait to Cape Chidley, and in Hamilton Inlet; tidal currents in Hamilton Inlet are described. For Hudson Bay, James Bay, and Hudson Strait: tide tables are given for Churchill, Man. and Moosonee, Ont. showing time of high and low water daily, June 1-Nov. 30; time differences and tide currents in Hudson Strait are described. For Arctic Islands and Beaufort Sea: time difference for tides in 30 localities are given.

33889. CANADA. HYDROGRAPHIC SERVICE. British Columbia pilot (Canadian edition). Volume II. Northern portion of the coast of British Columbia, including the coast of British Columbia from Cape Caution to Portland Inlet, and the southern coast of Alaska together with the Queen Charlotte Islands. 3rd ed. 1953. Ottawa, Queen's Printer, 1954. 305 p. fold. map, tables. Prepared by R. B. Young. Includes Notices to mariners referring to the district, to no. 103 of 1953. Supersedes 2d. edition 1945.

Contains general information on use of charts, lights and signals, pilotage, communications, quarantine, meteorology,

inner passages, currents, and tides. Sailing directions include northern and southern sections of Dixon Entrance between the Queen Charlotte Islands (B. C.) on the south and Prince of Wales and Dall Islands (Southeast Alaska) to the north (p. 265-68) in the region approx. $54^{\circ}30'-55^{\circ}20'$ N. $129^{\circ}30'-133^{\circ}30'$ W.

Copy seen: DLC; DN-HO.

33890. CANADA. HYDROGRAPHIC SERVICE. Tide levels and tidal bench marks. Ottawa, King's Printer, 1952. 88 p. tables, 3 fold. maps. (*Its:* Tidal publication, no. 30) Prepared by Mr. C. M. Cross.

Includes data on tidal levels and bench marks for 18 stations on the Labrador coast, Hudson Strait, Hudson and James Bays. Information includes lat. and long. of station, bench mark elevation, high water, low water, extremes, and mean levels of tides, and length of record. Bench marks for each station are described and specifically located on house, bridge, pier, etc. Yearly and monthly means of tide level are given for Churchill, Man., and Forteau Bay, Labrador.

Copy seen: DLC.

CANADA. HYDROGRAPHIC SERVICE, *see also Canadian weekly bulletin.* Chart Gr. Slave Lake. 1948. No. 33953.

33891. CANADA. METEOROLOGICAL SERVICE. Addendum to Volume I of Climatic summaries for selected meteorological stations in Canada. Average values of temperature and precipitation. Toronto, 1954. 29 p. tables.

Contains data supplementing *Arctic Bibliography*, No. 2796. These include all available average values for Yukon Territory (ten stations), Northwest Territories (38), and Newfoundland-Labrador (6); many of these stations have been in operation more than ten years, but average values not hitherto available in published form. Included also are previously unpublished average values for first-order observing stations in other provinces, including Northern Ontario (three stations), Manitoba (five) and Quebec (nine). In most cases these records are for approx. ten years ending 1950. Stations are listed with lat., long., and height above sea level. Data comprise average daily maximum, minimum and mean temperatures, average rainfall, snowfall, and average total precipitation.

Copy seen: CaMAI; DWB.

33892. CANADA. METEOROLOGICAL SERVICE and U. S. WEATHER BUREAU. Appendix of meteorological observations and tabular data for other scientific projects at the joint arctic weather stations at Eureka, Resolute, Isachsen, Mould Bay, and Alert, 1946-1951. Pt. I. Ottawa, Washington, D. C., 1954? 11, 15, 1, 1, 28, 38, 40, 5, 7 p. tables. Mimeographed.

Appendix to *A review . . . 1946-1951* (item below) with tables of observations made by the Canadian Meteorological Service under the Joint Canadian-United States Arctic Weather Station Program. Tables include: daily tidal observations; periodic ice thickness measurements; daily ice and sea-water temperatures; two to four times daily low level air temperatures at Resolute and Alert (also wind direction daily for the latter); daily soil temperatures at Resolute at surface, 8 in., 18 in., 39 in., and 60 in.; monthly duration of sunshine at Resolute 1948-1951; and atmospheric refraction observations at Resolute. Pt. 2 (not yet published) will contain surface weather observations and upper air observations made by the U. S. Weather Bureau.

Copy seen: CaOG.

33893. CANADA. METEOROLOGICAL SERVICE, and U. S. WEATHER BUREAU. A review of the establishment and operation of the joint arctic weather stations at Eureka, Resolute, Isachsen, Mould Bay, and Alert; and a summary of the scientific activities at these stations, 1946-1951. Ottawa, Washington, D. C., 1953. 147 p. text map, 4 graphs, tables. Mimeographed.

Contains description of plans for, and establishment of the five stations in the Canadian Arctic Islands: Eureka (80° N. $85^{\circ}56'25''$ W.), Resolute ($74^{\circ}41'03''$ N. $94^{\circ}54'17''$ W.), Isachsen ($78^{\circ}46'40''$ N. $103^{\circ}31'40''$ W.), Mould Bay ($76^{\circ}14'16''$ N. $119^{\circ}20'28''$ W.), and Alert ($82^{\circ}30'06''$ N. $62^{\circ}19'47''$ W.) between Apr. 1947 and Aug. 1950, and reconnaissance of Bridport Inlet on Melville Island (75° N. 109° W.) in 1948 and 1951. Other subjects discussed in some detail include: maintenance of the stations (fire protection, waste disposal, food and fuel storage, mechanical equipment); methods of resupply (loading and unloading operations by sea, ice navigation, airlift operations); personnel; meteorological program; special scientific projects by station personnel (permafrost drilling and

soil temperature, tidal observations, ice reports, snow studies, tests of equipment, etc.); the Resolute magnetic observatory and seismograph and ionospheric stations; arctic buildings; projects of transient scientific personnel (wildlife, archeological, biological, geologic, and geographic surveys, the Northern Insect Surveys); and radio communications. Data from the stations were published as *Appendix*, No. 33892.

Copy seen: CaOGB; DWB.

33894. CANADA. METEOROLOGICAL SERVICE. Summary of weather conditions associated with freezing precipitation. Special tabulation prepared for U. S. Weather Bureau. [Toronto], 1953. 11 p. tables.

Contains tables showing average number of hours and days of freezing precipitation in each month for 44 Canadian stations, based on hourly observations taken in 1951 and 1952. Highest and average winds and lowest and average temperatures (taken from daily abstracts rather than hourly observations) are also given for each month. Stations include: Snag and Watson Lake, Yukon Territory; Fort Smith and Yellowknife, Mackenzie District; Frobisher, Baffin Island; Churchill, Manitoba.

33895. CANADIAN ARMY JOURNAL. Alaska Highway bridge. (Canadian Army journal, May 1952. v. 6, no. 2, p. 69-73, 6 illus.)

Contains note (based on news release by *Armed Forces news*, Ottawa) on the 1600 ft. bridge over the Donjek River (at Mile 1130), the longest bridge on the Alaska Highway. It was opened to traffic in summer 1952.

Copy seen: DLC.

33896. CANADIAN ARMY JOURNAL. Operation Canon. (Canadian Army journal, Feb. 1948. v. 2, no. 2, p. 9-15, 29-32, 4 illus., text map)

Contains detailed description of part played by the Canadian Army and Air Force in the rescue of Rev. Canon J. H. Turner, severely injured on northern Baffin Island. A rescue flight was made Oct. 2-4 from Rivers, Man., via Churchill and Coral Harbour (Southampton Island) to the mission at Moffet Inlet, Baffin Island (77°11' N. 84°28' W.). Preparations, the flight, parachute drop of men and supplies (in absence of landing facilities), and an unsuccessful attempt to move the patient by boat from Moffet Inlet to Arctic Bay 70 mi. to the north are described. After seven weeks, when the ice on a nearby lake afforded landing, patient and party were evacuated by aircraft Nov. 21. Weather and travel conditions, reconnaissance for airstrip, etc., are stressed.

Copy seen: DLC.

33897. CANADIAN ARMY JOURNAL. Vehicle winterization and articization [sic]. (Canadian Army journal, July 1947. v. 1, no. 4, p. 30-32, graph, table)

Three sets of winter conditions under which vehicles must operate in Canada, and the terms "limited winterization," "winterization," and "articization" are defined. Limits of the last definition are: (1) average temperature below -4° F.; (2) low for 48 hrs. -60° F.; (3) low for 24 hrs. -80° F.; (4) possible high winds. Necessary dilution of crankcase oil, antifreeze problems (and the development of an alcohol which freezes below -100° F.), and the heating of batteries are discussed.

Copy seen: DLC.

33898. CANADIAN AVIATION. Beating ski trails to their door. (Canadian aviation, Jan. 1937. v. 10, no. 1, p. 8-9, 27, illus.)

Contains account of the career of the brothers, Carman and Warner Elliott of Sioux Lookout, (Ont.) as designers and builders of aircraft skis since 1927. Special purpose skis built by them for Admiral Byrd, Lincoln Ellsworth, Henry Ford, Canadian and U. S. Governments, and for commercial air services in the bush country are noted.

Copy seen: DLC.

33899. CANADIAN AVIATION. Lost in the Arctic. (Canadian aviation, Sept. 1937. v. 10, no. 9, p. 3)

Editorial describing rescue operations initiated to locate S. A. Levanevskii's airplane lost Aug. 13, 1937, on a flight from Moscow over the North Pole. "The mishap will act as a brake on the rather optimistic beliefs as to the feasibility of arctic flying which had apparently been bolstered by the two previous successful flights."

Copy seen: DLC.

33900. CANADIAN AVIATION. Northland air fleet rests. (Canadian aviation, Nov. 1937. v. 10, no. 11, p. 26, illus.)

Contains brief account of commercial air transport operations into the Arctic of aircraft based at Edmonton, Alberta. Operations cease near the end of October due to winter conditions.

Copy seen: DLC.

33901. CANADIAN AVIATION. River transport north from Edmonton. (Canadian aviation, April 1939. v. 12, no. 4, p. 42, illus.)

Brief survey of the freighting activities during 1938 of the Mackenzie River Transport (Hudson Bay Co.), the Northern Transportation Co. Ltd. (Eldorado Gold Mines Ltd.) and other smaller companies on the water system extending 2,000 miles north from Waterways, Alberta. Mining activities in the North increased freight tonnage from 11,000 tons in 1936 to 25,000 tons in 1938. Capacity of vessels (freight and passenger), barges, portage facilities, etc. are noted.

Copy seen: DLC.

33902. CANADIAN AVIATION. Short-cutting the globe. (Canadian aviation, July 1937. v. 10, no. 7, p. 20, map)

Brief account of recent Russian trans-polar flights to North America; advantages and prospects of developing

inter-continental air service across the north polar region. *Copy seen:* DLC.

33903. CANADIAN AVIATION. Wheel-ski combination used successfully. (Canadian aviation, Jan. 1939. v. 12, no. 1, p. 39)

Contains brief note reporting use of the wheel-ski combination for the first time in the history of Canadian commercial aviation. The flight was from Cooking Lake, Alberta, to Great Bear Lake, Mackenzie District. The dual under-carriage offered a solution to the snow-shortage difficulty encountered by fliers based in the Edmonton area during early winter.

Copy seen: DSG.

33905. CANADIAN MINING JOURNAL. Aggressive exploration. (Canadian mining journal, Aug. 1953. v. 74, no. 8, p. 125)

Describes the extensive exploration program in 1953 (14 parties in the field, 5 in Labrador and the remainder in Newfoundland) of the Newfoundland and Labrador Corp. Besides the iron ore deposits in western Labrador, recent finds of copper in the central areas and titanium in the eastern area near Lake Melville are reported.

Copy seen: DLC.

33906. CANADIAN MINING JOURNAL. American Yellowknife. (Canadian mining journal, Oct. 1953. v. 74, no. 10, p. 114-15)

Describes briefly mining developments on the property of American Yellowknife on Eastern Island, in Great Slave Lake in 1953, a nickel-copper ore deposit with lesser amounts of silver, gold, and cobalt. A uranium prospect in which the company has acquired management control and a 50 percent interest in the Marian River area is also noted (p. 114).

Copy seen: DLC.

33907. CANADIAN MINING JOURNAL. Consolidated Discovery Yellowknife. (Canadian mining journal, June and Oct. 1953. v. 74, no. 6, p. 97; and no. 10, p. 114)

Describes mining developments in 1953 on the gold property of the Consolidated Discovery Yellowknife Mines Ltd. in the Giauque Lake area, 65 miles north of Yellowknife town, Mackenzie District.

Copy seen: DLC.

33908. CANADIAN MINING JOURNAL. Discovery Yellowknife. (Canadian mining journal, Jan., Mar., May 1953. v. 74, no. 1, p. 84-85, no. 3, p. 122-23; no. 5, p. 128)

Discovery Yellowknife Gold Mine, 52 miles north of Yellowknife in Mackenzie District, presents data on 1952 development; in March issue, asks for Canadian Government's assistance in the construction of a road and power line to its mine. May issue reports on the Snare River hydro-electric power plant line to Discovery Mine.

Copy seen: DLC.

33909. CANADIAN MINING JOURNAL. Fenimore Iron Mines. (Canadian mining journal, Feb., May., June, and Sept. 1953. v. 74, no. 2, p. 84-85; no. 5, p. 146-47; no. 6, p. 148, 150; no. 9, p. 170)

Annual report of the company for the fiscal year ended Sept. 30, 1952 is summarized in Feb. issue. In May, developments at the mines on the west coast of Ungava Bay are described. June issue has discussion of plans of Dutch and German interests to participate in the extension of iron mining to the Ungava Bay area. September issue contains notes of financing negotiations and drilling developments. Mineralized zones carrying copper, zinc, and low nickel values were discovered adjacent to company's present concessions.

Copy seen: DLC.

33910. CANADIAN MINING JOURNAL. Flying geologists. (Canadian mining journal, Nov. 1952. v. 73, no. 11, p. 104)

Describes the aerial reconnaissance geologic mapping by geologists of the Geologic Survey of Canada of 57,000 square miles of Archaean greenstone in the Precambrian Shield north of the 60th parallel and west of Hudson Bay, using

two Hiller helicopters. Operation Keewatin, as it was termed, is also discussed by Dr. C. S. Lord on p. 102.

Copy seen: DLC.

33911. CANADIAN MINING JOURNAL. Giant Yellowknife Gold Mines. (Canadian mining journal, Dec. 1953. v. 74, no. 12, p. 98)

Describes results of development work at the Giant Yellowknife Gold Mines in the Mackenzie District in the third quarter of 1953.

Copy seen: DLC.

33912. CANADIAN MINING JOURNAL. God's Lake Gold Mines. (Canadian mining journal, Apr., Sept. 1953. v. 74, no. 4, p. 122, 124; no. 9, p. 13)

Summary of the 1952 annual report of the God's Lake Gold Mines Ltd. in Manitoba (Lynn Lake area). Sept. issue includes data on the company's activities in the Lynn Lake and Eldon Lake (copper-zinc) and the Nickel Lake Mines claims.

Copy seen: DLC.

33913. CANADIAN MINING JOURNAL. Hudson Bay Exploration and Development Co. (Canadian mining journal, Apr. 1953. v. 74, no. 4, p. 102, 106)

Describes developments by this company of deposits of silver-lead zinc ore, and copper-nickel deposits, in the Kluane Lake district of Yukon Territory.

Copy seen: DLC.

33914. CANADIAN MINING JOURNAL. Hudson Bay M. & S. Co. (Canadian mining journal, June, Aug. 1953. v. 74, no. 6, p. 95; no. 8, p. 90-92)

Presents results of development work on nickel-copper-precious metal ore deposits in the Kluane Lake district of Yukon Territory by the Hudson Bay Mining and Smelting Co., Ltd., and discusses the financial relations between this company and Yukon Mining Ltd. Aug. issue includes data on developments in 1953 on its Kluane Lake nickel prospect, and on a large low-grade silver-lead-zinc deposit near the Canol Highway just inside Yukon Territory.

Copy seen: DLC.

33915. CANADIAN MINING JOURNAL. Javelin obtains concession. (Canadian mining journal, Aug. 1953. v. 74, no. 8, p. 124-25)

General description and discussion of the iron ore concession of 1,472,000 acres granted the Canadian Javelin Foundries and Machine Works Ltd. of

Montreal by the Newfoundland and Labrador Corp. at the southern end of the Labrador Trough in southwest Labrador. Also reported in *Engineering and mining journal*, Sept. 1953, v. 154, no. 9, p. 164. *Copy seen:* DLC.

33916. CANADIAN MINING JOURNAL. Klondike Keno Mines. (Canadian mining journal, Jan. 1953. v. 74, no. 1, p. 85)

Presents data as to progress on the operations at the Klondike Keno Mines Ltd. at its Blue Rock property in the Keno Hill lead-silver district of the Yukon in 1952. *Copy seen:* DLC.

33917. CANADIAN MINING JOURNAL. Labrador Mining and Exploration. (Canadian mining journal, Apr. 1953. v. 74, no. 4, p. 134-35)

Summary of annual report for 1952 of the Labrador Mining and Exploration Company, interested in development of iron mines in the Burnt Creek region of Labrador-Quebec. *Copy seen:* DLC.

33918. CANADIAN MINING JOURNAL. Marion [sic] River. (Canadian mining journal, Oct. 1953. v. 74, no. 10, p. 116)

Describes staking, testing, and preliminary development work on a series of parallel radioactive fault zones in the Marian River region, 110 miles northwest of Yellowknife in Mackenzie District, by various companies. *Copy seen:* DLC

33919. CANADIAN MINING JOURNAL. More Ungava ore located. (Canadian mining journal, Jan. 1953. v. 74, no. 1, p. 116)

Notes new finds of iron ore in the Hope's Advance Bay and Payne areas west of Ungava Bay, Quebec.

Copy seen: DLC.

33920. CANADIAN MINING JOURNAL. New iron deposit. (Canadian mining journal, Oct. 1953. v. 74, no. 10, p. 161)

Notes discovery of an iron ore deposit in Labrador about 110 miles northeast of Sept Îles and its optioning to the Iron Ore Co. of Canada.

Copy seen: DLC.

33921. CANADIAN MINING JOURNAL. The new North. (Canadian mining journal, Nov. 1954. v. 75, no. 11, p. 56)

Editorial on use of the Hudson Bay Route to bring in supplies to the North

Rankin Inlet Nickel Mines in summer 1953 and 1954 and to ship out grain estimated at 12 million bushels in 1954; speculation upon possible role of the Route in mineral development of the Canadian North. *Copy seen:* DGS.

33922. CANADIAN MINING JOURNAL. Oil. (Canadian mining journal, Oct. 1953. v. 74, no. 10, p. 116)

Briefly describes oil exploration and well drilling in 1953 in various parts of the Mackenzie District by several companies. *Copy seen:* DLC.

33923. CANADIAN MINING JOURNAL. Pine Point Mines. (Canadian mining journal, May 1953. v. 74, no. 5, p. 126-27)

Describes development work being done by Pine Point Mines Ltd., a subsidiary of the Consolidated Mining and Smelting Co. of Canada Ltd., in exploration of a lead-zinc area on the south shore of Great Slave Lake, in Mackenzie District.

Copy seen: DLC.

33924. CANADIAN MINING JOURNAL. Prospecting in the far North. (Canadian mining journal, Mar. 1953. v. 74, no. 3, p. 120)

Notes on lead prospects along Mackenzie River and a tungsten prospect at Blow River, in the Yukon, about 80 miles west of Aklavik on the arctic coast.

Copy seen: DLC.

33925. CANADIAN MINING JOURNAL. Prospectors Airways Company. (Canadian mining journal, Apr. 1953. v. 74, no. 4, p. 102)

Describes briefly developments on nickel-copper sulfide deposit of Prospectors Airways Company on White River, Yukon Territory 40 miles northwest of Hudson Bay Exploration Company's Kluane Lake nickel-copper deposit.

Copy seen: DLC.

33926. CANADIAN MINING JOURNAL. Quebec-Labrador Dev. Co. (Canadian mining journal, June 1953. v. 74, no. 6, p. 152)

Aerial magnetometer survey of iron ore area in north Quebec carried out in winter of 1952-53 by the Quebec-Labrador Development Co., is to be tied in with detailed geologic mapping done in 1952.

Copy seen: DLC.

33927. CANADIAN MINING JOURNAL. Rankin Inlet Mines. (Canadian mining journal, May, Aug., Sept. 1953.

v. 74, no. 5, p. 132; no. 8, p. 96; no. 9, p. 130-31)

Outlines plans for the development of the Rankin Inlet nickel mines. Aug. issue describes diamond drilling developments in summer 1952. Sept. issue reports on operations in opening up the nickel property. It is on the northwestern shore of Hudson Bay, 275 miles north of Churchill. This is first underground mining operation undertaken in Keewatin.

Copy seen: DLC.

33928. CANADIAN MINING JOURNAL. Rankin Inlet Nickel Mines. (Canadian mining journal, Mar. 1954. v. 75, no. 3, p. 69)

Contains summary of letter to shareholders Jan. 27, 1954. Activities in 1954 will be confined to completion of present sinking and drifting program. An attempt will be made to expand ore reserves and to provide funds for further period until completion of a sales contract. Ore samples will be tested to determine mill design and concentrating practice. Finances and reorganization of the company's capital stock are discussed.

Copy seen: DGS.

33929. CANADIAN MINING JOURNAL. Sherritt Gordon Mines. (Canadian Mining journal, May 1953. v. 74, no. 5, p. 128-30)

Notes progress made by the Sherritt Gordon Mines Ltd. toward bringing its Lynn Lake nickel-copper deposits into production and in the construction of the chemical metallurgical plant for the treatment of the concentrates at Fort Saskatchewan, Alberta. Gives summary of the 1952 annual report of the company.

Copy seen: DLC.

33930. CANADIAN MINING JOURNAL. Surveying permits. (Canadian mining journal, Apr. 1953. v. 74, no. 4, p. 139)

Describes iron ore deposits on west shore of Ungava Bay, Quebec, covered by permits to two companies.

Copy seen: DLC.

33931. CANADIAN MINING JOURNAL. The Yukon Cons. Gold Corp. (Canadian mining journal, Aug. 1953. v. 74, no. 8, p. 83)

Summarizes results of 1952 dredging and hydraulic operations of the Yukon Consolidated Gold Corp. Ltd. in Yukon Territory.

Copy seen: DLC.

33932. CANADIAN SURVEYOR. Synopsis of surveying and mapping activities by federal and provincial governments. (Canadian surveyor, 1954. v. 12, no. 3, p. 181-98)

Includes under each agency (Geodetic Survey, Topographical Survey, Hydrographic Service, etc.) and each province, work done in arctic regions during the 1953 season. Progress made and areas covered in shoran trilateration, triangulation, topographic mapping control, charting of bays and straits, and boundary surveys are described.

Copy seen: DGS.

33933. CANADIAN TRANSPORTATION. Canada's weather ships on the North Pacific. (Canadian transportation, Jan. 1951. v. 72, no. 1, p. 43-46, 7 illus.)

*On Nov. 24, 1950 Canada undertook responsibility of maintaining and manning the most northerly Pacific Ocean weather station, "P" for Peter, at 50° N. 145° W., part of a six-station network. Three ships, the *Stonetown*, *St. Catharines*, and *St. Stephen*, have been assigned to the position. Interior and exterior of the ships and the meteorological and rescue services are described.*

Copy seen: DLC.

33934. CANADIAN TRANSPORTATION. Canadian ships supply arctic weather stations. (Canadian transportation, July 1954. v. 75, no. 7, p. 427-28)

*Contains note on Operation NORS-1, the supply of Canadian-U. S. weather stations in the Queen Elizabeth Islands (except for Alert on Ellesmere Island) in summer 1954. For the first time this will be an all-Canadian undertaking. Six ships will take part, the Dept. of Transport's *d'Iberville*, *N. B. McLean*, *C. D. Howe*, and *Edward Cornwallis* and two chartered vessels. The *C. D. Howe* and *N. B. McLean* will leave in June on the regular Eastern Arctic Patrol, calling at 28 settlements, and will join the other ships at Resolute Bay in Aug. Notes on duties are given.*

Copy seen: DLC.

33935. CANADIAN WEEKLY BULLETIN. Ottawa, Nov. 16, 1945- in progress. (Issued Nov. 16, 1945-Aug. 29, 1947 as *C. I. S. weekly*)

Weekly six-page publication of the Information Division, Canadian Dept. of External Affairs; it contains current news on political, economic, military, social,

and scientific events in Canada. Frequent news items concern subarctic and arctic regions. Some of the recent articles are listed below. *File seen:* DLC.

33936. CANADIAN WEEKLY BULLETIN. Aklavik has own radio. (Canadian weekly bulletin, May 16, 1947. v. 2, no. 27, p. 5)

The most northerly radio station in North American, CHAK, at Aklavik, Mackenzie District is noted: it provides entertainment, news and weather reports for the local residents and isolated trappers and traders in the surrounding area.

Copy seen: DLC.

33937. CANADIAN WEEKLY BULLETIN. Alaska Highway traffic booming. (Canadian weekly bulletin, June 27, 1952. v. 7, no. 34, p. 4)

Data on traffic for 1951 and the first four months of 1952, the Highway's condition, improvements, etc.

Copy seen: DLC.

33938. CANADIAN WEEKLY BULLETIN. Alaska Highway troubles. (Canadian weekly bulletin, June 27, 1947. v. 2, no. 33, p. 4)

Contains notes on the most severe spring breakup since the construction of the Highway, with flood waters, floating ice, driftwood, etc., impeding traffic. The most affected areas are indicated.

Copy seen: DLC.

33939. CANADIAN WEEKLY BULLETIN. Arctic health surveys. (Canadian weekly bulletin, Apr. 2, 1953. v. 8, no. 22, p. 2).

Extensive X-ray program among the coastal Eskimos of the Western Arctic is announced. The work, to be carried out by a public health party with aircraft, is part of the Dept of Health and Welfare's Indian Health Service's effort to diagnose TB and arrange for hospital care as indicated. With favorable flying conditions, about a thousand persons are to be examined. The value of X-ray in TB detection and combat is discussed on the basis of experience with similar mass-surveys among Indians.

Copy seen: DLC.

33940. CANADIAN WEEKLY BULLETIN. Arctic memorial. (Canadian weekly bulletin, Oct. 2, 1953. v. 8, no. 48, p. 4)

Contains short account of the dedication of a monument to the victims of the supply plane crash on July 31, 1950, at

Alert, north Ellesmere Island. The ceremony, held Aug. 25, 1953, was attended by 11 American and Canadian personnel, transported to Alert by the U. S. ice-breaker *Staten Island*.

Copy seen: DLC.

33941. CANADIAN WEEKLY BULLETIN. Arctic patrol. (Canadian weekly bulletin, June 27, 1952. v. 7, no. 34, p. 3)

The 30th Eastern Arctic patrol, the *C. D. Howe's* third arctic assignment is announced. Itinerary, passengers, etc., are noted.

Copy seen: DLC.

33942. CANADIAN WEEKLY BULLETIN. Arctic planning. (Canadian weekly bulletin, Oct. 2, 1953. v. 8, no. 48, p. 4)

Contains note on appointment, by Canadian Minister of Resources and Development, of Graham W. Rowley as Secretary-Coordinator of the Advisory Committee on Northern Development (a new post). The committee will be responsible for coordinating activities of all departments of the Canadian Government in development of the North.

Copy seen: DLC.

33943. CANADIAN WEEKLY BULLETIN. Arctic sea supply. (Canadian weekly bulletin, Aug. 6, 1954. v. 9, no. 40, p. 3)

Over 4,000 tons of equipment and supplies will be delivered to U. S.-Canadian weather stations at Resolute, Eureka, and Padloping by five ships under direction of the Canadian Dept. of Transport. Stations not accessible by sea will be resupplied by airlift. An earlier note in this bulletin (June 25, 1954, v. 9, no. 34) states that this supply operation (NORS-I) is the first undertaken by Canada alone. The United States will continue to supply the most northerly station, Alert, on Ellesmere Island.

Copy seen: DLC.

33944. CANADIAN WEEKLY BULLETIN. Arctic survey ship. (Canadian weekly bulletin, Aug. 27, 1954. v. 9, no. 43, p. 3)

Canadian Vickers Ltd., Montreal, will construct a twin-screw surveying vessel for the Canadian Hydrographic Service. Built for use in the heavy ice of Canadian Arctic waters, the ship will have a cruising range of 14,000 miles, sufficient for a full season's charting without refueling. It should be in operation in 1956.

Copy seen: DLC.

33945. CANADIAN WEEKLY BULLETIN. Arctic warning line. (Canadian weekly bulletin, Oct. 1, 1954. v. 9, no. 48, p. 6)

Contains text of joint announcement by the Canadian and U. S. Defence Departments, Sept. 27, 1954, on need for an earlier warning of approach of hostile aircraft than that provided by the Mid-Canada Line. Detailed planning for a distant early warning line across the "most northerly practicable part of North America" is underway.

Copy seen: DLC.

33946. CANADIAN WEEKLY BULLETIN. Arctic weather stations. (Canadian weekly bulletin, Mar. 7, 1947. v. 2, no. 17, p. 5-6)

Plan is announced for establishment of nine weather stations in the Canadian Arctic within the next three years, those at Eureka Sound (79° N. 87° W.) on Ellesmere, and at Winter Harbour (74°47' N. 111°15' W.) on Melville Island to be in operation in summer 1947. The purpose is to provide more accurate and longer range weather-forecasting to meet domestic and international obligations. The stations are to be operated for a minimum period of five years to enable assessment of their value. Further reports on this program are given in the *Bulletin*, Oct. 24, 1947, v. 2, no. 50, p. 3-4; and Apr. 30, 1948, v. 3, no. 25, p. 5.

Copy seen: DLC.

33947. CANADIAN WEEKLY BULLETIN. Army in the North. (Canadian weekly bulletin, Feb. 14, 1947. v. 2, no. 14, p. 2-3)

Opportunities in the North, particularly in the Canadian Corps of Signals, which maintains the Northwest Territories and Yukon Radio System. Conditions in, requirements, training, etc., for this service are stated.

Copy seen: DLC.

33948. CANADIAN WEEKLY BULLETIN. Army in the North. (Canadian weekly bulletin, Mar. 21, 1947. v. 2, no. 19, p. 2)

Indoctrination training near Whitehorse, Yukon Territory, of personnel of Princess Patricia's Canadian Light Infantry Regiment, to participate in Exercise Haines is outlined. Travel and bivouac techniques are taught on the trail by local northerners.

Copy seen: DLC.

33949. CANADIAN WEEKLY BULLETIN. Army's cold weather training. (Canadian weekly bulletin, Jan. 30, 1948. v. 3, no. 12, p. 4)

Notes on Canadian Army units regularly stationed in the North, or currently participating in cold weather training exercises; among the latter Exercise Moccasin and Exercise Haines II are mentioned.

Copy seen: DLC.

33950. CANADIAN WEEKLY BULLETIN. Barren lands survey. (Canadian weekly bulletin, Apr. 18, 1947. v. 2, no. 23, p. 2-3)

A 360-mile mapping survey near Fort Churchill, by a Royal Canadian Engineers' party (termed "Bust-ox") is outlined: methods, personnel, supplies, etc.

Copy seen: DLC.

33951. CANADIAN WEEKLY BULLETIN. Canada, U. S. expedition. (Canadian weekly bulletin, July 10, 1953. v. 8, no. 36, p. 5)

Program is announced of the fourth summer's activities of the Beaufort-Sea Expedition, July-Oct. 1953, mainly for oceanographic and hydrographic exploration.

Copy seen: DLC.

33952. CANADIAN WEEKLY BULLETIN. Care of Eskimos. (Canadian weekly bulletin, Oct. 24, 1952. v. 7, no. 51, p. 2)

Plans are outlined for extending elementary, technical and secondary education among Eskimo children; also the establishment of rehabilitation centers for tuberculosis victims, TB detection and treatment; health service in general; supporting handicraft, etc.

Copy seen: DLC.

33953. CANADIAN WEEKLY BULLETIN. Chart Great Slave Lake. (Canadian weekly bulletin, Apr. 2, 1948. v. 3, no. 21, p. 4)

Note on status of the Canadian Hydrographic Service program: charting of routes leading across this lake, harbors of refuge on its shores, and critical areas in the Mackenzie River. Shipping with supplies for Yellowknife and Snare River mining developments will be expedited in unfavorable weather.

Copy seen: DLC.

33954. CANADIAN WEEKLY BULLETIN. Distant early warning line. (Canadian weekly bulletin, Nov. 26, 1954. v. 10, no. 4, p. 1)

Contains text of joint announcement by U. S. and Canadian Governments, Nov. 19, 1954, on the decision to proceed with construction of the Distant Early Warning Line (DEW). Although both Canada and the U. S. will participate, the U. S. will be responsible for work of construction and installation of the radar posts across northernmost Alaska, the Canadian mainland and central Baffin Island. *Copy seen:* DLC.

33955. CANADIAN WEEKLY BULLETIN. "Eager Beaver" exercise. (Canadian weekly bulletin, Jan. 18, 1952. v. 7, no. 11, p. 2)

Note on one of the largest and longest military exercises in the Canadian North, currently being carried out in Yukon Territory to test equipment and personnel, build field defenses and airfields, study snow compaction etc. Some 450 Canadian and U. S. army engineers participate. This exercise was further reported in the *Bulletin*, June 27, 1952. v. 7, no. 34, p. 3. *Copy seen:* DLC.

33956. CANADIAN WEEKLY BULLETIN. Eastern Arctic Patrol. (Canadian weekly bulletin, July 16, 1948. v. 3, no. 36, p. 4)

Activities of the patrol formerly carried out by R. M. S. *Nascope* are undertaken for 1948 by seven vessels (named); itineraries, administrative duties, health service, etc., are mentioned. Further information on the course of the Patrol is given in the *Bulletin*, Aug. 13, 1948, v. 3, no. 40, p. 2) *Copy seen:* DLC.

33957. CANADIAN WEEKLY BULLETIN. Eskimo welfare. (Canadian weekly bulletin, May 30, 1952. v. 7, no. 30, p. 2)

Contains a note on the General Conference on Eskimo Affairs, May 19-20, 1952, under Canadian Government auspices, its conclusions, also the work of the continuing committee. The latter and creation of the Eskimo Research Unit (Mr. J. C. Wright, Chief), in Northern Administration and Lands Branch of the Dept. of Resources and Development are reported in the *Bulletin* Nov. 28, 1952, v. 8, no. 4, p. 4. *Copy seen:* DLC.

33958. CANADIAN WEEKLY BULLETIN. Eskimo welfare. (Canadian weekly bulletin, Nov. 27, 1953. v. 9, no. 4, p. 3)

Appointment of Mr. and Mrs. James A. Houston to the Dept. of Resources and

Development staff is announced, as part of the Government's efforts to diversify the Eskimo economy, now too dependent on the declining fur industry. They will continue the Canadian Handicrafts Guild's promotion of Eskimo handicrafts industry and develop additional outlets, Mrs. Houston working specifically with Eskimo women in home economics as well. *Copy seen:* DLC.

33959. CANADIAN WEEKLY BULLETIN. Eskimos honored. (Canadian weekly bulletin, Dec. 4, 1953: v. 9, no. 5, p. 7)

Twenty Eskimos of the Eastern and Western Canadian Arctic are to be presented the Coronation Medal for outstanding leadership. Among them are three ships' pilots, two construction foremen, and one from the school and nursing station at Coppermine.

Copy seen: DLC.

33960. CANADIAN WEEKLY BULLETIN. Explore arctic islands. (Canadian weekly bulletin, Mar. 11, 1949. v. 4, no. 18, p. 3)

The discovery is announced of some large islands in Foxe Basin, which "have never yet appeared on any published map." Air photographs show one of them as over 70 miles long. Their exploration by a party under T. H. Manning in summer 1949, announced on Mar. 4th, is reported in this *Bulletin* Oct. 21, 1949, v. 4, no. 50, p. 5.

Copy seen: DLC.

33961. CANADIAN WEEKLY BULLETIN. Extension of air defenses in far North. (Canadian weekly bulletin, Apr. 15, 1954. v. 9, no. 24, p. 4)

Statement (Apr. 8) on joint Canadian-U. S. anti-aircraft defense measures in the far North; enlargement of various types of defense; the Pinetree Chain (radar), and establishment of a further radar system generally north of settled territory in Canada; its extension by U. S., and coordination of various radar systems; technical problems, research, etc.

Copy seen: DLC.

33962. CANADIAN WEEKLY BULLETIN. Far North election. (Canadian weekly bulletin, July 23, 1954. v. 9, no. 38, p. 2)

Contains note on 1954 election to be held for four candidates to represent Mackenzie District on the Northwest Territories nine-man council for three years. Nominations will be received

Aug. 9, and polling booths will be set up in early Sept. for the approx. 6,000 Indian, Eskimo, and white voters.

Copy seen: DLC.

33963. CANADIAN WEEKLY BULLETIN. Far North housebuilding. (Canadian weekly bulletin, Mar. 5, 1948. v. 3, no. 17, p. 2-3)

Contains notes on: (1) building structures on piles in permafrost areas; (2) dental service for isolated civilians in the far North as available from Royal Canadian Dental Corps at set scale of fees; (3) agreement between Northwest Territories Council and the Federal Government for promotion of fitness and recreation "north of sixty" under the National Physical Fitness Act.

Copy seen: DLC.

33964. CANADIAN WEEKLY BULLETIN. Find Peary records. (Canadian weekly bulletin, June 12, 1953. v. 8, no. 32, p. 2)

Records left by R. E. Peary on Cape Columbia (87°07' N. 70°28' W.) are reported (May 12, 1953) to have been found by G. Hattersley-Smith, a glaciologist investigating the ice shelf bordering the northern coast of Ellesmere Island. The records are said to look "as if written yesterday."

Copy seen: DLC.

33965. CANADIAN WEEKLY BULLETIN. "Fort Churchill" defined. (Canadian weekly bulletin, July 30, 1948. v. 3, no. 38, p. 4)

Note of a Canadian Army routine order which explains the term as the "field station established to facilitate the study of environmental conditions, and carry out various trials, tests and training under Arctic conditions." Civilian scientists as well as military personnel are engaged, and information regarding clothing, visits, funds, etc., on the station is included.

Copy seen: DLC.

33966. CANADIAN WEEKLY BULLETIN. Glasses for Eskimos. (Canadian weekly bulletin, May 24, 1946. v. 1, no. 28, p. 6-7)

Two expeditions, sponsored by the Canadian Institute for the Blind, are planned for summer 1946. Equipped with eye chart (in Eskimo syllables) and 500 pairs of glasses, they will treat inhabitants of northern Labrador, the east coast of the Hudson Bay, Churchill and

northwestward. Similar work of the previous year is also noted.

Copy seen: DLC.

33967. CANADIAN WEEKLY BULLETIN. Goose Bay "attack." (Canadian weekly bulletin, Mar. 26, 1954. v. 9, no. 21, p. 2)

Contains note on military exercise at Goose Bay air base, Labrador, on Mar. 19, 1954. U. S. and Canadian forces regularly stationed at the base defended it against simulated attack by airborne troops of the U. S. Army, Air Force, and the Royal Canadian Air Force. Object of exercise was to give as much practice as possible to base defenders.

Copy seen: DLC.

33968. CANADIAN WEEKLY BULLETIN. Hudson Bay Route. (Canadian weekly bulletin, Mar. 12, 1954. v. 9, no. 19, p. 6)

Contains note on increasing importance of this route in Canadian grain shipping. Tonnage handled on the railroad in 1953 was 420,000 tons (compared with 80,000 in 1946) and 11 million bushels of grain were exported from Churchill (compared with three million in 1946). Elevator capacity at Churchill will be extended from two and a half million bushels to five million, enabling the port to clear as much as twenty million bushels in a season. Churchill may rank as the third (after Montreal and Vancouver) grain exporting port in Canada.

Copy seen: DLC.

33969. CANADIAN WEEKLY BULLETIN. International weather code. (Canadian weekly bulletin, Aug. 6, 1954. v. 9, no. 40, p. 6)

Contains note on new weather code books distributed to U. S.-Canadian arctic weather stations during the resupply in summer 1954. The new code is result of two international conferences in 1953, and will be used by all countries beginning Jan. 1955, under leadership of the World Meteorological Organization.

Copy seen: DLC.

33970. CANADIAN WEEKLY BULLETIN. Loran stations in the North. (Canadian weekly bulletin, Mar. 28, 1947. v. 2, no. 20, p. 5)

Establishment of two Loran stations in the far North during 1947 (and possibly a third in 1948), to aid air and sea navigation is announced. The way these stations operate, their conjunction with

each other, value, etc., are briefly stated.

Copy seen: DLC.

33971. CANADIAN WEEKLY BULLETIN. Lost islands found. (Canadian weekly bulletin, Sept. 20, 1946, v. 1, no. 45, p. 7)

The relocation of Spicer Islands (68° 10' N. 79° W.) in Foxe Basin by a R. C. A. F. crew is announced. The islands, first discovered early in the 19th century, had not been definitely reported since 1897.

Copy seen: DLC.

33972. CANADIAN WEEKLY BULLETIN. Magnetic Pole's location. (Canadian weekly bulletin, Sept. 19, 1947, v. 2, no. 45, p. 4-6, map)

A seven-week expedition of Dominion Observatory personnel by R. C. A. F. amphibious aircraft in summer 1947, under Paul H. Serson, is reported. The Pole's area was observed to lie in the vicinity of Prince of Wales and Somerset Islands, some 200 miles to the north of its position 50 years ago. Its movements, importance in navigation and orientation generally, as well as the party's scientists and flight officers, apparatus, etc., are noted. Other observations (from the *Edisto*) in 1947, and continuation of the survey work in summer 1948 are reported in the *Bulletin*, Oct. 31, 1947, v. 2, no. 51, p. 5; and July 16, 1948, v. 3, no. 36, p. 5.

Copy seen: DLC.

33973. CANADIAN WEEKLY BULLETIN. Mapping for defence. (Canadian weekly bulletin, Apr. 9, 1954, v. 9, no. 23, p. 5)

Two survey teams (out of nine), composed of members of the Canadian Army Survey Establishment (Ottawa), working in conjunction with the Royal Canadian Air Force and civilian mapping agencies, will carry out field surveys in Yukon and Mackenzie Districts in summer 1954. One, using pack horses, will work in the Aishihik Lake region, Yukon (61°27' N. 137°10' W.); the other will use a helicopter in the "Headless Valley" region of the South Nahanni River, southwest Mackenzie District.

33974. CANADIAN WEEKLY BULLETIN. Mapping the northland. (Canadian weekly bulletin, Apr. 11, 1947, v. 2, no. 22, p. 2-3)

Unprecedented demand for maps in the civilian postwar development of Northwest Territories and Yukon is noted. Status of mapping of the country,

government agencies involved in the program, difficulties, methods, etc., are indicated.

Copy seen: DLC.

33975. CANADIAN WEEKLY BULLETIN. Mobile ionospheric observatory. (Canadian weekly bulletin, Aug. 27, 1948, v. 3, no. 42, p. 2)

The first such mobile laboratory in Canada is announced: it is to operate in a converted railway coach between Portage la Prairie and Churchill, making one round-trip in each season of the year. The character and significance of its work for radio communication is noted.

Copy seen: DLC.

33976. CANADIAN WEEKLY BULLETIN. Movies in the North. (Canadian weekly bulletin, Jan. 14, 1949, v. 4, no. 10, p. 7)

Contains a note on the weekly showing of movies at 37 posts between Edmonton and Alaska; attendance; importance for morale, etc.

Copy seen: DLC.

33977. CANADIAN WEEKLY BULLETIN. Navy mans arctic station. (Canadian weekly bulletin, Oct. 23, 1953, v. 8, no. 51, p. 5)

The Royal Canadian Navy's taking over from the U. S. Air Force of the radio station on Padloping Island (67°06' N. 62°22' W.) is announced. The station provides meteorological service, and navigational aid to aircraft flying the northern route to Europe and the far North. The earlier work of the station, established during World War II as Crystal III, its manning, supply, etc., are noted.

Copy seen: DLC.

33978. CANADIAN WEEKLY BULLETIN. New beluga whale fishery. (Canadian weekly bulletin, July 24, 1953, v. 8, no. 38, p. 2)

The exceptionally good season (1953) of this fishery in the waters of Hudson Bay and the Churchill River is noted, with data on numbers caught (699) size, price, etc.; 283 were taken by one Eskimo hunter.

Copy seen: DLC.

33979. CANADIAN WEEKLY BULLETIN. New exploration data. (Canadian weekly bulletin, June 18, 1954, v. 9, no. 33, p. 4)

Contains note on discovery in early June 1954 of original records of the Peary, Aldrich, and Kruger expeditions, by G. Hattersley-Smith and R. L. Christie during the Ellesmere Ice Shelf

Expedition 1954, northern Ellesmere Island.
Copy seen: DLC.

33980. CANADIAN WEEKLY BULLETIN. New Northern Health Service. (Canadian weekly bulletin, May 28, 1954. v. 9, no. 30, p. 5)

This new agency, a division of Dept. of National Health and Welfare, is announced, May 26, 1954 to coordinate existing services (including those of missions and territorial governments) and to establish new ones. It will operate hospitals, public health and nursing services for those normally a federal responsibility: defense personnel, Indians, Eskimos.
Copy seen: DLC.

33981. CANADIAN WEEKLY BULLETIN. New northern hydro plant. (Canadian weekly bulletin, Nov. 14, 1952. v. 8, no. 2, p. 4)

Opening of a new electric power plant on the Mayo River (63°36' N. 135°53' W.) near Mayo Landing is announced. Its capacity is 3,000 HP expandable to 6,000 HP. Technical data on its structure, transmission lines, etc. are supplied.
Copy seen: DLC.

33982. CANADIAN WEEKLY BULLETIN. Northern Service Officers. (Canadian weekly bulletin, May 21, 1954. v. 9, no. 29, p. 3)

Contains note on new Canadian Government positions in the North. Posts will be at Aklavik and Coppermine in Mackenzie District; Coral Harbour, Southampton Island; Port Harrison and Fort Chimo, northern Quebec; and Frobisher Bay, Baffin Island. Officers will assist the Eskimos and advise the Administration in Ottawa on measures to improve Eskimo life. A later issue of this bulletin (Oct. 22, 1954, v. 9, no. 51, p. 5) announces selection of six men from 300 volunteers. The appointees will undergo training in Ottawa before preceeding north.
Copy seen: DLC.

33983. CANADIAN WEEKLY BULLETIN. Northern wireless stations. (Canadian weekly bulletin. June 30, 1948. v. 3, no. 12, p. 4)

Contains notes on the planned addition of three new stations to the existing 21 of the Northwest Territories and Yukon Radio System, operated by the Royal Canadian Corps of Signals. Construction at one of them, at Brochet, Man. has already begun.
Copy seen: DLC.

33984. CANADIAN WEEKLY BULLETIN. Polar expedition discovers traces of former explorers. (Canadian weekly bulletin, Oct. 1, 1948. v. 3, no. 47, p. 9-10)

Note on the supply voyage summer 1948, of the U. S. S. *Edisto*, U. S. C. G. *Eastwind*, and U. S. S. *Wyandot* to Ellesmere and Cornwallis Islands weather stations. A landing party on Cape Sheridan (82°27' N. 61°27' W.) found copies of notes left in a cairn by Sir George Nares in 1876, and a note left by Admiral Peary (1905), the second to visit the place. The texts of both notes are included in the account, as well as the names of commanders and principal Canadian representatives of the supply mission.
Copy seen: DLC.

33985. CANADIAN WEEKLY BULLETIN. Port of Churchill. (Canadian weekly bulletin, Dec. 24, 1953. v. 9, no. 8, p. 4)

The increase of grain storage facilities in this harbor from 2.5 millions to 5 million bushels is announced, the work to start in 1954 and cost about two million dollars. It will increase maximum potential wheat shipment to twenty million bushels. Further comment on importance of the Hudson Bay Route and elevator capacity of Churchill are reported in the *Bulletin*, Mar. 12, 1954. v. 9, no. 19, p. 6.
Copy seen: DLC.

33986. CANADIAN WEEKLY BULLETIN. Protect seals as food. (Canadian weekly bulletin, Oct. 28, 1949. v. 4, no. 51, p. 3)

Regulations for the preservation of seals as food for Eskimos have been announced by the Canadian Dept. of Fisheries: In Canadian waters and territories north of 60° N. lat. and the waters of Ungava, Hudson and James Bays, seals may be killed only by a resident, for food, and by scientists. Sale of seal meat is similarly restricted.

33987. CANADIAN WEEKLY BULLETIN. Queen Elizabeth Islands. (Canadian weekly bulletin, Feb. 12, 1954. v. 9, no. 15, p. 2)

The "northern islands" of the Canadian archipelago (north of Lancaster and Viscount Melville Sounds (approx. 74° N. 75°-125° W.) are designated collectively as Queen Elizabeth Islands. Some 160,000 sq. mi. in area, with population less than 200, and resources unexplored,

they are a group with peculiar conditions and common problems.

Copy seen: DLC.

33988. CANADIAN WEEKLY BULLETIN. Research in the North. (Canadian weekly bulletin, Feb. 6, 1953. v. 8, no. 14, p. 3)

Opening of a new wing at the Defense Research Northern Laboratory at Fort Churchill, Man., Jan. 25, 1953 is announced. The history of the Laboratory (started winter 1946-47) and its investigations (clothing, terrain, man's response to arctic conditions, food, entomology, behavior of oil products at low temperature) are summarized.

Copy seen: DLC.

33989. CANADIAN WEEKLY BULLETIN. Scientists to Arctic. (Canadian weekly bulletin, July 15, 1949. v. 4, no. 36, p. 2)

Contains notes on Operation Magnetic II, the third joint expedition sent by the Dept. of Mines and Resources and the Royal Canadian Air Force to gather data for the location and movement of the Magnetic Pole. Headed by Ralph D. Hutchison, the party's personnel, its scope, areas of work, significance, equipment, food, etc. are discussed.

Copy seen: DLC.

33990. CANADIAN WEEKLY BULLETIN. 700 scientists meet. (Canadian weekly bulletin, Dec. 10, 1954. v. 10, no. 6, p. 1)

Most of the 43 papers presented at the Sixth Annual Symposium of the Defence Research Board of Canada (Ottawa, Dec. 8-10, 1954) will relate to research in the North. Topics will include improved transportation and communications, and maintenance of health and comfort of troops operating under extreme conditions. About 700 Canadian scientists and Service officers and 80 visitors from the United States and United Kingdom are expected to attend.

Copy seen: DLC.

33991. CANADIAN WEEKLY BULLETIN. Snowmobile dash. (Canadian weekly bulletin, Jan. 22, 1954. v. 9, no. 12, p. 2)

A 917-mile trip over the Alaska Highway (Dawson Creek, B. C. to Whitehorse, Y. T.) was made in 66 hours actual traveling time by Canadian Army Signallers in five Penguin snowmobiles. Feasibility of moving tracked vehicles

over long distances was tested. Snowmobiles were to be used in Exercise Hot-dog in late Jan. 1954.

Copy seen: DLC.

33992. CANADIAN WEEKLY BULLETIN. Tagging walrus. (Canadian weekly bulletin, Dec. 3, 1954. v. 10, no. 5, p. 6)

In summer 1954, Canadian Wildlife Service biologists, working with Eskimos, tagged 30 walrus off the coast of Coats Island in northern Hudson Bay. Information was needed about the walrus population as a result of reports that herds were no longer appearing at accustomed places. Project will be continued.

Copy seen: DLC.

33993. CANADIAN WEEKLY BULLETIN. To move Aklavik. (Canadian weekly bulletin, Dec. 11, 1953. v. 9, no. 6, p. 1-2)

Plan for relocation of Aklavik (68°13' N. 135° W.), the largest community in the Canadian Arctic, is announced to have been approved in principal by the Canadian Government. The town is to be rebuilt in a location safe from erosion of the Mackenzie River and from sinking through the melting permafrost, with conditions permitting proper sanitation and water supply. The new site will be chosen by experts during 1954; after roadways, water and sewage system, etc., are installed, transfer of buildings will begin in the winter of 1955-56. The move is estimated to require four years' time.

Copy seen: DLC.

33994. CANADIAN WEEKLY BULLETIN. Traffic for Port Churchill. (Canadian weekly bulletin, July 26, 1946. v. 1, no. 37, p. 3-4)

Note on activity of a committee representing Hudson Bay Route Association and governments of the three prairie provinces, to promote Port Churchill. A further note, on transportation of the 1946 wheat crop through Port Churchill is given in the *Bulletin*, Sept. 6, 1946, v. 1, no. 43, p. 4.

Copy seen: DLC.

33995. CANADIAN WEEKLY BULLETIN. Ungava Mining Bill introduced. (Canadian weekly bulletin, Mar. 8, 1946. v. 1, no. 17, p. 10)

A bill for promoting mining and industrial development in New Quebec was introduced in the Quebec legislature. Work on a \$200,000,000 mining project

was begun after a grant of a 20-year contract to the Hollinger North Shore Exploration Co. Ltd. to develop natural resources of a three thousand sq. mi. area bordering Labrador. The measure was approved (see this journal Mar. 29, 1946, v. 1, no. 20, p. 8). **Copy seen:** DLC.

33996. CANADIAN WEEKLY BULLETIN. U.S.S.R. in the Arctic. (Canadian weekly bulletin, Jan. 24, 1947. v. 2, no. 11, p. 6)

The small number of stations in northern Canada, for weather reporting and scientific work generally, is stressed in comparison with the extensive development of such work in the Soviet Arctic. From remarks of Dr. A. L. Washburn of the Arctic Institute of North America to the Rotary Club, Montreal.

Copy seen: DLC.

33997. CANADIAN WEEKLY BULLETIN. Western Arctic research. (Canadian weekly bulletin, Nov. 16, 1951. v. 7, no. 2, p. 5)

The hydrographic and oceanographic work of the C. G. M. V. *Cancolim II*, in summer 1951, mainly in the coastal waters of the Beaufort Sea is reported; biological specimens were also collected; astronomical points established, etc.

Copy seen: DLC.

33998. CANADIAN WEEKLY BULLETIN. Western Arctic studies. (Canadian weekly bulletin, Apr. 23, 1954. v. 9, no. 25, p. 2)

An oceanographic and hydrographic study of the Canadian Western Arctic ocean, initiated by the Defence Research Board of Canada in 1951, will continue in summer 1954. As in 1953, it will be a joint U. S.-Canadian operation, supported by two ice-breakers (U. S. Navy, U. S. Coast Guard) equipped with helicopters.

Copy seen: DLC.

33999. CANADIAN WEEKLY BULLETIN. Whooping crane mystery. (Canadian weekly bulletin, July 9, 1954. v. 9, no. 36, p. 6)

During helicopter survey (by Canadian Dept. Northern Affairs and National Resources) of Wood Buffalo Park (58°-60°30' N. 112°-115°30' W.) in southern Mackenzie District—northern Alberta, summer 1954, as many as six whooping cranes (world population 24) with young were seen. The cranes winter in Texas, but nesting grounds have not been found. This discovery may solve that problem.

Copy seen: DLC.

34000. CANADIAN WEEKLY BULLETIN. Yukon potatoes. (Canadian weekly bulletin, July 25, 1947. v. 2, no. 37, p. 3)

Activities at Whitehorse, the farthest north of the agricultural stations of the Dominion Experimental Farms Service: tests for a suitable potato; alfalfa and grass varieties developed at the station; use of Indian labor, etc.

Copy seen: DLC.

CANDIOTTI, Dr., see Bénard, C. M. E. P. Dans l'Océan Glacial et en Nouvelle-Zemble, 1908. 1909. No. 33534.

34001. CANDOLIN, YNGVE, 1901— Seal finger (spekkfinger) and its occurrence in the gulfs of the Baltic Sea. Åbo, 1953. 51 p. illus., 27 tables, incl. 10 fold. at end. (Acta chirurgica scandinavica. Supplementum 177) 36 refs.

An extensive study of the disease based on widespread investigations in the Scandinavian countries and other areas of the world. Following an introductory part on seals and seal hunting, the monograph deals with: distribution, name and literature of the disease; author's own material (244 occurrences in 193 patients); entrance, incubation, symptoms, joint affection, histology, X-ray picture; course; treatment, invalidity and prognosis, etc. The work probably represents the most comprehensive treatment of the subject which has appeared to date.

Appended (on 10 unnumbered folded leaves) are data of author's case histories.

34002. CANFIELD, GEORGE HOWARD, 1886— . Water-power investigations in southeastern Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 105-127, fold. map)

Contains a list of developed water powers in Southeast Alaska (prepared by Leonard Lundgren, U. S. Forest Service), a list of streams affording power sites, and general descriptions of each of nine gaging stations with tabulated statistics on daily and monthly discharge measurements at each station for parts of 1915 and 1916, also for Ketchikan Creek at Ketchikan from Nov. 1909 to June 1912, as well as 1915-16. **Copy seen:** DLC.

34003. CANFIELD, GEORGE HOWARD, 1886— . Water power investigations in southeastern Alaska. (In: U. S.

Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 101-154, fold. maps)

Gives a list of developed water powers as of Jan. 1, 1917, prepared by Leonard Lundgren, district engineer of the U. S. Forest Service; also lists streams affording power sites. Presents tabulated statistical records of monthly and annual discharge and run-off measurements at numerous stream-gaging stations in Southeast Alaska for various periods from 1909 to 1916.

Copy seen: DLC.

34004. CANFIELD, GEORGE HOWARD, 1886- . Water-power investigations in southeastern Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 43-83, fold. map)

Gives a list of developed water-powers in 1917, prepared by Leonard Lundgren, district engineer of the U. S. Forest Service; also lists streams affording power sites. Presents tabulated statistical records of monthly and annual discharge and run-off measurements and daily gage heights for numerous stream-gaging stations for 1917. Lists area and elevation above sea level of various lakes available for storage reservoirs in Southeast Alaska.

Copy seen: DLC.

34005. CANFIELD, GEORGE HOWARD, 1886- . Water-power investigations in southeastern Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1918. Bulletin, 1920, no. 712, p. 53-90)

Presents tabulated statistical data of daily and monthly discharge and run-off measurements of various stream-gaging stations in Southeast Alaska for 1917-1918.

Copy seen: DLC.

34006. CANFIELD, GEORGE HOWARD, 1886- . Water-power investigations in southeastern Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1919. Bulletin, 1921, no. 714, p. 143-87)

Presents tabulated statistical data on monthly discharge and runoff for 1917-19 for various stream-gaging stations in Southeast Alaska; also tabulates data on certain streams on which power may be developed: drainage area, mean annual flow, elevation of lake or dam site above tide, storage, area of lake or basin, length of conduit, mean static head, and continuous horsepower at 80 percent efficiency.

Copy seen: DLC.

34007. CANFIELD, GEORGE HOWARD, 1886- . Water-power investigations in southeastern Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1920. Bulletin, 1922, no. 722, p. 75-115, fold. map)

Presents tabulated statistical data on monthly discharge and run-off, 1917-1920, at various stream-gaging stations in Southeast Alaska.

Copy seen: DLC.

34008. CANTWELL, GEORGE G. From a collector in Alaska. (*Osprey*, Mar. 1897, v. 1, no. 7, p. 97-98)

Contains informal notes on various birds (bald eagle, Kowak chickadee, Aleutian song sparrow, Alaska winter wren, Alaskan three-toed woodpecker, etc.) observed near Howkan, Southeast Alaska.

Copy seen: DSI; MH-Z.

34009. CANTWELL, GEORGE G. Nesting of the Alaska bald eagle (*Osprey*, Jan. 1899, v. 3, no. 5, p. 66-67, illus.)

Its nesting on Eagle and Dall Islands, near Howkan Island, Alaska, is noted with remarks on the eggs.

Copy seen: DSI; MH-Z.

34010. CANTWELL, GEORGE G. Notes from Alaska. (*Nidologist*, Feb. 1897, v. 4, p. 59)

Contains informal notes on some bird species in the vicinity of Juneau.

Copy seen: DSI; MH-Z.

34011. CANTWELL, GEORGE G. Notes on the egg of the marbled murrelet. (*Auk*, 1898, t. 15, no. 1, p. 49)

*Contains a record of an egg taken from the oviduct of a marbled murrelet, *Brachyramphus marmoratus*, killed in the Prince of Wales Archipelago, on May 23, 1898; the first known to science.*

Copy seen: DSI; MH-Z.

34012. CANTWELL, GEORGE G. On isolated Alaskan Islands. (*Osprey*, Jan. 1898, v. 2, no. 5, p. 63-65, illus.)

Contains notes on sea birds observed during a trip on June 8, 1897, to Egg Island, 200 miles west of Fort Wrangell, Alaska. The famous bird rookery on the island is described and photographs of various birds and nests are added.

Copy seen: DSI; MH-Z.

34013. CANTWELL, GEORGE G. Wheatear in Alaska. (*Osprey*, Jan. 1897, v. 1, no. 5, p. 66)

Very brief note on a wheatear observed at Juneau, Alaska, on Oct. 21st, among

the stones and grass of a tide marsh.

Copy seen: DSI; MH-Z.

34014. CAPPS, STEPHEN REID, 1881-1949. The Chakachamna-Stony region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1928. Bulletin, 1930, no. 813, p. 97-123, 2 fold. maps)

Presents results of a field investigation by the author in 1928 of the Chakachamna-Stony region of the Alaska Range in southwestern Alaska west of the upper end of Cook Inlet. Describes previous surveys, the present investigation, and the geography, geology, and mineral resources of the region. There are no developed mineral deposits. Evidences of mineralization are noted, and possibilities of finding economically workable deposits of placer and lode gold in the region are discussed.

Copy seen: DLC.

34015. CAPPS, STEPHEN REID, 1881-1949. The Cold Bay district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1921. Bulletin, 1923, no. 739, p. 77-116, 2 fig., fold. map) 16 refs.

Presents the results of a geologic investigation in 1921 by the author, of the oil possibilities of the Puale (formerly Cold) Bay district on the southeast part of the Alaska Peninsula in southwest Alaska. Describes the history and previous surveys, the geography, geology, geologic structures and indications of oil. Outlook for finding petroleum in commercial quantities in this general region is reported good.

Copy seen: DCL.

34016. CAPPS, STEPHEN REID, 1881-1949. An early Tertiary placer deposit in the Yentna district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 53-61, 2 fig.)

Presents the results of a study by the author in 1923, of an early Tertiary (Eocene) gold-placer deposit in the Yentna district, on the western edge of the Susitna basin, on the southeastern flank of the Alaska Range, in south-central Alaska. Describes the location and general geology of the region. The ancient gold placer deposits occur on Dollar, Thunder, and Willow Creeks and are traceable in a NE-SW direction for 11 miles. The white quartz gold-bearing basal Eocene gravels were warped subsequent to deposition and partly removed by later glaciation. *Copy seen:* DLC.

34017. CAPPS, STEPHEN REID, 1881-1949. The eastern portion of Mount McKinley National Park. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1930. Bulletin, 1933, no. 836, p. 219-300, 3 maps, incl. 1 fold., col.)

Presents the results of field investigations of the Mt. McKinley National Park region in 1930 and earlier years and by other investigators. Describes briefly the geography (drainage, relief, climate, vegetation, wildlife, travel routes); the geology (principal features and stratigraphy in detail); and the mineral resources of the region. These include the placer gold deposits, lodes containing gold, silver, copper, lead, zinc, antimony, and arsenic, and the lignitic or subbituminous coal deposits. Geologic map of the Central Alaska Range, 1:250,000, contour interval 200 ft., is included.

Copy seen: DLC.

34018. CAPPS, STEPHEN REID, 1881-1949. Geology and mineral resources of the region traversed by the Alaska Railroad. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1922. Bulletin, 1924, no. 755, p. 73-150, 8 maps incl. 6 fold.)

Describes the geography, geology, and mineral resources along the route of the Alaska Railroad from Seward on the Gulf of Alaska to Fairbanks in the Yukon-Tanana region of central Alaska, 468 miles to the north. *Copy seen:* DLC.

34019. CAPPS, STEPHEN REID, 1881-1949. Gold lode mining in the Willow Creek district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 177-86)

Contains descriptions of the mining developments in 1917, on the gold-quartz lodes of the Willow Creek district in the Talkeetna Mts., south-central Alaska. Vein quartz carrying considerable molybdenite was reported in the Archangel Creek basin. Gold and silver production at lode mines in the Willow Creek district, 1908-1917, is given.

Copy seen: DLC.

34020. CAPPS, STEPHEN REID, 1881-1949. Gold lodes and placers of the Willow Creek district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 245-72, fold. map)

Presents the results of author's field examination in 1913 of the gold deposits of this district in the Talkeetna Mts. in

south-central Alaska (between 61°40'–61°52' N. and 149°07'–149°30' W.). Previous geologic work in this area is summarized and the geography and geology of the district described. The mineral resources include gold-quartz lodes and gold placers. The gold placers on Grubstake Gulch, Willow Creek, and Fishhook Creek are described. The geologic occurrence of the gold lodes is summarized and descriptions are given (p. 255–72) of many of the gold-quartz mines and prospects. Author's subsequent report on the district is *Arctic Bibliography*, No. 2845.

Copy seen: DLC.

34021. CAPPS, STEPHEN REID, 1881–1949. Gold mining in the Willow Creek district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 195–200)

Describes the developments from 1913 through 1915 at various gold lode mines and prospects and gold-placer operations in the Willow Creek district in south-central Alaska. Contains a table of the gold and silver production of the district from 1908 through 1915. This supplements author's bulletin on the district, *Arctic Bibliography*, No. 2845.

Copy seen: DLC.

34022. CAPPS, STEPHEN REID, 1881–1949. Gold placers of the Yentna district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 174–200, fold. maps)

Describes the exploration of the Yentna district (approx. 61°51'–62°45' N. 150°30'–151°55' W. north of Cook Inlet), the geography (topography, drainage, routes of travel, vegetation); and gives a short summary of the geology. The mineral resources include gold placer deposits and coal (lignite). The general features of the occurrence of the placer gold are described, and the occurrence of the gold placers on the various creeks are considered in some detail. The lignite deposits of the district are briefly described. Author's bulletin is listed as *Arctic Bibliography*, No. 2846.

Copy seen: DLC.

34023. CAPPS, STEPHEN REID, 1881–1949. Kodiak and adjacent islands, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1937. iv, 111–84, p., 14 illus. on 7 plates, 3 maps (2 fold., col.). (U. S. Geological Survey. Bulletin 880–C. Mineral resources of Alaska, 1935)

Presents the results of field investigations by the author of the geography and geology of Kodiak and adjacent islands in southwestern Alaska in 1934 and 1935. Descriptions are given of the location of the area, previous explorations and surveys, and the present investigations. Under geography are discussed the relief, coastline, drainage, climate, vegetation, wildlife, population, and routes of travel. The geology is considered in detail and the gold lode and placer deposits and the mining developments on them are described. Geologic reconnaissance map, 1:250,000, is attached.

Copy seen: DLC.

34024. CAPPS, STEPHEN REID, 1881–1949. Kodiak and vicinity, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1937. iv, 93–134 p. 7 illus. on 4 plates, 5 maps (3 fold., 2 col.). (U. S. Geological Survey. Bulletin 868–B. Mineral resources of Alaska, 1934)

Presents the results of a field investigation by the author in 1934 on Kodiak Island and on several small islands in the vicinity of the town of Kodiak. Describes the location and area, previous surveys and the present investigation. Under geography the relief, drainage, climate, vegetation, wildlife, population, and routes of travel are described. The geology and general conditions of mineral deposition in the area are discussed. Brief mention is made of the gold placers with descriptions of several gold-quartz lodes. Topographic map 1:250,000, contour interval 200 ft.

34025. CAPPS, STEPHEN REID, 1881–1949, and B. L. JOHNSON. Mineral deposits of the Ellamar district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1912, Bulletin, 1913, no. 542, p. 86–124, fold. map)

Presents results of an areal and economic geologic study of the region, some 60 square miles, surrounding Ellamar on the northeast border of Prince William Sound, Alaska. The geography and geology are described (p. 86–96), and the copper deposits discussed in detail, largely chalcopyrite and at that time an unknown copper mineral, later determined to be chalmersite but now called cubanite (p. 96–105). Detailed descriptions are added (p. 105–124) of the copper mines and prospects, and some

gold-quartz lodes. The authors' later report is *Arctic Bibliography*, No. 2847.

34026. CAPPS, STEPHEN REID, 1881-1949. Mineral investigations in the Alaska Railroad belt, 1931. Washington, D. C., U. S. Govt. Print. Off., 1933. ii, p. 119-35, fold. map. (U. S. Geological Survey. Bulletin 844-B. Mineral resources of Alaska, 1931)

Presents results of intensive studies made by the U. S. Geological Survey at the request of the Alaska Railroad, of the mineral resources of the area tributary to the Railroad. Description of the several field parties engaged in this work in 1931, is followed by preliminary statements as to the more important results of the specific investigations of the following nine definite areas—Anthracite Ridge coal basin, Moose Pass - Hope district, Kenai Peninsula, Birdwood, Willow Creek and Valdez Creek districts, West Fork of the Chulitna River, Mount Eielson, Kantishna, and the Fairbanks districts.

34027. CAPPS, STEPHEN REID, 1881-1949. Mineral resources of the Bonniifield region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 218-35, fold. map)

Contains the results of a geologic reconnaissance survey along the north slope of the Alaska Range in central Alaska between the crest of the range and the lowlands of the Tanana River, and extending from the Nenana River on the west to the Delta River on the east. The geographic and geologic features of the region are described. The mineral resources discussed include the placer and lode gold deposits of the Bonniifield district and the Tertiary coal (lignite) deposits of the Nenana coalfield.

Copy seen: DLC.

34028. CAPPS, STEPHEN REID, 1881-1949. Mineral resources of the Chisana-White River district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 189-228, fold. map, index map)

Contains the results of field investigation by the author in 1914 in the Chisana-White River district in central-eastern Alaska, between the Wrangell Mts. and the Canadian boundary. Discusses the mining history of the district and previous geologic investigations. Describes the

geography and geology of the district, and the gold, copper, and lignite deposits. The gold placers are considered in detail, the general features, mining conditions, origin and conditions favoring their formation are given. The placer mines and prospects are described. Author's bulletin on the area is *Arctic Bibliography*, No. 2832.

Copy seen: DLC.

34029. CAPPS, STEPHEN REID, 1881-1949. Mineral resources of the Kantishna region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 279-331, index map, fold. map)

Contains the results of a field investigation in 1916, by the author, of a region lying along the north side of the Alaska Range in central Alaska, northeast of Mt. McKinley and including portions of the Nenana and Kantishna Rivers. Summarizes previous investigation and the mining history of the region, and describes the geography, the general geology, and the economic geology. Descriptions are given of the gold placer and gold lode deposits and also of the deposits of Tertiary lignite. Author's bulletin on this region is described as *Arctic Bibliography*, No. 2838.

Copy seen: DLC.

34030. CAPPS, STEPHEN REID, 1881-1949. Mineral resources of the upper Chulitna region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 207-232, fold. map)

Contains the results of a field investigation, by the author, in 1917, of the geology and mineral resources of the upper Chulitna region (Broad Pass mining district) on the southeast slope of the Alaska Range in central Alaska approx. 63° N. 150° W. Describes the geographic features, the general geology, and the economic geology. Summarizes the history of mining and prospecting, and discusses the general features of the gold, copper, and antimony lodes of the region; describes numerous lode prospects, and also discusses the gold placer mines and prospects, and the Tertiary coal (lignite) deposits.

Copy seen: DLC.

34031. CAPPS, STEPHEN REID, 1881-1949. Mineral resources of the western Talkeetna Mountains. (*In:* U. S. Geological Survey. Mineral resources of

Alaska in 1917. Bulletin, 1919, no. 692, p. 187-205, fold. map)

Contains the results of a field investigation in 1917, by the author, of the mineral resources of the western Talkeetna Mts. in south-central Alaska north of Knik. The geography, and the general and economic geology are described. Summary of previous geologic investigations of the region and history of the mining developments is given. The general features of the mineral resources—ores of copper or of copper and gold—are considered and description is given of the prospects on which any considerable amount of development work had been done.

Copy seen: DLC.

34032. CAPPS, STEPHEN REID, 1881-1949. The Mount Spurr region, Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1927. Bulletin, 1930, no. 810, p. 141-72, 2 fold. maps)

Gives the results of a field investigation in 1927, by the author, of the Mount Spurr region in southwestern Alaska, west of the head of Cook Inlet. Describes previous surveys, the itinerary of the present investigation, geography, geology, and mineral resources of the region. Discusses possibilities of finding metallic mineral deposits, and notes briefly the occurrence of Tertiary lignites near Tyonek on Cook Inlet and their possible extension.

Copy seen: DLC.

34033. CAPPS, STEPHEN REID, 1881-1949. Notes on the geology of the Alaska Peninsula and Aleutian Islands. Washington, D. C., U. S. Govt. Print. Off., 1934. ii, 141-53 p., fold. map. (U. S. Geological Survey. Bulletin 857-D. Mineral resources of Alaska, 1932)

Presents results of a geologic investigation by the author in 1932, as a geologist accompanying a U. S. Navy hydrographic expedition working along the Alaska Peninsula and in the Aleutian Islands. Describes the geography of the region, the rocks, glaciation; and gives local observations at points where it was possible to study the geology—Unalaska, Atka, Adak, Kiska, Attu Islands, Cold Bay and Leonard Harbor, and Dolgoi Island and Pavlov Bay.

Copy seen: DLC.

34034. CAPPS, STEPHEN REID, 1881-1949, and M. N. SHORT. A ruby silver prospect in Alaska. (*In:* U. S. Geological Survey. Mineral resources of

Alaska in 1924. Bulletin, 1926, no. 783, p. 89-95, fig.)

Presents the results of a field investigation of the Mint ruby-silver mine by S. R. Capps in Sept. 1924, and of a laboratory study of the ore specimens by M. N. Short. Harry Townsend, of the U. S. Bureau of Mines, furnished copies of his 1924 survey and the results of his sampling. The Mint mine is located in the upper Susitna basin in central Alaska, on Portage Creek, three miles above its junction with the Susitna River and about nine miles east of the Chulitna Station on the Alaska Railroad, some 274 miles by rail north of Seward. The ore is quartz carrying a variety of sulfides, the most valuable and predominant ore mineral being pyrrargyrite (Ag_3SbS_4), associated and probably genetically related to a shattered and altered andesite dike following a zone of shearing in slates. The mineral association resembles that at the Premier and Mayo mines, Yukon Territory.

Copy seen: DLC.

34035. CAPPS, STEPHEN REID, 1881-1949. The Skwentna region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1926. Bulletin, 1929, no. 797, p. 67-98, 2 maps, incl. 1 fold. in pocket)

Presents results of a field investigation by the author in 1926 in cooperation with William M. Beach, of New York, sportsman and photographer of game, in the headwaters of the Skwentna River and adjacent portions of the Kuskokwim basin along the Alaska Range in southwestern Alaska. Summarizes previous surveys and the present expedition. Describes the geography, geology and mineral resources. The region shows considerable mineralization, but sufficient prospecting has not been done to determine whether economically profitable gold lodes or placers exist. Known coal occurrences are described.

Copy seen: DLC.

34036. CAPPS, STEPHEN REID, 1881-1949. The Toklat-Tonzona River region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1925. Bulletin, 1927, no. 792, p. 73-110, 2 fold. maps)

Presents the results of a field investigation by the author in 1925 of the geology and mineral resources of the Toklat-Tonzona River region on the northwest side of the Alaska Range, most of it within Mount McKinley National Park. Describes the geography, geology, and

economic geology. The mineral resources include lode deposits of gold, silver, lead, zinc, and copper, and gold placer deposits.

Copy seen: DLC.

34037. CAPPS, STEPHEN REID, 1881-1949. The Turnagain-Knik region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 147-94, 3 fold. maps, 7 fig.)

Presents the results of a geologic field investigation by the author in 1915 in the Turnagain Arm-Knik Arm region of south-central Alaska (approx. 61° N. 149°20' W.), east of Anchorage and Knik. The geography, geology, and mineral resources (gold placers and gold quartz lodes) of the region are described. Considerable attention is given to the Quaternary geology and the glacial history of the region.

Copy seen: DLC.

34038. CAPPS, STEPHEN REID, 1881-1949, and R. TUCK. The Willow Creek-Kashwitna district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1935. ii, 95-113, 2 maps (1 fold., part col.). (U. S. Geological Survey. Bulletin 864-B. Mineral resources of Alaska, 1933)

Presents the results of a field investigation by the authors in 1933, of this district in the Talkeetna Mts. of south-central Alaska. Describes the location, area, and the previous and present investigations of this district. The geography, geology, and economic geology are treated. Under geography are discussed the topography and drainage, climate, vegetation, settlements and routes of travel. The geologic description covers the igneous rocks which underlie the entire area, the glaciation of the district, and the Quaternary deposits. The general features of the economic geology are outlined, and the prospecting conditions, placer deposits, lode prospecting, and future prospecting considered.

34041. CAREY, L. A. Menihek power development. (Engineering journal, May 1954. v. 37, no. 5, p. 549-56, 563, 3 illus., 2 text maps, diagrs., 3 tables)

Design and construction of the power plant at Menihek on the Ashuanipi River (53°38' N. 66°27' W.) in Labrador are described. The development will serve the Knob Lake iron mining center about 35 miles to the north and will be completed in summer 1954. Selection of the site, physical features of the region, estimation of water supply and available power are dealt with. Equipment, diversions made in the river, utilization of local aggregates and fill materials, construction of earth dams, and transportation are described. During most of the construction period a 330-mile airlift was necessary to transport men, supplies, and equipment from Seven Islands, Que. to the site.

34042. CARLSON, LOREN DANIEL, 1915-, and others. Acclimatization to cold environment; physiologic mechanisms. U. S. Air Force. Air Materiel Command. Wright-Patterson Air Force Base, Dayton, Ohio, Mar. 1951. 36 p. 12 text fig., 11 tables, (U. S. Air Force, AF Technical Report No. 6247. University of Washington Contract No. AF33/038/422) Mimeographed. 28 refs. *Other authors:* A. C. Young, H. L. Burns, and W. F. Quinton.

"The physiologic factors involved in acclimatization to cold environments are discussed. The mechanisms of acclimatization appear to involve an increased caloric intake balancing the increased heat output. From the data presented, it seems that due to readjustments which provide for an increased shell and reduced core temperature, acclimatized individuals should require less caloric input than non-acclimatized on intermittent exposure. This change is accompanied by a relatively increased circulation to the hands which should increase efficiency. The various gaps in data and the practical implications are briefly discussed."—Authors' abstract. Based on work conducted at Ladd Field, Alaska, during the winter 1949–1950. *Copy seen:* DSG.

34043. CARLSON, LOREN DANIEL, 1915-, and W. COTTLE. Adaptation of caloric balance in rat exposed to cold. (Federation proceedings, Mar. 1953. v. 12, no. 1, pt. 1, p. 23)

Contains a study of metabolic response to cold exposure in young and mature animals by observations on food intake and by direct calorimetry. The results indicate "that the major change in the rat exposed to cold is in ability to maintain metabolism at a high level."

Copy seen: DLC.

34044. CARLSON, LOREN DANIEL, 1915-. Adaptation to cold. (American Meteorological Society. Bulletin, June 1954. v. 35, no. 6, p. 280)

Contains abstract of paper presented at the 131st National Meeting of the Society, Sept. 8–10, 1954, Columbus, Ohio. Basic mechanisms involved in adaptation to cold environments are those regulating heat production in and heat loss from the body. The body maintains a fairly constant core temperature at 37° C. In cold environments, a peripheral insulation layer partially protects the core. Heat loss depends on the ambient temperature, wind velocity, and

the changes in the effects of radiation. Physiological factors involved are changes in peripheral circulation, in insulation, and in heat production.

34045. CARLSON, LOREN DANIEL, 1915-. Adequate stimulus for shivering. (Federation proceedings, Mar. 1954. v. 13, no. 1, pt. 1, p. 23)

The sequence of responses in subjects exposed to cooling of 0.6° C./minute from 25° C. was: skin cooling, reduced blood flow, shivering and increased oxygen uptake. Lowered deep body temperature increased the tendency to shiver. Time of onset of shivering also depended on body region exposed.

Copy seen: DLC.

34046. CARLSON, LOREN DANIEL, 1915-. The adequate stimulus for shivering. (Society for Experimental Biology and Medicine. Proceedings, Feb. 1954. v. 85, no. 2, p. 303–305, table) 15 refs.

Contains an account of observations (skin and deep body temperatures, heat loss, O₂ consumption and finger blood flow) of subjects exposed to a temperature falling by 0.6 C. per minute from 24°–25° C. It is postulated that adequate stimulus for shivering is "a combination of the rate at which cold sensitive end organs are discharged, the number stimulated, and the thermal state of the center."

34047. CARNES, WILLIAM G., Editor. A preliminary geographical survey of the Kongakut-Firth River area, Alaska-Canada. Washington, D. C., U. S. National Park Service, Apr. 1954. 56 p. 40 illus., text map. Mimeographed. 11 refs.

Results of a U. S. Office of Naval Research-National Park Service project, to study part of the wilderness area of northeast Alaska-northwest Yukon extending from the Brooks Range to the Arctic Ocean (approx. 68°30'–69°45' N. 139°–142°30' W.). Major ground work and aerial reconnaissance were carried out June 11–Aug. 26, 1953 by a five-man party led by L. Sumner, and more limited work by L. Sumner and others in 1951 and 1952 utilized. Weather

observations, history of the region, scenery, and wildlife, are briefly discussed. The area's value for scientific research and possibilities for recreation are outlined. An archeological survey for trace of man's migration from Asia to North America is reported by A. F. Ricciardelli: little material was found in the mountains, but other, lower regions should be explored. A geologic traverse of the Kongakut River region is reported by M. D. Mangus. Stratigraphy, structure, and geologic history are briefly described, possibilities of uranium deposits and petroleum reservoirs noted.

34049. CARSOLA, ALFRED JAMES, 1919- . Extent of glaciation on the continental shelf in the Beaufort Sea. (American journal of science, June 1954. v. 252, no. 6, p. 366-71, 2 text maps, graphs) 7 refs.

Soundings were made over 35,000 sq. mi. of sea floor off Alaska and northwest Canada between Banks Island and 165° W. long., 1950-52. In both the Beaufort and Chukchi Seas the continental shelf is terminated by a shelf-break, at approximately 35 fathoms, which may extend eastward as far as Novaya Zemlya. Shallowness of the shelf and shelf-break suggests a different history for this area from that of the glaciated Arctic off northern Europe, Greenland, and most of the Canadian Arctic Islands. Evidence indicates that the shelf formed before the Pleistocene, at a time when the shores of the Arctic Ocean and adjacent seas were ice-free most of the year. At its eastern end the shelf shows evidence of limited local glaciation. It probably did not undergo continental glaciation.

34050. CARSOLA, ALFRED JAMES, 1919- . Microrelief on Arctic Sea floor. (American Association of Petroleum Geologists. Bulletin, July 1954. v. 38, no. 7, p. 1587-1601, illus., 4 text maps, profiles) 26 refs.

Contains discussion of soundings made during the Beaufort Sea Expeditions of the U. S. Navy in 1950, 1951, and 1952 in the Beaufort and Chukchi Seas. "The upper continental slope in the Arctic Ocean off Alaska and northwestern Canada is characterized by a series of low mounds and troughs. These features are found only between the edge of the shelf and the 200-fathom isobath on the slope, and on the sides of two shelf valleys. The origin of this microrelief is not clear, but the evidence available suggests that it is best explained as formed by mass movement on low slopes in regions where tides are small and tidal currents are weak."—*Author's abstract.*

34051. CARSOLA, ALFRED JAMES, 1919- . Recent marine sediments from Alaskan and northwest Canadian Arctic. (American Association of Petroleum Ge-

ologists. Bulletin, July 1954. v. 38, no. 7, p. 1552-86, illus., 6 text maps, 4 graphs, 9 tables) 41 refs.

Geological data collected during the Beaufort Sea Expeditions of the U. S. Navy in Aug. 1950 and Aug.-Sept. 1951 included 179 bottom-sediment samples and detailed soundings from 35,000 miles of sea floor in the Beaufort and Chukchi Seas. Methods and analysis of samples are described; detailed discussion follows of size distribution and texture of sediments, minerals and rocks found, decomposable organic matter, cores taken, hydrogen-ion concentration and oxidation-reduction potential, and organisms found. Shelf and slope sediments are dominantly mud, with much ice-rafted sand and gravel found on the shelf. Comparisons are made with adjacent arctic regions. "The Beaufort and Chukchi seas and their deep water extensions are part of a sedimentary province which appears to extend from the Canadian Archipelago to Novaya Zemlya, off Siberia." **Copy seen:** DGS.

34052. CARSON, ALFRED JAMES, 1919- . Submarine canyons on the Arctic Slope. (Journal of geology, Nov. 1954. v. 62, no. 6, p. 605-610, illus., 2 text maps) 6 refs.

During U. S. Navy Beaufort Sea Expeditions in summer 1950 and 1951, soundings resulted in the recognition of many submarine canyons on the continental slope off northern Alaska and northwest Mackenzie District. The canyons average two to four miles in width and 200-350 fathoms (1,200-2,100 ft.) in depth, are best developed on the steepest part of the slope, and do not extend shoreward across the shelf edge. They may have originated prior to the Pleistocene as the result of stream action during emergence of the region, or through the action of turbidity currents and mudflows underwater. The latter action may be continuing at the present time.

34058. CATHCART, STANLEY HOLMAN, 1889-1953. Metalliferous lodes in southern Seward Peninsula. (U. S. Geological Survey. Mineral resources of Alaska. in 1920. Bulletin, 1922, no. 722, p. 163-261, 14 fig. incl. sketch maps, diagr.)

Presents the results of a geologic investigation by the author in 1920, of the genesis of the mineralization in southern Seward Peninsula. Lists publications (50) resulting from previous investigations, and describes the geology and mineralization of the region, covering deposits of gold, silver, lead, zinc, copper, antimony, bismuth, coal, iron, graphite, platinum, mercury, tin, and tungsten. **Copy seen:** DLC.

34059. CATHCART, STANLEY HOLMAN, 1889-1953. Mining in northwestern Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1918. Bulletin, 1920, no. 712, p. 185-98, 5 fig.)

Describes mining operations in 1918 in Seward Peninsula on gold, tin, tungsten, platinum, coal, antimony, and silver-lead bearing deposits. Notes drilling for oil at Cape Nome. Lists freight rates in Seward Peninsula. 1918 was a "most unfavorable" season, factors accounting for which are indicated. **Copy seen:** DLC.

34060. CATZ, BORIS, and others. Changes in thyroid of rats after removal

from cold. (American journal of physiology, Dec. 1954. v. 179, no. 3, p. 403-404, table) 11 refs. **Other authors:** E. Geiger, H. Thomas, and Ihsan el Rawi.

Rats exposed to cold (-3° C.) for seven days and then transferred to room temperature showed a change from hyperplasia of the thyroid to normal histology as early as in six hours.

34078. CHANG, MIN CHUEH. Description of heart beat in the rabbit embryo after being kept at 10° or 0° C. for several days. (Federation proceedings, Mar. 1954. v. 13, no. 1. pt 1, p. 25)

Ten-day-old rabbit embryos were stored at 10° or 0° C. for ten days. No contraction was noted during storage. In culture (at 39° C.) resumption of heart beat occurred after 4-8 hours. No heart beat took place after storage at 10° C. for five days; it did still occur after seven days' storage at 0° C. Rate of contraction decreased from 72-21 min. during three days in culture and various irregularities were noted.

34079. CHAPIN, THEODORE SHEP. FIELD, 1876- Auriferous gravels of the Nelchina-Susitna region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 118-30, fold. map, sketch map)

Presents results of a geologic investigation by the author in 1914, of the Nelchina-Susitna region in south-central Alaska, between the Susitna and Copper Rivers. Summarizes previous explorations and mining developments, and describes the geography and geology of the region. Mineral resources of interest were limited to gold-bearing gravels. Descriptions are given of the gold placers on several creeks. Author's bulletin on this area is *Arctic Bibliography*, No. 2970.

Copy seen: DLC.

34080. CHAPIN, THEODORE SHEP. FIELD, 1876- Lode developments in the Willow Creek district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1918. Bulletin, 1920, no. 712, p. 169-76, sketch map)

Describes mining developments in the Willow Creek gold-mining district in

south-central Alaska, in 1918, based on a visit by the author in Sept. of that year.

Copy seen: DLC.

34081. CHAPIN, THEODORE SHEP. FIELD, 1876- Lode developments in the Willow Creek district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1919. Bulletin, 1921, no. 714, p. 201-206, fold. sketch map)

Describes the mining operations in 1919 in the gold and copper deposits of the Willow Creek district in the Talkeetna Mountain region in southcentral Alaska.

Copy seen: DLC.

34082. CHAPIN, THEODORE SHEP. FIELD, 1876- Lode developments on Seward Peninsula. (In: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 397-407, sketch map, plate)

Describes the lode developments on Seward Peninsula in 1913. Only tin and tungsten were commercially extracted from bedrock. Gold, iron, and tin deposits are described. Brief discussion of the types of gold lodes.

Copy seen: DLC.

34083. CHAPIN, THEODORE SHEP. FIELD, 1876- Lode mining near Fairbanks. (In: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 321-55, 11 illus. incl. text maps, field map)

Presents results of the author's field investigation in 1913 of the lodes of the Fairbanks district in central Alaska. Mining conditions, also the general and economic geology are noted; the gold lodes and their mineralogy are described generally, and the mineralization briefly discussed. Individual descriptions are given of many lode mines and prospects. Silver-lead deposits, currently unimportant, are noted.

Copy seen: DLC.

34084. CHAPIN, THEODORE SHEP. FIELD, 1876- The McKinley Lake district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 78-80, fold. map)

Describes the developments in 1912 on the gold-bearing quartz veins on the shore of McKinley Lake (60°27' N. 145°13' W.), near Alaganik on the Copper River and Northwestern Railroad, near the mouth of the Copper River.

Copy seen: DLC.

**34085. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining developments
in southeastern Alaska. (*In: U. S. Geo-
logical Survey. Mineral resources of
Alaska in 1915. Bulletin, 1916, no. 642,
p. 73-104, fold. map, figs.*)

*Describes the gold, copper, marble,
barite, gypsum, and garnet mines and
prospects of southeastern Alaska, and
the mining developments on them in
1915.*

Copy seen: DLC.

**34086. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining developments
in the Ketchikan and Wrangell mining
districts. (*In: U. S. Geological Survey.
Mineral resources of Alaska in 1916.
Bulletin, 1918, no. 662, p. 63-75, fold.
map, sketch map*)

*Presents the lode mining developments
in 1916 in two districts in Southeast
Alaska. In the Ketchikan district, gold,
silver, copper, marble, and barite mining
operations are described. Noted also are
the discovery of lodes in which zinc
(sphalerite) appears to be the dominant
mineral, the discovery of the occurrence
of platinum and palladium in certain of
the copper deposits, and the finding of an
antimony (stibnite) lode, a mineral not
known previously to occur in this region
in commercial quantities. In the Wran-
gell district gold quartz lode mining
operations on Woewodski Island and the
mining developments on galena-sphal-
erite-pyrite lodes on the mainland are
described.*

Copy seen: DLC.

**34087. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining developments
in the Ketchikan district. (*In: U. S.
Geological Survey. Mineral resources of
Alaska in 1917. Bulletin, 1919, no. 692,
p. 85-89*)

*Describes the mining developments in
1917 at certain gold, copper, molyb-
denite, and marble deposits on Prince of
Wales Island in the Ketchikan district.
Gives table of gold, silver, and copper
production in the Ketchikan mining
district in 1915, 1916, and 1917.*

Copy seen: DLC.

**34088. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining developments
in the Matanuska coal field. (*In: U. S.
Geological Survey. Mineral resources of
Alaska in 1918. Bulletin, 1920, no. 712,
p. 131-67, maps, incl. 2 fold., fold. plate
of geologic structure sections, 2 fig.*)

*Presents the results of several weeks'
field work in 1918, by the author, in the*

Matanuska coal field in south-central
Alaska; describes the mining develop-
ments to the end of that year; and gives
new data on the structure and stratig-
raphy of the coal-bearing rocks, and the
character and persistence of the coal beds.
Descriptions are given of the geology of
the coal-bearing rocks and their structure,
and the areal distribution and character
of the coal. Mining developments and the
coal production of the coal field are dis-
cussed. Several of the mines are de-
scribed in detail.

Copy seen: DLC.

**34089. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining developments
in the Matanuska coal fields. (*In: U. S.
Geological Survey. Mineral resources of
Alaska in 1919. Bulletin, 1921, no. 714,
p. 197-99, sketch map*)

*Gives a brief statement of the mining
operations in 1919 at the Eska and Chick-
aloon mines in the Matanuska coal fields.*

Copy seen: DLC.

**34090. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining in the Fair-
banks district. (*In: U. S. Geological
Survey. Mineral resources of Alaska in
1917. Bulletin, 1919, no. 692, p. 321-27,
sketch map*)

*Describes the mining developments in
1917 on the gold, silver-lead and tungsten
lodes of the Fairbanks district in central
Alaska.*

Copy seen: DLC.

**34091. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Mining in the Hot
Springs district. (*In: U. S. Geological
Survey. Mineral resources of Alaska in
1917. Bulletin, 1919, no. 692, p. 331-35*)

*Briefly summarizes placer gold situa-
tion in the Hot Springs district in central
Alaska northwest of Fairbanks. Discusses
the occurrence, extent and source of the
tin ores and describes their occurrence
and mining operations on the various
creeks.*

Copy seen: DLC.

**34092. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . A molybdenite lode on
Healy River. (*In: U. S. Geological
Survey. Mineral resources of Alaska in
1917. Bulletin, 1919, no. 692, p. 329*)

*Describes a molybdenite-bearing quartz
vein in granite on the south slope of
Rainey Mountain on Healy River, about
160 miles southeast of Fairbanks by trail,
at an elevation of 6,000 to 6,500 ft. above
sea level.*

Copy seen: DLC.

**34093. CHAPIN, THEODORE SHEP-
FIELD, 1876-** . Placer mining in the

Yukon-Tanana region. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 357-62)

Describes mining developments in 1913, in seven gold placer districts in central Alaska: Fairbanks, Circle, Seventymile, Eagle, and Fortymile Rivers, Hotsprings, and Rampart. **Copy seen:** DLC.

34094. CHAPIN, THEODORE SHEPHERD, 1876-. Placer mining on Seward Peninsula. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 385-95)

Describes the gold dredging operations on Seward Peninsula in 1913, and gives a list of the dredges. Dredging, hydraulicking, and sluicing operations in the various gold regions are treated in detail. Dredging for tin on Buck Creek, in the York district, was carried on for a few weeks. **Copy seen:** DLC.

34095. CHAPIN, THEODORE SHEPHERD, 1876-. Platinum-bearing auriferous gravels of Chistochina River. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 137-41, fig.)

Describes the occurrence of gold and platinum in the Tertiary conglomerate, the bench gravels, and the stream gravels on State Creek, a headwater tributary of Chistochina River, in the upper Copper River basin, on the south side of the Alaska Range in south-central Alaska. A description of the mining operations in the district in 1917 is also given. **Copy seen:** DLC.

34096. CHAPIN, THEODORE SHEPHERD, 1876-. Tin deposits of the Ruby district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1917, Bulletin, 1919, no. 692, p. 337)

Contains results of a hasty reconnaissance by the author in 1917 to determine the possibility of the production of tin in the Ruby district in west-central Alaska. The tin ore (cassiterite) is so disseminated in the gravels that even the shallowest placers cannot be worked profitably for tin alone. **Copy seen:** DLC.

CHAPMAN, DOUGLAS GEORGE, 1920-, see Kenyon, K. W., and others. A population study of the Alaska fur-seal herd. 1954. No. 35562.

34097. CHAPMAN, FRANK MICHLER, 1864-1945. List of additions to the

North American avifauna and of eliminations and changes in nomenclature proposed since the publication of the A. O. U. check list. (Auk, 1888, v. 5, no. 4, p. 393-402)

Contains a list of 69 species and subspecies added to the North American avifauna (new species, "revived" or recorded as N. American) since 1886; at least six species native to northern and southeastern Alaska, Canada and Commander Islands are included. **Copy seen:** DSI; MH-Z.

34098. CHAPMAN, FRANK MICHLER, 1864-1945. Notes on the plumage of North American birds; forty-third paper. (Bird-lore, Mar.-Apr. 1917. v. 19, no. 2, p. 86-87, front.)

Contains an annotated list of six species of birds, with data on variation and plumages. The Kodiak winter wren (*Nannus hiemalis helleri*) from Kodiak Island, Alaska wren (*Nannus alascensis*) native to Alaska, and the Aleutian wren (*Nannus meliger*) are included. **Copy seen:** DSI; MH-Z.

34099. CHAPMAN, FRANK MICHLER, 1864-1945. On a collection of birds made by Mr. Clark P. Streater in British Columbia, with field notes by the collector. (American Museum of Natural History, New York. Bulletin 1890-91, pub. Sept. 1890. v. 3, no. 1, p. 123-58)

Birds listed include *Dryobates villosus* var. *harrisi* (Harris's woodpecker) and *D. pubescens* var. *gairdneri* (Gairdner's woodpecker) (p. 137-38) with specimens from Alaska. **Copy seen:** DLC; MH-Z.

34100. CHAPMAN, Mrs. JOHN W. Bird-neighbors at Anvik, Alaska. (Bird-lore, Nov.-Dec. 1932. v. 34, no. 6, p. 373-79, illus.)

Contains informal notes on various local species, such as the snow bunting, ducks, geese, Alaska ptarmigan, etc. **Copy seen:** DSI; MH-Z.

34101. CHAPMAN, ROBERT MILLS, 1918-, and R. H. SAUNDERS. The Kathleen-Margaret (K-M) copper prospect on the upper Maclaren River, Alaska. Washington, D. C., 1954. 5 p. 2 text maps, table. (U. S. Geological Survey. Circular 332) 4 refs.

Copper-bearing outcrops of this prospect and adjacent areas (63°17' N. 146°35' W.), about 25 miles south of Mt. Hayes in the Alaska Range, were ex-

amed by the authors Aug. 11-14, 1953. Physical features, general geology, and mineral deposits of the region are briefly described. A 10.5 ft. thick bornite-chalcocopyrite-quartz vein on Discovery Creek appears to be minable. Ore samples from the richest part of the vein average 30-45 percent copper; other samples ranged from 3.5-12.5 percent copper. Further exploration in the Discovery Creek area and on the westward extension of an outcrop belt of basaltic lavas is recommended.

34102. CHARD, CHESTER, S., 1915- . The Kamehadal; a synthetic sketch. (Kroeber Anthropological Society. Papers, 1953. no. 8, p. 20-44) 24 refs. "This is one chapter of the writer's larger work 'Kamehadal culture and its relationships in the Old and New World'." Ph. D. dissertation, Univ. of California.

Contains an outline of Kamehadal (Itel'men) culture during their first contact with the Russians (ca. 1740), based largely on the works of G. W. Steller and S. P. Krashenninnikov, members of Bering's Second Expedition. After some brief notes on the climate, flora and early inhabitants of Kamchatka, the following aspects are discussed: economy (fishing, plant-gathering, hunting and sealing); cookery; housing and clothing; tools; dog-breeding and dog sleds; boats; social and political organization; weapons and war; art and entertainments; courting, marriage, family life and upbringing of children; work distribution between men and women; medicine and medicinal plants; treatment of the dead; beliefs, animal ceremonialism, etc. Shamanism was little developed. The Kamehadal was evidently of mixed origins, results of various outside influences, "but also shaped to some extent by environment and ecology. Absence of features expectable in the area, plus peculiar local developments give it an individual stamp." *Copy seen:* DLC.

34103. CHARD, CHESTER S., 1915- . Racial types in northeastern Asia. (Kroe-

ber Anthropological Society. Papers, 1954. no. 10, p. 1-4) 2 refs.

Contains a detailed summary and discussion of G. F. Debeff's anthropological investigations in Kamchatka (cf. *Arctic Bibliography*, No. 21378). The main groups of living peoples in northeast Asia are noted; the Arctic group and its local types, including Bering Sea Eskimos, Kamchatkans (Reindeer Chukchis and Koryaks) Itel'men and Aleuts, form the center of attention and are discussed in greatest detail.

34104. CHARLES, J. L. Location and construction of C. N. R.'s extension from Sherridon to Lynn Lake. (Engineering journal, Oct. 1954. v. 37, no. 10, p. 1246-49, 2 illus., text map)

Reconnaissance for the 144-mile railroad in northern Manitoba, was begun in Feb. 1951, after a nickel-copper ore body was discovered at Lynn Lake (56° 51' N. 101° 03' W.). The location survey, soil, muskeg, and permafrost problems, winter haul of equipment and supplies in 1951-52, bridging the Churchill River, track-laying, and ballasting are briefly described. Actual grading began Sept. 29, 1951, and the first revenue carload of freight was delivered to Lynn Lake Oct. 26, 1953.

34105. CHARLEWOOD, GEOFFREY H., 1909- . Geology of the Lynn Lake area. (Western miner, June 1954. v. 27, no. 6, p. 48-51, text map) 12 refs.

Contains results of surveys by the Manitoba Mines Branch in summers 1946-1950 in the Lynn Lake region (56° 51' N. 101° 03' W.). Four main rock groups are recognized (oldest to youngest): volcanic and sedimentary Wasekwan series; sedimentary Sickle series; intrusive rocks ranging from gabbro to granite; Kisseynew-type gneiss. Rocks in each of these series are described in some detail and the known structure is outlined. The Lynn Lake nickel-copper ore bodies found to date occur in two of several basic intrusives in the area. Two ore bodies have been brought into production and present

reserves are in excess of 14 million tons, containing 1.223 percent nickel and 0.618 percent copper. Other mineral occurrences in the region and future exploratory work are noted.

34107. CHATFIELD, PAUL OAKES, 1909-, and C. P. LYMAN. Effects of temperature on the ventral caudal nerve of the rat. (American journal of physiology, May 1954. v. 177, no. 2, p. 183-86, illus.) 9 refs.

On cooling this nerve *in vitro*, the amplitude of the compound action potential first increased and then declined, until conduction block occurred. Excitability and conduction velocity decreased linearly with temperature, and the strength-duration curve shifted upward. After exposing the rats for weeks to cold (5°) or warm (35°) environment, the reaction of the nerves to cooling could not be correlated with these environmental temperatures. On the other hand, the caudal nerves continued to conduct at temperatures where the tibial nerve ceased conducting.

"A study was made of the factors controlling the distribution of magnesium in the calcareous skeletons of marine

organisms. The mineralogy of the carbonate appears to be the most important influence . . . The complexity of the organisms and the temperature of the water in which they lived are also controlling factors in the amount of magnesium present. A large part of the study, both mineralogical and chemical, was made with X-ray diffraction techniques."—*Author's abstract*. Analyses include organisms from several Alaskan localities: Point Barrow, Adak Island (Aleutians), Pribilof Islands, and Bering Sea.

no. 25, p. 447-51, tables) 22 refs. Text in Russian. **Title tr.:** Yakut popular medicine.

Contains demographic data on Yakuts, notes on their food and dwellings, self-protection against parasites, etc. Vital statistics with breakdown of diseases are given for 1900-1911: highest mortality is from smallpox, TB, grippe, malaria, and syphilis; ten percent of the Yakut population were suffering from venereal and skin diseases. Lack of medical personnel and institutions foster self-help. Shamanistic activities, medications used, medicinal plants, use of mineral waters and hot springs and popular therapy for specific ailments (including leprosy) are described. Arctic hysteria termed "Yakutian disease," and distinguished in two types, *émiurik* and *menerik*, is noted. In case of epidemic, Yakuts make an offering to the goddess of epidemics (*Sordakh-Chonakh*), then hastily leave the place. Healing of domestic animals is also treated.

Brief biographical sketch of the arctic explorer, Vladimir Aleksandrovich Rusanov (1875-1913), and description of his five voyages to Novaya Zemlya (1907-1911) by which he succeeded in circumnavigating both islands. His last voyage on the *Gerkules* (1912-1913) is noted: to Spitsbergen thence eastward to Kara Sea in a fateful attempt to navigate the Northern Sea Route. Traces of the expedition found on unnamed islands off the western coast of Taymyr (1934-35), on Popova-Chukchina Island (1936) and on Bol'shevik Island (1947, not yet finally identified) are commented upon. The probability that Rusanov was the first to discover Severnaya Zemlya is stressed.

34117. CHERNETSOV, VALERIĬ NIKOLAEVICH, 1905- . Bronza Ust' Poluiskogo vremeni. (*In his and others: Drevniiâ istoriâ nizhnego Priob'ia*, pub. in *Materialy i issledovaniâ po arkheologii SSSR*, 1953. no. 35, p. 121-78, 24 p. of illus.) about 50 refs. Text in Russian. **Title tr.:** Bronze of the Ust'-Poluy time.

Contains a study of objects of bronze and copper, excavated at Ust'-Poluy (3 km. north of Salekhard) by V. S. Adrianov in 1935-1936. A basic analysis of forms, attempts at chronological dating, and comparison with objects found in the neighboring districts are given. Artifacts analyzed (more than 200 illus.) comprise implements and weapons, metal details of clothing and objects of adornment, plaques and pendants, figures of birds, animals and men, masks, kettles and other vessels, casting moulds and stamps of clay, etc. Comparison is made with other objects found in the basin of Severnaya Sosva, near Berezovo and in several more southerly localities: at the mouth of the Tara River ("Murlinskiy treasure"), on the middle Loz'va ("Loz'-vinskiy treasure"), in the Irtysh basin ("Istâfskiy treasure"), and others. Style, origin, religio-magic significance of idol-like figures, relations with recent Ostyak-Vogul art objects and implements are considered.

34119. CHERNETSOV, VALERIĬ NIKOLAEVICH, 1905- . Drevniiâ istoriâ nizhnego Priob'ia. (*In his and others' work of the same title, pub. in Materialy i issledovaniâ po arkheologii SSSR*, 1953. no. 35, p. 7-71, 25 illus., text map, fold. table, col. plate) about 50 refs. Text in Russian. **Title tr.:** Ancient history of the lower Ob' region.

Contains a review of archeological investigations and discoveries over a wide area of western Siberia from the Yamal Peninsula and Ostyak-Vogul National District to the Altay Mts. and northern Kazakhstan, with attention focused, however, on the basins of the Ob' and Irtysh. Successive chapters deal with the neolithic on the lower Ob' (about 57°-67° N., 60°-75° E.), the eneolithic and bronze ages of the same region with special attention to ceramics, and the period of the early iron age. A comparison is made (table 20) of neolithic, eneolithic and bronze objects, dated from 4,000 to 2,000 B. C. and found in four different regions: Ural, western Siberia (Ob'-Irtysh forest region), Kazakhstan and eastern Siberia (Pribaykal'ye). **Copy seen:** DLC.

34120. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Drevniia primorskaiia kul'tura na poluostrove Iamal. (Sovetskaiia etnografiia, 1935, no. 4-5, p. 109-133, 10 illus. incl. text maps, 3 plates) 10 refs. Text in Russian. **Title tr.:** An ancient maritime culture on the Yamal Peninsula.

Contains report and evaluation of archeologic field work carried out by the writer in 1928-1929 under the auspices of the Committee of the North. Excavations were made in three localities on the tip of the Yamal Peninsula, between 71°21'-72°53' N. 67°30'-71°40' E., all three on the sea shore and belonging to different periods. The oldest site may be dated about 1000 A. D., and the youngest about the beginning of the 18th century. Objects of bone, horn, stone, bronze, copper and iron were found, also piles of animal skulls and other bones apparently religious in purpose. It was a population of sea hunters, not Samoyeds or Ugrians, living chiefly from walrus and seal hunting; their shelter was earth huts, with whale bones used in the structure; their skin boats and harpoons were similar to those of the Eskimos. The culture of this maritime people has many affinities with that of Paleo-Siberians, the Eskimos and Chukchis; some similarities with the Thule culture are suggested. **Copy seen:** DLC.

34121. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . K voprosu o proniknovenii vostochnogo serebra v Priob'e. (Akademiia nauk SSSR. Institut etnografii. Trudy, 1947. nov. seriia, t. 1, p. 113-34, 5 illus.) 20 refs. Text in Russian. **Title tr.:** The penetration of oriental silver into the Ob' region.

Contains an investigation of recent Ostyak and Vogul ritual vessels made of silver, bronze and tin, also archeological specimens found at the Ust'-Poluy site, near Berezovo, and on Kulayke Hill (Narym District). The form of these vessels represents the sun and moon; metal plaques, figurines and engravings, representing the eagle-like mythical bird *kars* are noted particularly. The cult of the eagle is traced among other Ural-Altaic peoples and connected with Hindu-Iranian mythology. Two Vogul(?) legends, one on a silver dish, the other on the winged *kars*, are given. It is concluded that the metal vessels were not made in the North, but brought from

Iran and Chorasmia (Khiva) by merchants who came as far as Berezovo to trade for furs and ivory. Kettles and vessels of non-ferrous metals reached the lower Ob' around 500 B. C., and at the same time a new ethnic group, the Ugrians, came to northwestern Siberia from the south, bringing a steppe culture of Scytho-Sarmatian type. Several Hindu-Iranian elements may be traced in Vogul and Ostyak languages, folklore and customs, e. g. terms for iron, domestic animals and weapons (several etymologies are given), dramatic performances at the bear festival, the myth of *kars*, etc. **Copy seen:** DLC.

34122. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Opyt tipologii zapadosibirskikh kel'tov. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1947. vyp. 16, p. 65-78, 4 illus.) 12 refs. Text in Russian. **Title tr.:** Contribution to the typology of West Siberian celts.

Contains a characterization and classification of bronze celts (ax-shaped implements). Description of several specimens is given with analysis of their form and ornamentation. A bronze celt found at Ust'-Poluy is attributed to the fourth, or the latest (and last) group which is dated 400 B. C. to 100 A. D. Affinities in form and ornamentation between bronze objects of northern China and those of Ob' Ugrians are stated. **Copy seen:** DLC.

34123. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Osnovnye etapy istorii Priob'ia ot drevnelshikh vremen do X v. n. e. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1946. vyp. 13, p. 153-56) Text in Russian. **Title tr.:** Principal stages in the history of the Ob' region from the earliest times to the tenth century.

Summary of dissertation for candidate degree, presented to the Dept. of History at the Moscow State University in 1942. The sequence of archeologic cultures and movements of tribes in the region is outlined. The middle and lower Ob' basin was already inhabited in the neolithic and eneolithic, or about 1000 B. C., by hunters and fishers living in large (300-600 sq. m.) earth huts. The shores of the Yamal Peninsula and the territory beyond, to the mouth of the Khatanga River in the east, and to

Kanin Nos in the west, including Bol'shezemel'skaya and Malozemel'skaya Tundra, were inhabited around 500 B. C. by bearers of the "arctic neolithic." They were sea hunters, of unknown ethnic origin, though their maritime culture has much in common with that of the Paleo-Siberians. Shortly after 500 B. C. bearers of a different, the so-called Ust'-Poluy, culture came from the south and settled in the districts of Salekhard and Berezovo. About A. D. 500 Voguls and Ostyaks were firmly established on the middle and lower Ob'; the origin of their names, "khan'të" and "man'si," is discussed. Around A. D. 1000 the nomadic Samoyeds came from the southeast; they partly assimilated the ancient arctic sea hunters and Ugrians, and brought to them the technique of reindeer breeding.

34124. CHERNETSOV, VALERIĬ NIKOLAEVICH, 1905- . Ust'-Poluiskoe vremâ v Priob'e. (In: Chernetsov, V. N., and others, Drevniâ istoriâ nizhnego Priob'â, pub. in Materialy i issledovaniâ po arkheologii SSSR, 1953. no. 35, p. 221-41, 3 illus.) 40 refs. Text in Russian. *Title tr.:* Ust'-Poluy time in the Ob' region.

Contains a synthesis of archeologic investigations of a culture represented by prehistoric sites, tumulus and sacrificial places, discovered at several points on the lower Ob': near Salekhard, at Angel'skiy Mys where the Arctic Circle crosses the Ob', and up to the mouth of the Irtysh, in the Severnaya Sosva, Loz'va and perhaps the Konda basins. Bronze artifacts and objects of art, also ceramics of this so-called Ust'-Poluy culture are analyzed and dated from 400 to 200 A. D. It is derived from the Potchevash culture, discovered at Potchevash or Mys Chuvashskiy near Tobol'sk and dated about 500 B. C. (cf. No. 36355). It belonged to members of a single ethnic group, of which the Finno-Ugrians, Ostyaks and Samoyeds are specifically mentioned.

Hypertrophie de certains organes essentiels pendant l'augmentation du metabolisme qui accompagne l'acclimatation au froid; consequence touchant la plasticite et renouvellement de ces organes. (Annales de physiologie et de physiochimie biologique, 1939. v. 15, p. 411-31, illus. tables) 6 refs. Text in French. **Title tr.:** Hypertrophy of certain essential organs during the increase of metabolism which accompanies acclimatization to cold; consequences pertaining to the plasticity and regeneration of these organs.

Rabbits of different races and white mice showed, after prolonged exposure to

cold environment, an increase in the weight of the liver; this increase was slower than the increase of metabolism. Similarly the heart, lungs and kidneys increased in mass, the increase varying in different organs and races. In all cases this increase was due to a rise in the basic cellular components; the relative concentration of water, inorganic substances, protein, fat, glucides changed but little. The significance of the phenomenon is discussed.

Brief account of the expedition, which left Yakutsk towards the end of 1928 in two parties, one travelling via Verkhoyansk, the other via Oymyakon; they joined in Apr. 1929 at the Moma River mouth, built vessels and sailed down the Indigirka to Russkoye Ust'ye, where they wintered. In 1930, the expedition continued the work of surveying and mapping the river and its mouth and made side trips. The Indigirka River was found navigable up to Mayor-Krest (67°45' N. 145°02' E.) but the delta presented difficulties; several hitherto unknown villages were found, and an unknown mountain range (Ilin'-Tas) was discovered; geological, magnetic, botanical and zoological observations were carried out, and zoological and ethnographic materials collected.

Contains an account of a mass Pirquet test conducted largely among children, with information on the population of

the area, methods and analysis of results. The latter are compared with earlier findings for the area.

Copy seen: DSG.

34143. CHRISTENSEN, N. O. 1917- . Some features of the history of the Greenland Administration. (*Arctic circular*, Jan. 1954. v. 7, no. 1, p. 1-8)

Paper presented Oct. 1, 1952 to the Arctic Circle in Ottawa by the Deputy Governor in Greenland. Early Danish administration and conditions of the Greenlanders prior to 1855 are outlined. The work of Dr. H. G. Rink, "Inspector" in South Greenland from 1855, the establishment of local committees in West Greenland in which Greenlanders took part for the first time, and economic conditions in the late 19th century are discussed. In the early 20th century the Danes took increasing interest in Greenland government. In 1908, municipal and two provincial (North and South Greenland) councils, supplemented in 1925 by district councils, were set up in place of the local committees and functioned until 1950. Economic conditions and developments after World War II are briefly discussed. In 1953 the Danish Constitution became operative for Greenland.

Contains brief summary of history of Fort Reliance (62°43' N. 109°69' W.), first established by Capt. George Back in 1833 as winter quarters for his expedition. Present site of the Fort Reliance Detachment, RCMP, is on the west end of Fairchild Point on McLeod Bay, Great Slave Lake, about 180 air miles east of Yellowknife. Construction of the base by a four-man RCMP party in July-Aug. 1927 is described. In 1948 the Canadian Dept of National Defence erected a radio station. Trapping was the main occupation in the area until recent years. Much prospecting is now carried on.

34161. CLARK, JOHN GRAHAME DOUGLAS. New World origins. (Antiquity, June 1940. v. 14, no. 54, p. 117-37, 3 illus., text map) 50 refs.

Review of contributions in the fields of anthropology, archeology and geology (particularly Clark Wissler's) to the question of the origin of the New World population and culture. The latter is characterized as an economy based on hunting and food-gathering, ability to flake stone, to use clubs, harpoons, spears (or darts) and spear-throwers, on knowledge of basketry, cord-twisting and netting, also on use of wooden, bark and skin vessels. The first inhabitants of America had no knowledge of the practice of metallurgy, pottery, agriculture or domestication of animals, except the dog. The cultures of Folsom and Yuma, their character and age are discussed. Evidence (and lack of it) on the advent

of man in the New World and his migration route are noted. The recent archeological discoveries of a mesolithic culture on the shores of Lake Baykal, in the Irkutsk region, and on the Yenisey near Krasnoyarsk are cited. It may be considered to a certain point, as the source of proto-American culture.

Describes use of the Bumstead sun compass, drift indicator, and bubble sextant on Byrd's flight from Vestspitsbergen to the North Pole and return May 9, 1926.

Copy seen: DLC.

34167. CLARKE, ROBERT. Whaling and the stocks of whales. (Advancement of science, London, Dec. 1954. v. 11, no. 43, p. 305-311)

Contains paper delivered to the Oxford Meeting of the British Association for the Advancement of Science, Sept. 1-8, 1954. Statistics for 1952 on production of whale oil and whale by-products are presented. Modern whaling since the 1860's is traced, with emphasis on the early whaling operations from South Georgia in the Antarctic and the rise of pelagic whaling (factory ships) prior to World War II. Conditions which led to whaling regulations of the 1930's and to the formation of the International Whaling Commission after the war are discussed. The schedule and achievements of the Commission are noted. Modern whaling methods, types of whales caught, efforts of whaling companies to overcome wastage on the factory ships, and success of present whaling regulations are described.

34168. CLARKSON, EDWARD H. The habitat and distribution of the broad-leaf spinulose ferns. (American fern journal, Oct.-Dec. 1928. v. 18, no. 4, p. 120-24)

Includes *Dryopteris dilatata* var. *americana*, occurring in Lapland and northern Norway in Europe; Kamchatka in Asia; Sitka, Kodiak Island, southern Alaska, Labrador and Greenland, in North America. **Copy seen:** DLC; MH-G.

34169. CLARKSON, L. S. Evidence for a stratospheric circulation in vertical meridional planes between polar and equatorial regions in winter. (Meteorological magazine, London, Nov. 1951. v. 80, no. 953, p. 309-318, illus.) 23 refs.

Contains discussion of "recent cross sections from Arctic to Antarctica. Tropopause at equator is lower and warmer in July than Jan. In Antarctica, troposphere is much colder than in Arctic, especially in summer. As causes, greater extent of oceans and greater cloudiness are inadequate, and transport of ozone is adopted as main cause. This leads to a unified scheme of stratospheric circulation, consisting of a descent at equator, flow in lower stratosphere from equator to pole, ascent at pole and return flow at greater heights. In winter this circulation is stronger in the Southern than in Northern Hemisphere."—*Meteorological abstracts & bibliography*, Apr. 1954. v. 5, no. 4, p. 535-36.

Copy seen: DLC.

34170. CLAUSE, MEL. Future looks good for Finnish airline. (Aviation age, Feb., 1954. v. 21, no. 2, p. 128-33, illus. map)

Contains description of operations of Finland's major airline Aero Oy, including a brief history of its growth, maintenance problems, and equipment. About 50 percent of all landing approaches in Finland are on instruments due to the frequency of bad flying weather. Runway construction is limited to about four months since the ground is frozen for the rest of the year.

34171. COACHMAN, LAWRENCE K. River flow and winter hydrographic structure of the Hamilton Inlet-Lake Melville estuary of Labrador. [Hanover, N. H., Dartmouth College], Oct. 1953. 19 p. text map, graphs, 3 tables. Mimeographed. (Blue Dolphin Labrador Expeditions) 4 refs.

Field investigations were made in Mar. 1953 during the winter project of the *Blue Dolphin* Labrador Expedition under D. C. Nutt. The work covered: (1) river flow studies of the Hamilton, North West, Kenamu, and Goose Bay Rivers; and (2) description and analysis of the basic winter structure of the Lake Melville - Hamilton Inlet estuary. Methods are described. "Fresh water inflow to the Hamilton Inlet - Lake Melville estuary varies considerably with the season. Winter flow is about 20,000-25,000 C. F. S. and summer flow about 125,000-150,000 C. F. S. Spring freshet, occurring in late May, is nearly 500,000 C. F. S. The source fresh water, entering the western end of the estuary, is close to 0° C. The source salt water is true Arctic water from the Labrador Current. Reduced fresh water inflow in winter is noted by salting of the surface layers. A stable density gradient is observed in the estuary in winter. The basic process of exchange remains the same throughout the year."—From author's abstract.

34172. COALE, HENRY K. The present status of the trumpeter swan, *Olor buccinator*. (Auk, Jan. 1915. v. 32, no. 1, p. 82-90, plates 7-10)

Contains a summary of records in scientific literature and data on specimens in zoological institutions. "A specimen of this little known swan is noted by Dall as having been secured with its nest and eggs at Fort Yukon by Mr. Lockhart, thus rendering it an Alaskan species." (p. 86). Copy seen: DSI; MH-Z.

34173. COBB, EDWARD HUNTINGTON, 1916- Coal investigations in the Homer district, Kenai coal field, Alaska, in 1950 and 1951. Washington, D. C., 1952. 19 p. 4 maps (3 fold.), fold. sections, 2 tables. Mimeographed. (U. S. Geological Survey. Reports, open file series, no. 165) 9 refs.

Contains results of ground and aerial reconnaissance, and detailed measurement, tracing and sampling of coal beds, by the writer and F. J. Markewicz, Aug. 13-Sept. 6, 1950 and May 10-Aug. 30, 1951, in the region 59°45'-60°25' N. 150°40'-151°45' W. Brief geographical description of this region is given. Bedrock ranges from pre-Tertiary (possibly late Cretaceous) to Eocene, the latter including the coal-bearing Kenai formation. Unconsolidated Quaternary deposits mantle the bedrock to the base of the Kenai Mts. with a thickness of a few inches to several hundred feet. The structure is characterized by gentle folds. Coal beds and reserves are described, and tables give analyses of coal samples and an estimate of reserves by townships. Total reserves are estimated at 64,303,000 tons.

Contains general data on bathypelagic nemerteans and on dispersal of the species by ocean currents; a list of species with known geographic distribution; classification and keys to families, genera and species, followed by descriptions of such inhabiting the Pacific; of the 29 species, ten are described as new. *Crassonemertes robusta* (Southeast Alaska waters), *Armaneria pellucida* (Sea of Okhotsk) and *Pelagoneurites brinkmanni* (Bering Sea) are included.

Copy seen: DLC; MH-Z.

COHEN, ARTHUR I., *see* Masoro, E. J., and others. Effect of exposure to cold . . . acetate utilization. 1954. No. 36145.

34178. COHEN, DANIEL M. Age and growth studies on two species of whitefish from Point Barrow, Alaska. (Stanford ichthyological bulletin, Aug. 16, 1954, v. 4, no. 3, p. 168-87, 8 illus., 7 graphs, 6 tables) 19 refs.

In summer 1952, *Coregonus nasus kennicottii* and *C. sardinella* (Valenciennes) were taken from a fresh-water lake six miles south of the Arctic Research Laboratory, the latter species also from a brackish inlet nearby. This is the first age and growth study of fresh-water species made in the Alaskan Arctic. Methods of capture and measurement are noted, spawning and hatching period, age frequency and sex ratio, body length and scale-length relationship, and growth rates are described for both species. Population differences between lake and inlet, indicated by scale differences,

are discussed for *C. sardinella*. Studies showed the whitefish population to be small and slow-growing. A major commercial fishery seems unlikely.

34183. COLE, GEORGE EDWARDS, 1879- . New nickel mine in production. (Western miner, Nov. 1953. v. 26, no. 11, p. 117-21, 4 illus.)

Nickel-bearing sulfides were found at Lynn Lake, northern Manitoba (56°51' N. 101°03' W.), in 1941. Exploratory drilling by Sherritt Gordon Mines Ltd. outlined 11 orebodies estimated to contain 14,055,000 tons, averaging 1.223 percent nickel and 0.618 percent copper. Building of the 144-mile railway from Sherridon to Lynn Lake and transfer of buildings from the Sherridon townsite took place during 1951-1953. Mining and construction developments at Lynn Lake are described. An annual output of 17 million pounds of nickel, nine million pounds of copper, 300,000 pounds of cobalt, and 70,000 tons of fertilizer is expected. First metal deliveries will be made in 1954.

Coppy seen: DGS.

34184. COLE, GEORGE EDWARDS, 1879- . New nickel production in July. (Western miner, June 1954. v. 27, no. 6, p. 52-54, 2 illus.)

During 1953 the two Sherritt Gordon mines at Lynn Lake, northern Manitoba (56°51' N. 101°03' W.), were prepared for full production, the first concentrates being loaded Nov. 9, 1953. Underground mining developments, surface construction, milling, winter freighting, employees, housing, pilot plant operation, and construction of the Fort

Saskatchewan refinery are described. Nickel production at the refinery should start July 1954. The company's financial program is discussed.

Coppy seen: DGS.

34185. COLE, GEORGE EDWARDS, 1879- . A nickel-copper deposit on the rim of the Arctic. (Western miner, Dec. 1953. v. 26, no. 12, p. 38-40, 3 illus.)

The nickel-copper orebody was discovered at Rankin Inlet (62°45' N. 92° W.) on the northwest coast of Hudson Bay in 1928. Exploratory drilling was undertaken in 1930, after which the property remained idle until 1951. The area is underlain by granite and granite gneiss, with smaller areas of volcanic and sedimentary rocks, all of Precambrian age. The ore (estimated at 435,000 tons averaging 3.29 percent nickel) is associated with a pyroxenite sill and consists of pyrrhotite with minor chalcopyrite and traces of pyrite. Drilling and construction since 1951 and transport and unloading of equipment and supplies at the site are described. *Coppy seen:* DGS.

34186. COLE, GEORGE EDWARDS, 1879- . North Rankin Nickel development. (Western miner, July 1954. v. 27, no. 7, p. 49-50)

Contains percentages of nickel and copper in the ore encountered at various points in the underground development of North Rankin Nickel Mines property at Rankin Inlet (62°45' N. 92° W.) Keewatin District. Status of mining and milling operations at the Sherritt Gordon nickel-copper mines at Lynn Lake, northern Manitoba (56°51' N. 101°03' W.) is also discussed. *Coppy seen:* DGS.

34187. COLE, GEORGE EDWARDS, 1879- . Sherritt Gordon nickel output. (Western miner, Dec. 1954. v. 27, no. 12, p. 43-44, 2 illus.)

Ore treated at the Lynn Lake, Man. (56°51' N. 101°03' W.) mill amounted to 2000 tons a day, and nickel produced at the Fort Saskatchewan, Alta., refinery was 20 tons daily in Oct. 1954. Community facilities at Lynn Lake (churches, hotel, stores, school, theater, etc.) are noted, with two photographs of the town. *Coppy seen:* DGS.

34188. COLE, LEON J. Behavior of northern phalarope with young. (Condor, Jan.-Feb. 1943. v. 45, no. 1, p. 39)

Contains observation, made on St.

Paul Island, July 12, 1941; this bird breeds regularly in small numbers on the Pribilof Islands.

Copy seen: DLC; MH-Z.

34189. COLHOUN, E. H. Temperature acclimatization in insects. (*Nature*, Mar. 27, 1954. v. 173, no. 4404, p. 582, illus.) 2 refs.

Contains an advance note on cold acclimatization studies in the German cockroach. Insects kept at lower temperature (15° C.) remained active at low temperatures at which others, kept at 25° C. or 35°, were immobilized. Acclimatized cockroaches also survived longer at low temperatures.

Copy seen: DLC.

34190. COLIN, ROBERT I. "Polar-tomic" navigation for world air routes. (Air transport, Mar. 1948. v. 6, no. 3, p. 28-32, 4 fig.)

Description of author's conception of a system of polar radio stations of 6,000- to 12,000-mile range to serve aircraft with direct reading latitude-longitude indicators. Loran lines of position are equivalent to latitude parallels and Navaglobe position lines are equal to longitude meridians in the Polatomic system. Very low frequencies and very narrow bandwidths are indicated, with only four stations with 3,000 kilowatt transmitters each, utilizing atomic piles for their power supply. Results of a quantitative investigation of the fundamental requirements for radio navigation aids capable of reliable transoceanic and polar region operation are discussed.

34193. COLLINDER, BJÖRN, 1894- Indo-uralisches Sprachgut; die Urverwandschaft zwischen der indoeuropäischen und der uralischen (finnischugrisch-samojedischen) Sprachfamilie. Uppsala, 1934. 92 p. (Uppsala. Universitet. Årsskrift. Filosofi, språkvetenskap och historiska vetenskaper 1) About 200 refs. Text in German. *Title tr.*: Indo-Uralic linguistic possessions; the ancient relationship between the Indo-european and the Uralic (Finno-Ugric - Samoyedic) linguistic families.

A study of the affinities in morphology and vocabulary in these languages: declension, conjugation, derivation of nouns and verbs; and etymologies of some 30 words. Conclusion is drawn that some kind of relationship between Uralic and Indo-european languages is more likely than not.

Copy seen: DLC.

34194. COLLINDER, BJÖRN, 1894- The Lappish dialect of Jukkasjärvi; a morphological survey. Uppsala, 1949. viii, 304 p. (Humanistiska vetenskaps-samfundet i Uppsala. Skrifter, Bd. 37:3)

First Lappish grammar written in English which describes the morphology of one of the least known Lappish dialects, that spoken in the parish of Jukkasjärvi, the northernmost part of Swedish Lapland. The material was collected from about 15 native informants in 1928, 1930, and 1932, by the author, who learned to speak the dialect to the satisfaction of natives. It occupies a central position in the central group of Lappish dialects, and is the dialect on which the literary Lappish language of Norway is based. The book gives essentials of the phonology, an extensive morphological survey, paradigms (declensions and conjugations), features of dialect geography, and 19 texts, including some superstitions and popular cures.

34196. COLLINS, C. B., and others. Age determinations for some uranium deposits in the Canadian Shield. (Geological Association of Canada. Proceedings, 1952. v. 5, p. 15-41, 4 illus., 3 graphs, 2 tables) 35 refs. *Other authors:* A. H. Lang, S. C. Robinson, and R. M. Farquhar.

Contains age determinations for 52 radioactive samples. Ages were calculated from analyses of radiogenic leads extracted from uranium-bearing samples. Results constitute the first extensive investigation of the age of pitchblende deposits. Methods are described and results discussed. Regions from which samples were taken, and for which geology and mineralogy are briefly described, include: Great Bear Lake; Hottah Lake region (65°05' N. 118°36' W.), south of Great Bear Lake; Marian River region (63°04' N. 116°19' W.), north of Great Slave Lake; Stark Lake region (62°30' N. 110°30' W.), south of east arm of Great Slave Lake. Presence of radiogenic lead in galena (ordinary lead sulfide PbS) and its effect on age determinations on samples containing appreciable amounts of galena are discussed. The method of age determination is evaluated. **Copy seen:** DGS.

34197. COLLINS, C. B., and others. Isotopic constitution of radiogenic leads and the measurement of geological time.

(Geological Society of America. Bulletin, Jan. 1954. v. 65, no. 1, p. 1-22, text map, diags., graphs, 6 tables) 21 refs. *Other authors:* R. M. Farquhar and R. D. Russell.

Isotopic abundances are reported for lead extracted from one galena and 96 uranium materials, and age determination given for each sample. Experimental methods are described. Age determinations are briefly discussed for 14 regions of the world (primarily Canada) including: Eldorado Mine on Great Bear Lake; Hottah Lake region (65°05' N. 118°36' W.) south of Great Bear Lake; Stark Lake region (62°30' N. 110°30' W.) south of east arm of Great Slave Lake; Athabaska or Churchill region (west of Hudson Bay and south of Great Slave Lake to the western edge of the Canadian Shield). Orogenic belts in the Canadian Shield (Great Bear, Yellowknife, Athabaska or Churchill, Labrador, etc.) are briefly considered in light of the age determinations.

34199. COLLINS, FRANK SHIPLEY, 1848-1920. The green algae of North America. Tufts College, Mass., 1909. 79-480 p., 18 plates. (Tufts College studies, v. 2, no. 3, Scientific series, 21) Contributions from the Harpswell Laboratory no. 32, about 400 refs.

The algae are treated "with as much detail as will enable the student to recognize the species, and have some idea of their development and affinities." Besides the Chlorophyceae, the small class of the Heterocontae is included; the families Desmidiaceae and Characeae are omitted. Keys to the orders, families, genera and species are given, followed by concise descriptions of all known species from the Arctic to Panama, with reference

to the original publication, also data on North American and total distribution. Many species native to Alaska, Greenland and northern Canada are included. Two supplements were published as listed below. **Copy seen:** DLC; MH.

34200. COLLINS, FRANK SHIPLEY, 1848-1920. The green algae of North America. Supplementary paper. Tufts College, Mass., 1912. 69-109 p., 2 plates (Tufts College studies, v. 3, no. 2, Scientific series, 27) 20 refs.

Contains names and descriptions of "a not inconsiderable number of species not before known in North America," together with additional data on taxonomy and distribution of some species in the original work. Some species and varieties are described as new. An additional key to the species of *Mougeotia* and a redescription of *M. calcarea*, native to Greenland are included (p. 75-76). **Copy seen:** DLC; MH.

34201. COLLINS, FRANK SHIPLEY, 1848-1920. The green algae of North America. Second Supplementary paper. Tufts College, Mass., 1918. 106 p., 3 plates. (Tufts College studies, v. 4, no. 7, Scientific series, 37) 111 refs.

Contains names and descriptions of many species, added to the North American flora since 1912, as well as additional data on taxonomy and distribution of some species described in the original work and first supplement (*supra*). Some species and varieties are described as new, additional and revised keys are given. A redescription of *Crucigenia rectangularia*, native to Greenland and key to species of this genus (p. 47-48), also a diagnosis of *Codium dimorphum*, occurring on Alaska coast, are included.

Contains a case report of a first instance of subcutaneous fat necrosis which has resulted from clinical application of general hypothermia in a patient 4.5 months old. The cause of this syndrome in infants is also discussed.

Copy seen: DSG.

34203. COLLINS, HENRY BASCOM, 1899- . Arctic area, indigenous period. Mexico, Instituto Panamericano de Geografia e Historia, 1954. 152 p. (*Its:* Comision de Historia, Program of the History of America, no. 68)

"The purpose of the present paper is to assemble the basic data which describe and as far as possible trace the history of the aboriginal peoples of Arctic America. To accomplish this purpose and to integrate the Arctic data within the framework of a broader Program of the History of America, it seems best to give first a summary description of the two aboriginal groups in the Arctic—the Eskimos and Indians—and the cultural and physical relationships that exist between them; second, to record the existing evidence bearing on the origin of the Eskimos and northern Indians; third, to describe the prehistoric cultures in the different parts of the Arctic, their relationships one to another and to the historic cultures that succeeded them; fourth, to describe the historic cultures of each region as they existed at the time of first European contact; and fifth, to consider the changes resulting from European contact and the role of the aboriginal peoples in the subsequent history of the region."—Introd.

Pt. 1, *The Native Peoples of Arctic America* (p. 11-17) consists of five topics or "themes:" basic characteristics of the arctic population; the geographical environment and its effect on the mode of life; cultural relationships between Eskimos and Indians; linguistic affinities of Eskimo and Athapaskan; physical relationships between Eskimos and Indians.

Pt. 2, *The Old World Affinities and Origin of Eskimo Culture* (p. 46-56) cites indications of a former more widespread Eskimo population in Siberia and specific Eurasian elements in prehistoric Eskimo and pre-Eskimo culture as evidence of an Old World origin.

Pt. 3, *Archaeology of Arctic America* (p. 57-108) describes briefly the various prehistoric Eskimo cultures and the Denbigh Flint Complex, and criticizes the Ipiutak theory of the origin of Eskimo culture.

Pt. 4, *Ethnology of Arctic America* (p. 109-144) is limited to a brief sketch of the major Eskimo and arctic Indian groups, their subdivision, location and population.

Pt. 5, *The Northern Indians and Eskimos in the Post-European Period* (p. 145-52) discusses briefly the effects of European contact and the influence of native culture patterns in the post-European period.

A selected bibliography is attached to each of the 41 sections or themes which comprise this work.

Copy seen: DSI.

34204. COLLINS, HENRY BASCOM, 1899- . "Comment" on Swadesh's "Time depth of American Indian linguistic groupings." (American anthropologist, June 1954. v. 56, no. 3, p. 364-72)

Discussion of the results (for Eskimo and Aleut) of Swadesh's (q.v.) method of calculating the age and time of separation of related languages by statistical comparison of their vocabularies. Swadesh's conclusions, the author points out, are in close agreement with the evidence of archeology, dendrochronology, and radiocarbon analysis. The estimate of 3000 years as time of separation of Eskimo proper and Aleut is in agreement with radiocarbon dates of around 3000 years for early Aleutian culture on Umnak Island (see Laughlin, *Arctic Bibliography*, No. 23684, and Laughlin and Marsh, *Arctic Bibliography*, No. 23685) and 2258 years for early Old Bering Sea culture on St. Lawrence Island. Swadesh's estimate of 1000 years as time of separation of the western Eskimo language (Yupik) and the northern and eastern (Inupik) coincides closely with the archeologists' estimate of the time of the eastward movement of the Thule culture from Alaska, which is suggested as the mechanism responsible; and the very close similarity of all northern Eskimo (Inupik) dialects is explainable as result of a recent return migration of Thule peoples to northern Alaska, as previously postulated from archeological evidence. The fact that the dialect of the inland-dwelling Caribou Eskimos is Inupik, little different from those of other northern Eskimos, including Thule-derived coastal groups, casts doubt on the theory that the Caribou are remnants of a proto-Eskimo culture ancestral to all other Eskimos.

34207. COMPRESSED AIR. Water supply systems in the frigid North. (Compressed air, Oct. 1954. v. 59, no. 10, p. 295, illus.)

Contains description of systems at Flin Flon (Manitoba), Yellowknife on Great Slave Lake (Mackenzie District) and Fort Smith (Mackenzie District), 175 miles south of Yellowknife. At Flin Flon and Yellowknife, water taken from the lakes is pumped through insulated pipes, chlorinated, heated, and circulated through supply and return mains and similar house connections. Depth at which pipes are laid, temperature of water circulated, and repair of breaks in the pipe are described. All systems depend on pre-heating to maintain year-round service.

34208. CONCANNON, CHARLES C. Alaska: new chemical frontier; the call of the wild can be intriguing even to the chemical industry as it eyes Alaska's rich resources. (Chemical and engineering news, Dec. 13, 1954. v. 32, no. 50, p. 4920-21, illus.)

The author suggests development of a nitrogen industry in Alaska on the

basis of available power potential. Locations found to meet all established criteria for low-cost power were: a site on Lake Bradley (Kenai Peninsula) which might develop from 16,000 to 24,000 kilowatts at a rate under five mills; and one at Long and Crater lakes in the Port Snettisham area near Juneau, with a potential of 38,500 kilowatts also at rate of less than five mills. Each site could supply more than enough power for a 20,000 tons per year ammonium nitrate plant. Other chemical possibilities in Alaska are suggested. **Copy seen:** DLC.

34209. CONFERENCE ON COLD INJURY. 1st, *New York*, June 4-5, 1951. Transactions, edited by M. Irené Ferrer. New York, Josiah Macy Jr. Foundation, 1952. 248 p. illus., tables, maps.

Contains accounts of discussions on "fundamental aspects of cold," as listed below, preceded (p. 7-16) by an outline of the Foundation's conference program, by Frank Fremont-Smith, introductory remarks by John H. Talbott, chairman, and autobiographical statements by the participants. Then follow discussions listed in this Bibliography under the leaders' name, viz:

SHUMACKER, HARRIS B. Animal studies. p. 17-57.

CRISMON, JEFFERSON M. Animal studies. p. 58-113.

HORVATH, STEVEN M. Homeokinesis. p. 114-144.

TALBOTT, JOHN H. Hypothermia. p. 145-180.

KARK, ROBERT. Acclimatization. p. 181-235.

A note on this Conference appeared in the *Polar Record*, July 1954, v. 7, no. 48, p. 181-82. **Copy seen:** DLC.

34210. CONFERENCE ON COLD INJURY. 2nd, *New York*, Nov. 20-21, 1952. Transactions, edited by M. Irené Ferrer. New York, Josiah Macy Jr. Foundation, 1954. 242 p. 43 illus., 43 tables.

Contains account of discussions dealing with physiological and pathological effects of cold, preceded by a program outline by Frank Fremont-Smith and introductory remarks by John H. Talbott, and followed by autobiographical notes of the participants of the conference. The first three discussions are listed in this Bibliography under their leaders' names.

SCHUMAN, L. M. Epidemiology of cold injury in man. p. 11-84.

DUGAL, LOUIS-PAUL. Resistance to cold. p. 85-133.

ADAMS-RAY, JACK. Patho-physiology of cold injuries. p. 134-89.

Suggested areas of future discussion and research (p. 190-226, illus., tables, 11 refs.) This chapter is an informal group interchange, in which participants discuss needs for research in: vascular exchange of fluids; clotting and anti-coagulants; freezing and non-freezing injuries; O₂ consumption; tissue injuries; blood, etc. **Copy seen:** DLC.

34211. CONOVER, HENRY BOARDMAN, 1892- . A new race of ruffed grouse from Vancouver Island. (Condor, July-Aug. 1935. v. 37, no. 4, p. 204-206)

Among the seven subspecies used in the study and listed here with localities of specimens, is *Bonasa umbellus yukonensis* from Yukon Territory (Teslin River and Lake La Barge) and Alaska (Russian Mission).

Copy seen: DSI; MH-Z.

34212. CONOVER, HENRY BOARDMAN, 1892- . Notes on some American shorebirds. (Condor, Sept.-Oct. 1945. v. 47, no. 5, p. 211-14)

Contains an investigation of the validity of geographic races of eight American shorebirds. Descriptions of *Arenaria interpres morinella* and *Erolia alpina pacifica*, native to Alaska, are included. The study is partially based on material from Greenland, the Anadyr region, Commander Islands, and the Okhotsk seacoast.

Copy seen: DSI; MH-Z.

34213. CONOVER, HENRY BOARDMAN, 1892- . The races of the knot (*Calidris canutus*). (Condor, Nov.-Dec. 1943. v. 45, no. 6, p. 226-28)

Contains an investigation of the geographic races and their plumages, based on specimens of this bird from Europe, Asia and the Pacific coast of North America. Two races, *Calidris canutus canutus* (breeding from Greenland and Spitsbergen, east across arctic Europe and Siberia to Point Barrow, Alaska) and *C. c. rufus* (breeding in arctic Canada), are included.

Copy seen: DSI; MH-Z.

34214. CONOVER, HENRY BOARD-MAN, 1892- . The races of the solitary sandpiper. (Auk, Oct. 1944. v. 61, no. 4, p. 537-44)

Contains a study of two geographic races of *Tringa solitaria*, with notes on breeding and immature plumages. *T. s. solitaria* (breeds in northern Ontario and Labrador) and *T. s. cinnamomea* (breeds in Alaska and Canada from the limit of trees south to 60° N. lat., and from Bering Sea to the west coast of Hudson Bay), are included.

Copy seen: DSI; MH-Z.

34215. CONOVER, HENRY BOARD-MAN, 1892- . A study of the dowitchers. (Auk, July, 1941. v. 58, no. 3, p. 376-80)

Study of the geographic variation of this bird. The long-billed dowitcher, *Limnodromus scholopaceus*, breeding in the Arctic from Franklin Bay, Mackenzie District west to Point Barrow and south to Point Dall, Alaska, the inland dowitcher, *L. griseus hendersoni* from northern Manitoba and the eastern dowitcher, *L. griseus griseus*, James Bay region are included.

34216. CONSOLIDATED MINING & SMELTING COMPANY OF CANADA, LTD. The story of the Consolidated Mining and Smelting Company of Canada Limited. (Canadian mining journal, May 1954. v. 75, no. 5, p. 125-393, illus., text maps, diagrs., graphs, tables) refs.

Includes material on the Con mine (gold) on the west shore of Yellowknife Bay, Great Slave Lake (p. 187-95, 228-30). Geology, structure, ore mineralization, mining equipment and procedure are described, as well as the Con camp and its living facilities, and operation of the Con mill. Cominco's other activity on Great Slave Lake, handled by a subsidiary, is at Pine Point on the south shore, where a substantial lead-zinc orebody has been found. Geology, stratigraphy, structure, and development of the mineralized belt are briefly described (p. 206-208).

34220. COOK, FREDERICK ALBERT, 1865-1940. The possibilities of human life within the Antarctic. (The Independent, N. Y., June 1900, p. 1245-48)

Contains an analysis of possibilities of settlement or exploitation as compared with those in the Arctic. Adverse conditions such as low average temperature, continuous snow and storm, lack of trees are contrasted with the more abundant life and animal resources of the Arctic.

Copy seen: DLC.

COOK, WILLIAM HARRISON, 1903- , see Lusana, V. V., and W. H. Cook. Ice propagation. . . . II. Effect of solutes. . . . 1954. No. 35977.

34221. COOKE, WELLS WOOD-BRIDGE, 1858-1916. Distribution and migration of North American shorebirds. Washington, D. C., U. S. Govt. Print. Off., 1910. 100 p. 4 plates. (U. S. Dept. of Agriculture. Biological Survey. Bulletin No. 35).

Following introductory discussion, 76 species and nine varieties are listed with data on breeding, winter and migration ranges, and records of spring and fall migration. Several records from all parts of Alaska and northern Canada are included. Five European species occurring in "North America only in Greenland" are noted (p. 5); 24 species breeding chiefly north of the Arctic Circle are listed (p. 8), with northern limits of their distribution indicated.

Copy seen: DA; MH-Z.

34222. COOKE, WELLS WOODBRIDGE, 1858-1916. Our greatest travelers: birds that fly from Pole to Pole and shun the darkness: birds that make 2,500 miles in a single flight. (National geographic magazine, Apr. 1911. v. 22, no. 4, p. 346-65, 12 text maps)

Contains a study of the migration and routes of various migratory birds, with data on the main ones of North America (map p. 347) and discussion of migratory flights of such birds as the black-poll warbler that nests in Alaska, palm warbler nesting in Labrador and northern Canada, and others (golden plover, arctic tern (p. 358-60, map); its summer home is along the North American arctic coast and its winter home within the Antarctic Circle, eleven thousand miles away.

34226. COOLEY, RICHARD A. An economic study of Haines, Alaska. Juneau, Alaska Development Board, Oct. 1953. 100 p. illus., 2 text maps, 3 graphs, 21 tables. Mimeographed. 3 refs.

Contains survey prepared for residents of the Haines region, prospective settlers and businessmen, government agencies. Physical features of the region are briefly described, with some climatic data, and its history is outlined. The present settlements of Haines (59°14' N. 135°26' W.), Port Chilkoot, and Klukwan are described as to location, municipal administration and services, business, housing, transport, education, health, religious and cultural activities, with notes on rural settlement.

Economic possibilities are discussed in some detail: transportation problems and the Haines route; tourism; forests; agriculture; fisheries; mining, with notes on the Klukwan iron deposits and Canadian hydroelectric power plans.

Copy seen: DI.

34227. COOLEY, RICHARD A. Fairbanks, Alaska; a survey of progress. Juneau, Alaska Development Board, July 1954. 78 p. illus., text maps, graphs, tables. 49 refs.

Contains brief general survey of the physical geography and historical background of the Fairbanks region, followed by more detailed discussion (with statistical data) of: population; U. S. Government activities; business; labor and employment; the city and its problems of administration, financing, etc.; public utilities; housing; cost of living; education; University of Alaska; and cultural and recreational activities. Transportation, tourism, forests, agriculture, wildlife, water power and mining in the surrounding region are also described in some detail.

Copy seen: DI.

34228. COOMBS, DONALD BRACKIN-REED, 1921- . The Hudson Bay Lowland, a geographical study. A thesis presented to the Faculty of Graduate Studies and Research, McGill University, in partial fulfillment of the requirements for the degree Master of Arts. Montreal, Apr. 1952. 226 p. 71 illus., 17 text maps, graph, 4 tables. Typescript.

Contains a study of the coastal plain on the west side of James and Hudson Bays from the Nottaway River, Quebec, to the Churchill River, Manitoba ($49^{\circ}58'-58^{\circ}50'$ N. $75^{\circ}56'-95^{\circ}$ W.), one of the major physiographic provinces of Canada. Purpose is to provide a description of the cultural and physical aspects of the region, explain its economic status and failure to progress with other early occupied regions of Canada. Field work was carried out in summer 1947, 1949, and 1950. Geology, topography, hydrography, soils, climate, vegetation, and fauna are described. Historical development, exploration, and colonization of the region, present Indian and white population, natural resources and economic development are dealt with, also the settlements of Churchill, Moose Factory, and Moosonee, administration, and transport and communications. Conclusion is that unattractive physical

terrain, poor climate, and lack of natural resources have hindered development of the region to date. Its future seems limited to the fur trade unless pressure is exerted by expanding population to the south or new siting of industry.

34229. COOMBS, DONALD BRACKIN-REED, 1921- . The physiographic subdivision of the Hudson Bay Lowlands south of 60° north. (Geographical bulletin, 1954. no. 6, p. 1-16, 10 illus., 2 text maps) 5 refs. Summary in French.

The coastal plain on the west side of Hudson and James Bays ($49^{\circ}58'-58^{\circ}50'$ N. $75^{\circ}56'-95^{\circ}$ W.) has a total area of 125,000 sq. mi. Surface characteristics are not uniform, and the Lowland may be divided on the basis of climate, drainage, and geologic history, into four subdivisions, each described in turn: (1) dry zone, the southernmost part, 40-50 percent dry land usually heavily wooded; (2) muskeg and small lake zone (muskeg zone), the central part except for the coastal strip, covering more than 50 percent of the Lowland's total area; (3) marine clay zone, the remaining northern part except for the coastal strip; (4) coastal zone, from a few hundred yards to several miles wide along the entire length of the Lowland. This zone is characterized by wide gravel or shale beaches, and by a large number of ridges (apparently developed from offshore bars) parallel to the coastline.

34230. COPE, OLIVER B., 1916- , and others. Effects of some insecticides on trout and salmon in Alaska, with

reference to blackfly control. (American Fisheries Society. Transactions, 1947, pub. 1949. v. 77, p. 160-77, 5 tables) 10 refs. *Other authors:* C. M. Gjullin and A. Storm.

Contains results of study carried on in the Anchorage area in summer 1947 by the U. S. Dept. of Agriculture, Bureau of Entomology and Plant Quarantine. Tests were made, simultaneously in both hatchery-troughs and actual streams, of effects of some new insecticides on native fresh-water fish (trout and salmon), fish-food organisms, and blackfly larvae. Principal chemical tests were DDT, benzene hexachloride, chlordan, and chlorinated camphene. Insecticides found most promising were: DDT in acetone solution and fuel-oil solution, chlordan in acetone solution and fuel-oil solution, and toxaphene in acetone solution. Loss of blackfly larvae as fish food is not considered serious in this area.

Contains descriptions of two new genera and 74 species from various regions, among them *Scatophaga nubifera* n. sp. from Point Barrow, Northern Alaska, and *S. crinita* n. sp. native to Bering Island.

Copy seen: DLC; MH-Z.

34232. CORBEL, JEAN. Sols polygonaux et "terrasses marines" du Spitzberg. (Revue de géographie jointe au Bulletin de la Société de Géographie de Lyon et de la Région Lyonnaise, 1954. v. 29, no. 1, p. 1-28, 12 illus. on 6 plates, 2 sketch maps, diags.) 34 refs. Text in French. *Title tr.:* Polygonal soils and "marine terraces" of Spitsbergen.

The large fields of polygons in Vestspitsbergen are found principally on the limestone which forms the foundation of the "marine terraces" in the Kongsfjorden, Isfjorden, Kapp Linné, Kapp Margin, and Hornsund regions. The "marine terraces" are actually of complex origin and the materials lying upon them are continental. Various theories of polygon formation are reviewed, the different types seen in Spitsbergen are described, and on the basis of observations of polygons and freeze and thaw action,

criticisms of these theories are offered. Hypotheses are presented for the formation of various types of polygons, and the relation between formation and the underlying rock type is discussed. The most suitable terrain for formation of large polygon fields is a flat limestone surface covered with quartzite formations.

34233. CORBEL, JEAN. Les sols polygonaux; observations, expériences, genèse. (Revue de géomorphologie dynamique, 1954. année 5, p. 49-68, illus., diags., table) 15 refs. Text in French. Summary in English. *Title tr.:* Polygonal soils; observations, experiments, genesis.

"Previous theories on polygon formation are evaluated on the basis of 150 field experiments and observations in the Alps, the mountains of Scandinavia, certain Baltic islands, Lapland and Spitsbergen. Several types of polygons are described and listed according to soil type and mechanical processes involved. The separation of finer materials and the formation of patterns are explained by repeated freezing and thawing. The presence of larger masses weighing 10 kg. or more can be attributed to stone runs or earth tremors. The theory of convection currents as the cause of polygons is rejected. A briefly annotated list of the field experiments is included."—SIPRE.

34234. CORBEL, JEAN. Sols striés et éboulis ordonnés. (Révue de géomorphologie dynamique, 1954. Année 5, no. 1, p. 31-33) 3 refs. *Title tr.:* Stone stripes and bedded scree.

Contains brief discussion of two phenomena observed in Vestspitsbergen. The stone stripes are common in siliceous areas (Isfjorden region), the bedded scree in limestone regions (Kongsfjorden, Hornsund regions). Both forms are the result of freeze and thaw action in the soil; the difference in appearance seems due to lithologic differences in the materials involved. *Copy seen:* DGS.

34236. CORMIL INVENTOR AND NEW PRODUCTS DIGEST. Air mat, new inflatable fabric. (Cormil inventor and new products digest, Dec. 1954-Jan. 1955. v. 2, no. 2, p. 16-17, 2 illus., diagr.)

Contains brief description of a rubber-coated nylon fabric called "air mat", developed by Goodyear Tire and Rubber Co. Air mat is an inflatable fabric originally designed for use by the U. S. Air Force as quonset-type huts for the Arctic. The four-man shelter withstands heavy arctic ice and snow loads, and it provides vacuum weather-proofing. The material is woven, coated and fabricated as two plies of superimposed fabric with connecting nylon threads of a fixed length connecting the upper and lower plies.

34241. CORTON, EDWARD L. The ice budget of the arctic pack and its application to ice forecasting. Washington, D. C., Sept. 1954. 13 p. 2 tables. (U. S. Hydrographic Office. Technical report, TR-6) 6 refs.

"The annual cycle of the Arctic pack is considered from the viewpoint of aerial ice reconnaissance. From statistical considerations, figures are presented showing the amount of melting, amount of new ice formation, and the average age of the remaining polar ice under various assumptions. It is demonstrated that, in the polar seas, the ice forecaster must consider the composition of the pack as well as other factors because of the different physical characteristics of winter and polar ice. Future variations in pack composition may result from the present trend toward the warming of the Arctic, with resulting operational effects."—*Author's abstract.*

34242. CORTON, EDWARD L. A study of the arctic ice pack. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 375)

Contains abstract of paper presented at 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. "The annual cycle of the Arctic ice pack is considered from the viewpoint gained by aerial reconnaissance. The composition of the pack during summer months is 75 to 85 pct. polar ice, and 10 to 20 pct. winter ice. About 10 pct. of the total volume of the ice flows out of the polar basin annually. The average age of the polar ice is about nine years, but 11 pct. of it is over 20 years old. The total concentration of ice in summer is highest (98 pct.) between the North Pole, Spitzbergen, and Greenland, and the average age of the polar ice is greatest there. Between the Laptev and Beaufort Seas the summer coverage is lower (90 pct.), the percentage of winter ice higher, and the average age of the polar ice lower. Forecasting the movements of the ice pack involves consideration of the composition of the pack as well as wind and current factors, because of the different physical characteristics of winter and polar ice. If the warming of the Arctic in this century continues, the oceanographic factors should lead to complete melting of the permanent ice pack and marked changes in polar climate."

34251. COURT, ARNOLD, 1914-. Refractive temperature. (Franklin Institute. Journal, June 1949. v. 247, no. 6, p. 583-95) 34 refs.

The need for refraction corrections and their magnitude are discussed, the origins and assumptions of refraction tables in current use are explained, examples are given of errors involved in use of tables under all weather conditions, and a method is suggested for approximating the refractive temperature. An accurate computation of the refraction connection is highly essential in polar regions where strong temperature inversions, with abnormal temperature gradients, are most common even in summer. The following rules are suggested to improve computations: "The refractive temperature is the same as the actual air temperature at the time of observation, except that it should not be more than 10° F. less than the average temperature for the preceding 24 hrs., nor 25° F. less than the mean temperature of the month. It should never be less than 0° F. except in polar regions, where it may be ¼ as far below 0° F. as the actual temperature."

34255. COX J. W., and K. DAVIES. Statistical studies of polar radio blackouts. (Canadian journal of physics. Dec. 1954. v. 32, no. 12, p. 743-56, 15 fig.) 3 refs.

A statistical study of high frequency radio blackouts in Canada is made from records taken at the ionosphere sounding stations of Resolute Bay on Cornwallis Island, Baker Lake in Keewatin District, Churchill on Hudson Bay, Winnipeg, and Washington, D. C. Data over the period 1949 to 1952 were used. Both vertical incidence and communication data are examined to determine the geographical, seasonal, and diurnal distributions of the frequency of occurrence of blackout. Blackouts usually occur in the morning hours. The time of daily maximum of occurrence of blackouts is roughly a linear function of latitude; no well-defined seasonal variation common to all stations exists, and short duration blackouts appear to be localized in space.

34257. COXE, WILLIAM, 1747-1828. Account of the Russian discoveries between Asia and America. To which are added, the conquest of Siberia, and the history of the transactions and commerce between Russia and China. 4th ed., considerably enlarged. London. Cadell and Davies, 1803. xxiv, 492, [4], [493]-500 p. fold. plate, 5 maps (4 fold., incl. front.)

First pub. London 1780 (xxii, 344, [13] p.); also pub. in French 1781, German 1783, and, author states, Russian. Cox, an English cleric and historian who had traveled in Western Europe, lived for a time in Russia, presents in a connected narrative, translated excerpts from continental compilations mainly G. F. Müller, *Sammlung Russisch*, and P. S. Pallas, *Neue nordische Beyträge*.

Though much of his material is second or third hand, and his translations at times partial or misleading, Cox's work was long the most comprehensive, and on some episodes is still the most ready source of information (in English) on the 18th century Russian voyages in the Bering Sea region. This enlarged edition covers the period from 1711-1792. Following an introductory sketch of the history and fur trade of Kamchatka, Bering's first voyage is summarized and text of Steller's journal of the second voyage given with remarks (p. 30-101). Voyages to the Commander and Aleutian Islands in the post-Bering period, 1741-1778, are chronicled: those of Mikhail Nevodchikov, Adrian Tolstyykh, M. Khodilov, Petr Druzhinin, S. G. Glotov, Ivan Solov'ev (Solov'ev), Afanasii Ochereadin, P. K. Krenitsyn and M. D. Levashev, and various others. Their discoveries, encounters with natives, impressions of the latter and of the vegetation and wildlife, sufferings from scurvy, shipwreck, etc., development of trade, etc., are

recounted. Shelekhov's narrative (after Pallas) of his voyage and colony at Kodiak 1783-87, Billing's voyage (after Sauer, q. v.), and several voyages in attempt at discovery of a Northeast Passage are included.

During the 18-month period, 218 depth determinations were made while ice island T-3 moved about 1500 km., generally southeast, in the region 85°-89° N. 75°-165° W. Operations were made off the edge of the island on the ice pack. Depths nowhere exceeded 3950 meters; minimum

depth observed was 1340 meters. Most striking feature was a scarp, 500-1500 meters high, running east-west across the mapped area. Chart shows relation of depths mapped from T-3 to others in the central Arctic Basin. On May 3, 1952, when the island was 75 nautical miles from the geographical North Pole, an airplane landed at the Pole and a sounding of 4320 meters was made.

34262. CRARY, ALBERT PADDOCK, 1911-. Seismic studies on Fletcher's Ice Island, T-3. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 293-300, graphs, 2 tables) 12 refs.

Studies were carried out on the island in the Arctic Basin in June-July 1952 to determine the elastic constants and thickness, and to obtain further knowledge of the characteristics of plate waves. "Two types of seismic profiles were made, one using explosives detonated at or near the surface, and one using mechanical impacts." The types of waves produced and results obtained from each type are discussed. "The thicknesses obtained . . . are quite consistent, giving from 160 to 170 ft., corresponding to an average density of about 0.91 gms/cm, as deduced from the elevations. This value of density was also obtained by direct measurements in the upper 50 ft. of ice."

34271. CROWSNEST. Icebergs and Eskimos; "Swansea" travels to Baffin Land, Greenland, sets long distance towing record. (Crowsnest, Nov. 1949. v. 2, no. 1, p. 5-7, illus.)

Contains description of itinerary of the 6,350-mile cruise of the Royal Canadian Navy's frigate *Swansea* during Aug.-Sept. 1949 on annual outing for units of the Canadian fleet into northern waters. Stops were made at Frobisher on Baffin Island, the weather station on Padloping Island (67°05' N. 62°40' W.), Clyde Inlet (70°20' N. 68°20' W.) site of a weather and ionospheric station, Godthaab in West Greenland, and Hebron, Labrador (58°12' N. 62°38' W.). The R. C. A. F. supply vessel *Malahat*,

which had developed engine trouble in Hudson Bay, was towed 1,100 miles by the *Swansea* to Goose Bay, Labrador.

Copy seen: DLC.

34272. CROWSNEST. The mastery of the North. (Crowsnest, Oct. 1954. v. 6, no. 12, p. 6, illus.)

Contains brief account of the voyage of arctic patrol ship HMCS *Labrador*, Capt. O. C. S. Robertson in command, as the first warship to navigate the Northwest Passage. Carrying a complement of 230 officers and men and a team of scientists, the vessel left Halifax, N. S., July 24 and arrived at Esquimault B. C., Sept. 27, 1954. She made a rendezvous near the western entrance of the Passage with the two U. S. ice-breakers off the southern end of Melville Island, entered Beaufort Sea via Prince of Wales Strait, proceeded to Point Barrow and Icy Cape (Alaska), thence southward through Bering Strait and the Bering Sea into the Pacific Ocean. During the voyage, a series of hydrographic, current and oceanographic surveys was carried out.

34273. CROWSNEST. Matelot in mukluks; Navy's northern expert studies winter clothing, equipment. (Crowsnest, Mar. 1950. v. 2, no. 5, p. 10-11, illus.)

Contains biographical sketch of Lieut.-Cdr. (SB) James P. Croal, his experience on Exercise Musk-Ox 1945-46, in testing and experimentation work at Churchill, etc.; appointment in 1949 as Navy representative in the Directorate of Inter-Service Development. Among his duties is the testing of clothing and equipment in arctic and subarctic conditions.

34274. CROWSNEST. North of sixty-eight; new barracks block houses sailors in Aklavik. (Crowsnest, Nov. 1953. v. 6, no. 1, p. 20)

Contains brief description (signed C. P. L.) of the Royal Canadian Navy's station at Aklavik (Mackenzie District, 68°13' N. 135° W.) and the new barracks block which houses a galley, mess-deck and recreational area. The town (1080 Eskimos, 175 Indians, 261 Whites), weather, social activities are noted, in particular the local radio station CHAK, and two churches with services conducted in Eskimo, Loucheux, and English, and broadcast.

34275. CROWSNEST. The Northwest Passage. (Crowsnest, Oct. 1954. v. 6, no. 12, p. 5) Reprinted from *Ottawa Journal*, Sept. 24, 1954.

Editorial on the east-west navigation of the Northwest Passage in summer 1954, by the 6,500 ton HMCS *Labrador*.

Copy seen: DLC.

34276. CROWSNEST. Polar patients; RCN hospital at Halifax treats Eskimos from Eastern Arctic. (Crowsnest, Aug. 1950. v. 2, no. 10, p. 4-5, illus.)

Some 125 Eskimos have been treated at the Royal Canadian Naval Hospital at Halifax, Nova Scotia, during 1947-50, following an agreement with the Dept. of Indian Affairs. Described as ideal patients, they are seldom more than 15 in hospital at one time. All are flown down by the Royal Canadian Air Force.

34277. CROWSNEST. A rugged trip; "Cedarwood" logs 10,000 miles on 2½-month cruise. (Crowsnest, Nov. 1949. v. 2, no. 1, p. 4, illus.)

Contains brief account of the Royal Canadian Navy's HMCS *Cedarwood's* cruise to the Arctic, July-Sept. 1949, Lieut.-Cdr. J. E. Wolfenden in command. Purpose of the trip was to spend two weeks in a concentrated study of oceanographic conditions in waters north of the Aleutians. The ship was accompanied by the USS *EPCE (R)-857*, a seagoing experimental laboratory, and the U. S. Navy submarine *Baya*.

Contains "a study of 693 spectrograms obtained with successive exposures of

about 1½ hours each night. A table shows wave-lengths, probable origins and frequency of the occurrence of the radiations. 'The radiations at Chesterfield [63°40' N. 90°30' W.] . . . are characteristically auroral whether aurora is visible or not.' Green line luminescence does not occur here as continuously as at lower latitudes. The effect of moonlight and twilight on red radiations was investigated and correlations between auroras, terrestrial magnetism and earth currents pointed out."—*Meteorological abstracts & bibliography*, Mar. 1954. v. 5, no. 3, p. 390. **Copied seen:** DLC.

34283A. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Ice, soil temperatures. [Saskatoon] University of Saskatchewan, Physics Dept., 1954? 28 p. graph, 3 tables, Mimeographed. 48 refs.

This and the five titles following have been made available separately, by the Saskatchewan Research Council, apparently prior to their being printed (together) as a climatological monograph on the provinces of Manitoba, Saskatchewan and Alberta (all south of 60° N. lat.) and the Northwest Territories of Canada.

In this part, writer deals with: effect of ice on transportation in the North; factors determining ice formation and disintegration; thickness of ice; dates of freeze-up and break-up of ice on rivers and lakes; permafrost; earth temperatures. Data are included from the Mackenzie drainage basin and Hudson Strait. **Copied seen:** CaOGB; DWB.

34283B. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Precipitation. [Saskatoon], University of Saskatchewan, Physics Department, July 1953. 63 p. 7 sketch maps, 9 graphs, 15 tables. Mimeographed. 5 refs.

Rainfall rather than snowfall is stressed and the Prairie Provinces therefore, considered in more detail than the Northwest Territories. Topics discussed include: factors affecting precipitation; mean annual amounts and days of precipitation; days per month with precipitation; monthly precipitation in relation to commercial enterprises; daily precipitation; hours with precipitation; diurnal variation of rainfall; rainfall intensity; and drouths. Data, among others, are given for Mackenzie and

Keewatin Districts; maps include southwestern Canadian Arctic Islands to about 72° N. lat.

Copied seen: CaOGB; DWB.

34283C. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Snowfall. [Saskatoon], University of Saskatchewan. Physics Dept. Nov. 1953. 38 p. 3 sketch maps, graph, 6 tables. Mimeographed. 4 refs.

Deals with: general characteristics of, and mean annual, snowfall; expectancy of various annual, and monthly amounts of snow; aggregate, daily, and hours with snowfall; blizzards and drift storms; dynamics of snow drifting; some physical characteristics of snow; its deposition during drift storms; snow clearance from highways; snow in relation to agriculture, to other activities. Data are included for Mackenzie and Keewatin Districts, and maps include southwestern Canadian Arctic Islands to about 72° N. lat. **Copied seen:** CaOGB; DWB.

34283D. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Temperature. [Saskatoon], University of Saskatchewan, Physics Dept. Aug. 1953. 72 p. 17 sketch maps, 8 groups, 11 tables. Mimeographed. 16 refs

Mean monthly temperatures, variabilities of the mean, mean monthly maxima and minima, and extremes of daily maxima and minima are considered; also: subarctic days (max. temp. below 0° F.), forty-below-zero days, summer days (max. temp. of 77° F. or higher), and tropical days (max. temp. of 86° F. or higher). Changes in monthly temperature values from month to month, and beginning and ending of the seasons are discussed. Data are given from stations, among others, in Mackenzie and Keewatin Districts, Canadian Arctic Islands, and Baffin Island. Maps cover region to approx. 80° N. lat.

Copied seen: CaOGB; DWB.

34283E. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Vegetative and frost-free seasons. [Saskatoon], University of Saskatchewan, Physics Dept., Jan. 1954. 23 p. 2 sketch maps, graph, 3 tables. Mimeographed. 3 refs.

Topics discussed include: the vegetative period; day-degrees for growth; the frost-free season and its variability; microclimatic factors; trends in the

lengths of the vegetative and frost-free seasons. Data are included for Keewatin and Mackenzie Districts and northern Manitoba, and maps include the southern Canadian Arctic Islands to about 72° N. lat. **Copy seen:** CaOGB; DWB.

34283F. CURRIE, BALFOUR WATSON, 1903- . Prairie Provinces and Northwest Territories. Wind and storms. [Saskatoon], University of Saskatchewan, Physics Dept., 1954? 41 p. 2 sketch maps, 6 diagrs., 7 tables. Mimeographed. 5 refs.

Average wind directions and speeds, maximum daily mileages, frequencies of winds of different speeds, excessive speeds, diurnal variations of speeds and directions are dealt with; also: chinook winds, dust storms and wind erosion of soils, thunderstorms, hail storms, and tornadoes. Data are included for Mackenzie and Keewatin District, southwest Canadian Arctic Islands, and Baffin Island. **Copy seen:** CaOGB; DWB.

CURTIS, GARNISS HEARFIELD, 1919- , see Williams, H. Preliminary notes . . . geology . . . Mount Katmai and in the Valley of Ten Thousand Smokes, Alaska . . . 1954. No. 38264.

34284. CURTIS, HEBER D. Navigation near the Pole. (United States Naval Institute. Proceedings, Jan. 1939. v. 65, no. 1 (whole no. 431), p. 9-19, 5 fig., 3 tables)

Peary's astronomical observations near the North Pole in 1909 are analyzed in detail. The Saint-Hilaire navigational method employed by Peary is described; the actual observations are discussed and possible omissions in data or treatment are probed; a re-reduction of the observations is made with Camp Jesup as origin and using data computed by Mitchell and Duvall and recomputed by the writer. It is concluded that Peary sledged within about 0.8 mile of the Pole on his second sledge trip. Given that Peary spent but 30 hrs. at the Pole, had to determine the position of Camp Jesup, and that sledge trips had to be made from Camp Jesup so as to pass as nearly over the Pole as was practicable, it is concluded that possible past or present improvements in the determination of Peary's position could not have been made. Previously listed as *Arctic Bibliography*, No. 3512.

34285. CZAPLICKA, MARIE ANTOINETTE, d. 1921. On the track of the Tungus. (Scottish geographical magazine, July 1917. v. 33, no. 7, p. 289-303, 6 illus.)

This paper, presented to the Royal Asiatic Society, Feb. 13, 1917, deals briefly with the origin of the Tungus, their migrations, wide dissemination, language, and refers to early Chinese chronicles as a promising source of information on them.

Previous investigators' and the writer's (1914-1915) field studies in north Central Siberia are outlined, and the Tungus as she found them considered in some detail. She spent the summer of 1914 with the Dolgans at the mouth of the Yenisey, then travelled among the northern Tungus living between the Yenisey and Lena. Their physical type, racial affinities and metization, beliefs and shamanism, folklore and art, etc., are dealt with, preliminary to a later fuller report. cf. No. 21323.

34288. DADYKIN, VSEVOLOD PETROVICH. Kak zhivet rastenie na kralnem severe. Moscow, Sel'khoziz, 1953. 109 p. illus. Text in Russian. **Title tr.:** How plants grow in the far North.

"Climate, soils, general natural conditions and agricultural progress in the far North are discussed. Progress in agriculture is attributed to the application of modern agrotechnical methods. Thus agriculture has been made possible as far north as lat. 68°-79° N. in the European U.S.S.R. and lat. 70°-71° N. in the Asiatic U.S.S.R. compared to previous lat. 65°-66° N. Almost at lat. 70° N. crops such as potatoes, cabbage, carrots and turnips, and in some places even tomatoes, thrive; cucumbers are grown in greenhouses. Methods of snow melt and frost combat are also discussed."—*Meteorological abstracts and bibliography*, Sept. 1954. v. 5, no. 9.

34306. DANILEVSKIĬ, NIKOLAI ĬAKOVLEVICH, 1822-1885. O mîrakh k obezpecheniû narodnogo prodovol'stviâ na krafnem Sîverî Rossii. (In his: Sbornik politicheskikh i ékonomicheskikh statei, 1890, p. 501-623). *Originally pub. in:* Pravitel'stvennyi viestnik, 1868, no. 90-93) Text in Russian. *Title tr.:* On measures for stabilization of the food industry in the far North.

Contains the results of an economic survey of Arkhangel'sk province carried out by the author in 1868, after a bad harvest year (1867). Even in good years, he notes, the population had not enough bread and fish, and had to buy them either from Scandinavia or in other provinces

of Russia. This situation could be relieved by some practical measures, including the development of two principal industries, viz. forestry (timber) and fishery (herring and cod), also some secondary ones, such as manufacturing of tar, pitch, turpentine, potash, etc. This would increase the purchasing power of the population and help build up adequate food supplies. The need for better communications and creation of new industries and trades is stressed. Author was a noted writer, a naturalist and economist of wide interests, in the service of the Ministry of Rural Economy.

34307. DANILOV, D. Lesa i lesnoe khoz'fstvo ĭakutii. (Sovetskoe kraevedenie, Aug. 1935. no. 8, p. 45-48) Text in Russian. **Title tr.:** Forests and forestry of Yakutia.

One half of the territory of Yakutia, approx. 180 million hectares, is covered by forest; but due to harsh climate and poor soil, its yield is very low, an average of 35-40 cu. m. of timber per hectare. The principal tree is the Daurian larch (*Larix dahurica*). Only three percent of the forest is explored and only a fraction utilized. Regional students (*kraevedy*) must help in a systematic description and inventory of the forests of Yakutia.

In 1947 a series of annual tagging experiments was started by the Norwegians on the mature cod occurring on the Lofoten banks during Feb.-Mar., the spawning season. The results showed that this cod population has important feeding grounds in the Barents Sea, including the Bjørnøya banks, and that the feeding cod undertake long and definite migrations within this area. These migrations are briefly described.

34312. DARLING, FRANK FRASER, 1903- . Caribou, reindeer and moose in Alaska. (Oryx, Aug. 1954. v. 2, no. 5, p. 280-85)

Contains a summary of an investigation into the past and present status of these economically important animals, conducted by the author and Dr. A. S. Leopold in Alaska in 1953 and sponsored by the Conservation Foundation and the New York Zoological Society. Changes in the animal population due to man's interference are revealed. Reindeer were introduced into Alaska from 1891 to 1912, increased from 1,200 to 650,000 head in 1932, then fell catastrophically

to 25,000 by 1950. The chief factor was destruction of forests by fire and overgrazing of the reduced winter feed. The author makes suggestion for enlightened wildlife management in the future.

34314. DASHER, CHARLES LANIER, Jr., 1900- . "Ski Jump" tests men and logistics. (Army information digest, Sept. 1954. v. 9, no. 9, p. 3-14, illus.)

Account of the U. S. Army's large-scale mountain and cold-weather warfare maneuver for the winter of 1953-54 in the Rocky Mts., Colorado. Exercise Ski Jump, directed by the writer, had two missions: testing and training ground forces for peak combat efficiency, and for survival under the extreme mountain (10,000-12,000 ft. elevation) and cold weather conditions. Temperatures as low as -27° F. were encountered. Logistical problems, individual and unit training, umpire training, intelligence and aggressor, and air activities are described. Maneuver units were largely dependent on M29 weasels and mules; the need for an efficient oversnow vehicle to replace the M29 was apparent.

34315. DAUBENMIRE, REXFORD F., 1909- . Notes on the vegetation of forested regions of the far northern Rockies and Alaska. (Northwest science, Nov. 1953. v. 27, no. 4, p. 125-38, 4 tables) 5 refs.

Contains account of vegetation (exclusive of tundra) observed during a trip in summer 1951 from Edmonton (Alberta) to Athabaska, Dawson Creek (British Columbia), Fairbanks and Circle

(Alaska), with side trips from Delta Junction to Anchorage and Tok Junction, and from Haines Junction (Yukon Territory) to Haines (Alaska). Described in turn are: forests of well-drained uplands (plains of northern Alberta, mountains of northern British Columbia and southwest Yukon, *Picea glauca* forb-poor forest west of Whitehorse); forests characteristic of cold wet soils — muskeg; upper timberlines; vegetation around fresh-water ponds, and around a saline pond; frost hollow vegetation; grasslands; and vegetation of the seaward slope near Haines, Alaska. In each case typical species are listed and associations are discussed.

Objective was to secure material for reconstruction of the anthropological history of the Katmai National Monument region. Little is known about the aboriginal inhabitants of the northern Alaska Peninsula, and the opportunity is presented here to study adaptations made by peoples of the same cultural background to two ecological environments, seashore and inland. During the Katmai Project, summer 1953, excavations were made at four village sites, 721 archeological specimens were collected, and wood and carbon samples were obtained for carbon-14 analyses. Surveys were made by helicopter, land plane, and boat. Findings are listed and conclusions briefly discussed. Material culture of the former inhabitants was found to be relatively homogeneous for both coastal and inland areas. **Copy seen:** DI.

34325. DAVYDOV, A. V. Puti ratsionalizatsii rubok i vozobnovleniia lesa v taezhnof zone. (Lesnoe khozïalstvo, June 1954. v. 7, no. 6, p. 17-22) Text in Russian. **Title tr.:** Methods of rationalization of cutting and of reforestation in the taiga zone.

The increasing mechanization of cutting and concentrated cutting make natural reforestation impossible and create the need for new methods of forest recovery. To this problem currently under discussion in this journal, Davydov, vice-director of the Central Scientific Research Institute of Forestry, contributes general remarks on the defects in forest exploitation; the silvicultural aspect is disregarded and cutting areas are left in conditions which prevent natural reforestation and hamper artificial sowing. Conclusion is reached that the methods of exploitation must be harmonized with requirements of silviculture.

Drift-covered areas of Keewatin west of Hudson Bay are almost everywhere characterized by drumlin-like landforms; drumlinoid fields spread fanlike from Hudson Bay, with a number of subordinate patterns oriented at oblique angles to main directions of movement. These forms possibly were caused by movement of the continental ice sheet over a surface on which material was available for moulding, and probably originated during the ice sheet's advancing stage or stages. Effect of composition and depth of the till on the shape of the drumlinoids is discussed.

The ice islands of the Arctic: a hypothesis. (Geographical review, Oct. 1954. v. 44, no. 4, p. 495-507, 3 illus., diags.) 3 refs.

"It is suggested that growth of the ice islands occurs from the freezing of sea water beneath the islands, since it is unlikely that the small precipitation and extensive thaw along the Ellesmere coast would favor accretion of snow on the coastal fringe ice. The presence of mud, sand and rock on the ice surface supports this hypothesis. The waves or corrugations in the surface of the fiord ice along Ellesmere Island, from which the ice islands originate, result from regular tidal pressure on the floating midsection or from the freezing of water in cracks in the ice. The yearly addition of ice at the sides is also a contributing factor."—SIPRE. Similar forms of ice were observed by the writer with Capt. Scott's Antarctic expedition of 1910-1913.

Die Klinik und die Behandlung der örtlichen Erfrierungen. Militärärztlicher Bericht über 26 Fälle von Kälteschäden beim Dislokationsmarsch zu einem Skikurs entstanden. Bern, H. Huber, 1941. 128 p. illus. (Herausgegeben von einer MSA) Text in German. **Title tr.:** Clinical course and treatment of local frostbite; military-medical report on 26 cases of frostbite incurred on a march to a ski course.

About the middle of February 1940, a detachment of Swiss ski troops suffered heavy losses from frostbite while on maneuvers. Following a description of the medical problem by the editor, accounts are presented by those responsible for the specific phases of action, as follows:

Reist, Alfred. *Schadenereignis und erste Hilfe* (Circumstances of injury and first aid). p. 15-22. Rapid drop of temperature during a more than ten hours' march and initially wet snow were the main causes of the disaster in which 96 men out of 249 were affected by first-third degree frostbite. Rubbing with snow, massage and baths were first applied.

Kuoch, Arthur. *Bericht über den Abtransport am 13. Febr. 1940* (Report on the evacuation, Feb. 13, 1940). p. 23-27. Evacuation was done in closed trucks provided with heating arrangements, stretchers and seats. Evacuation is described in detail.

Debrunner, Hans. *Ankunft und erste Hilfe in der MSA*. (Arrival and first aid at the MSA). p. 29-32. Early symptoms and therapy, the latter consisting in topical medication, opening of blisters, bandaging, etc., are described.

Campell, Rudolf. *Richtlinien für die Behandlung der örtlichen Erfrierungen* (Directives for treatment of local frostbite). p. 33-44. A description of the symptoms of the three degrees of frostbite is given. Recommended and applied therapy: rubbing with snow, cold baths, slow rewarming, topical medication, etc.

Burri, Roman. *Krankengeschichten und statistische Bemerkungen* (Case histories and statistical notes). p. 45-99. Twenty-six case histories involving hands or ears with first-third degree injuries are presented. Sketches, photos (some colored)

radiograms, etc., and a statistical summary, are included.

Jaeger, Walther. *Röntgenologische Beobachtungen* (X-ray observations). p. 101-103. Injuries of vessels, but especially those of cartilage and bones are described and discussed.

Debrunner, Hans. *Überblick* (Review). p. 105-123. Discusses etiology, pathology and degrees of frostbite; clinical aspects, therapy, surgery, sequels.

Contains brief description of the Norwegian occupation and establishment of a weather station on Jan Mayen in Mar. 1941. The station was originally manned

by one officer, 12 enlisted men, and three meteorologists, who were regularly supplied and relieved. A radiosonde station was erected in May 1944, and a well camouflaged German automatic weather buoy was discovered in Mar. 1945.

34338. DEGE, WILHELM, 1910- . Svalbard während und nach dem Kriege. (Polarforschung, 1952. pub. 1954. Bd. 3, Heft 1-2, Jahrg. 22, p. 169-72) 3 refs. Text in German. **Title tr.:** Svalbard during and after the War.

Contains account of military activities of Allied and German forces in Vestspitsbergen during World War II, the extent of destruction to the coal mines, and postwar reconstruction of settlement and mining installations. Norwegian coal production reached the pre-war level of 428,000 tons by 1948 and is rising. Increased gypsum and anhydrite production near Skansbukta and Tempelfjord is expected. Limited quantities of zinc and lead are mined in Vestspitsbergen. Many trappers have returned; the fox population increased during the war years, but the imported Greenland hare failed to acclimatize well. Norwegian efforts to improve navigation are described. A Klevin-Hughes type radar installation was erected in 1950, the first on Norwegian territory. **Copy seen:** DLC.

Rates of growth of embryos and larvae from Southeast Alaskan populations were found to be considerably greater than those from Southern California "at a given, comparable temperature." Factors possibly responsible for the high growth rate in the North (growth factor in sea water; differences in yolk), the shapes of northern and southern growth curves, etc., are discussed.

ducks, swans and geese, sheldgeese and shelducks. London, Country Life Ltd., 1954. 284 p., 16 col. plates, 33 text maps.

A basic source of information on the waterfowl of the northern regions, as well as of the world, this volume is the first of a projected three-volume work of the family Anatidae, a taxonomic study of the subfamilies Anseranatinae, Anserinae and Anatinae. A systematic list of the species, characters of the subfamilies, keys to the species and descriptions of about one hundred are presented. The synonyms, characteristics, general habits and data on distribution and life in captivity are given for each species. Colored plates by Peter Scott and distributional maps covering all northern regions are added.

34344. de LAGUNA, FREDERICA, 1906- . Tlingit ideas about the individual. (Southwestern journal of anthropology, 1954. v. 10, p. 172-91) 8 refs.

Contains data gathered in 1950 and 1952 in two villages of the northern coastal Tlingit and supplemented by information from the northern interior Tlingit in 1948 and 1951. To these Indians, the individual, or self, has a social aspect, a corporeal aspect or "body," and a spiritual aspect or "soul." "These different aspects of the individual are sometimes conceived almost as separate or separable parts; at other times they are fused or confused; but they are not clearly integrated to constitute a unique or single entity." These are discussed in turn. Reincarnation, significance of the name, magical transformations, and death and the after-life are also dealt with. "The individual . . . is not a unitary self, distinct from all others, but is both compounded of and linked to other selves: his ancestors, his descendants, and even his contemporaries." His self participates in their selves, in supernatural beings and portions of the inanimate world.

The main part (p. 23-234) by P. P. Smolin and S. D. Pereleshin consists of the calendar proper, which presents, in monthly sequence, biological conditions of numerous fur-animals, and birds, and the hunting and trapping of them. Included are common arctic forms: polar fox and bear, snow hare, reindeer, etc., wild ducks, eiders, geese, etc. A chapter by S. D. Pereleshin (p. 236-53) deals with hunting and economic regulations on animals, including arctic forms. Another one by P. P. Smolin (p. 254-64) deals with conservation measures regarding birds including those in arctic areas. Hunting rifles, traps and snares, hunting dogs and falcons, preparation of skins, etc., are also treated. The extensive bibliography lists some thousand Russian books on the hunting industry by region or subject, also 50 journals. **Copy seen:** DLC.

Contains an account of the so-called Special (secret) Hydrographic Expedition of the Far East, under command of B. V. Davydov, on the ice-breaker, *Krasnyi Oktâbr'* to Vrangeli Island. The expedition started from Vladivostok on July 20, 1924, sailed to Petropavlesk in Kamchatka, and reached Cape Uëring on Vrangeli Island on Aug. 19th. The southern coast of the island was surveyed, the Soviet flag was raised and four Canadian trappers on the island were arrested and taken aboard the *Krasnyi Oktâbr'*. After a very difficult return voyage through heavy, floating ice, the ice-breaker reached Vladivostok on Oct. 23, 1924. **Copy seen:** DLC; MH.

34356. DE NIEDERHÄUSERN, ARNOLDO. Nuovi indirizzi terapeutici nelle congelazioni. (Accademia medica,

Genova, Aug. 1940, v. 55, p. 298-311) Text in Italian. *Title tr.:* Progress in the therapy of frostbite.

Contains a discussion of the more recent developments in France and Germany with regard to frostbite prevention, therapy, and surgery; also its pathogenesis, local medication, effect of alcohol, sympathetic intervention, etc., and its physiology.

Copy seen: DSG.

34357. DENIKER, JOSEPH, 1852-1918. Gilyaki. (In: Novyi entsiklopedicheskiĭ slovar' Brokgauza i Efrona. 2nd ed. [1914] t. 13, col. 511-14) 5 refs. Text in Russian. *Title tr.:* The Gilyaks.

Contains description of this people, accounted Paleo-Siberians by the author. Gilyaks live on Sakhalin Island, the nearby coast of the Asiatic mainland and the lower Amur; they are not aboriginal to this region but probably came from farther north. Their physical type has elements similar to those of Tungus and Ainu; their language has structural affinities with American Indian languages. Details are given on Gilyak clothing, dwellings (semi-subterranean earth huts for winter, wooden huts for summer), their weapons and hunting, dog sledges, domestic utensils of wood and bark, carving and ornaments, family life, religion, burial customs, social organization, etc.

34358. DENISON, M. E., and M. X. ZARROW. Eosinophils of blood during prolonged exposure to cold and chronic administration of cortisone acetate. (Society for Experimental Biology and Medicine. Proceedings, Mar. 1954, v. 85, no. 3, p. 433-37, 2 fig., 2 tables) 24 refs.

In rats exposed to cold, the level of eosinophils dropped after six hours, but returned to normal values within 48 hr. of exposure. Administration of cortisone acetate at a daily dose of 100 micrograms was necessary to depress the level of eosinophils during the period of cold exposure (90 days). Evidence suggests that an eucorticoid state may develop during cold adaptation.

"Meteorological data for 1925-1941 from 11 selected weather stations . . . are given. [Scoresbysund and Angmagssalik on the east coast; Nanortalik, Ivigtut, Godthåb, Kapisigdlit, Qornoq, Godhavn, Jakobshavn, Umanak and Upernavik on the west coast]. The tables include the no. of days with precipitation, fog and snow cover, and data on wind frequency and speed, air temperature, rain, snow, sleet and hail. Air temperatures and winds are also graphed."—SIPRE. **Copy seen:** DLC.

34360. DENMARK. GRØNLANDS-DEPARTEMENTET. Report on Greenland, 1954. Copenhagen, 1954. 88 p. text map, graph, 43 tables. Mimeo-graphed.

Sixth annual report to the United Nations, and the last, as on June 5, 1953 Greenland lost colonial status, becoming an integral part of the Danish realm. Previous reports (except 1950, not seen) are listed as *Arctic Bibliography*, No. 2367, 21419-21420, 28729. In sequence to the last, this 1954 report covers the period Apr. 1 to June 5, 1953, and is in addition a most useful compendium of developments from 1948 to this historic date. In form similar to previous reports: (1) *General information* (p. 1-17) covering geography, history, people, with vital statistics 1939-1952, and government; (2) *economic conditions* (p. 18-55) dealing with agriculture and livestock, forestry, hunting, fisheries, mining, power, industry, transport and communications, public finance, banking and credit, also international trade. (3) *Social conditions* are reviewed (p. 56-73) under: human rights, status of women, labor and employment, cooperative societies, standards of living, town and rural planning and housing, social security and welfare, prevention of crime, and public health. (4) *Educational conditions* are treated (p. 74-88) in terms of administration; structure of the system; adult education; school buildings and equipment; youth organizations; cultural institutions; protection of nature; mass communications.

First in a projected series of reports on frequency of low temperatures in the

Northern Hemisphere; this was prepared for persons responsible for conducting low temperature tests and research at this military post on Hudson Bay (58°46' N. 94°10' W.). Temperatures at or below -25° F. may be expected during 30-40 percent of Jan.-Feb.; at or below 0° F. during 68 percent of Dec., 90 percent of Feb., and 62 percent of Mar.; at or below 32° F. more than 95 percent of period Nov.-Mar. High wind speeds and low temperatures cause excessive wind-chill in winter. Average value in Jan. is 1,765 kg.-cal./m.²/hr.

34365. DE QUERVAIN, MARCEL. Snow as a crystalline aggregate. Wilmette, Ill., May 1954. 7 p. illus., 2 graphs. (U. S. Army. Corps of Engineers. Snow, Ice and Permafrost Research Establishment. Translation 21) 11 refs. Translated by Charles M. Gottschalk from: *Schnee als kristallines Aggregat*. (Experientia, Oct. 15, 1945. v. 1, p. 207-212)

"Fresh snow is composed of a large variety of crystals. Changes in the atmospheric conditions determine the growth and structure of these crystals, so that non-homogeneous material results. The density is increased after the snow is deposited due to the weight of the snow and the action of inter-crystalline forces. Metamorphism of the snow crystal depends on the stability of the crystalline form. The early transformation phase is attributed to surface expansion of a

superficial layer having fluid-like properties with which the crystals are believed to be covered. Subsequent change into coarsely grained old snow takes place due to temperature variations and the exchange of diffusion and convection vapor currents in the snow cover. The relationship between the plasticity of the snow aggregate and the crystal plasticity is studied by means of deformation tests. The elastic reaction has observed the plastic properties of snow so that until recently it was difficult to observe the firmness and the recovery of the crystals. It is shown that snow is a viscous liquid. Thin ground plates of snow are used for microscopic studies of the snow grain orientation."—SIPRE.

34375. DESIGN NEWS. Polar path. (Design news, Dec. 1954. v. 9, no. 23, p. 10)

Brief description of *Polar path*, a compass developed by Bendix Aviation Corp. for use in polar areas. The gyro compass automatically feeds heading information to the automatic pilot and to an indicator on the instrument panel. Variation is less than 1°/hour of flight and performance will not vary from -65° F. to 185° F. Drifts are corrected and constant course corrections made by astro-navigation are eliminated. Polar twilight compensation is included. Scandinavian Airlines are using the device in commercial flights across polar regions between Copenhagen and Los Angeles.

Copy seen: DLC.

34376. DESIGN NEWS. "Twilight navigator" uses sun's reflected polarized light. (Design news, Dec. 15, 1954. v. 9, no. 24, p. 34-35, illus. diagr.)

"Arctic 'twilight' periods do not necessarily mean navigation hazards any more. The sun can be used for navigation even when it is not visible by observation of its reflected polarized light."

Description and schematic design is given of Sky compass produced by Kollman Instrument Co. from a basic design by A. H. Pfund. The compass uses a partial half wave plate and polarizing plate analyzer with the optical system of the periscopic sextant. The analyzer image, the vertical reference and the true heading scale can all be observed in the same focal plane from the single eyepiece.

Text in French. *Title tr.:* Oxidative activity of different tissues of the white rat in the course of adaptation to cold.

Contains account of determinations of succinic dehydrogenase in the liver, muscle and adrenal, and of glycogene in the liver and muscle.

Copy seen: DSG.

34378. DES MARAIS, ANDRÉ. Effets de l'acide ascorbique sur la consommation d'oxygène et la teneur en glycogène du foie chez le rat blanc exposé au froid ou maintenu à la température normale. (Revue canadienne de biologie, Sept. 1953. v. 12, no. 1, p. 99-104, tables) 13 refs. Text in French. *Title tr.:* The effect of ascorbic acid on oxygen consumption and glycogen content of the liver of white rats exposed to cold or kept at room temperature.

In animals exposed to cold, an increase of oxygen consumption was found in the liver; administration of ascorbic acid significantly increased O₂ consumption during the first two days of cold exposure. Cold environment caused a considerable decrease of liver glycogen, especially in animals treated with ascorbic acid.

Priamurskii otdel. Vladivostok. Obshchestvo izucheniiâ Amurskago kraia. Zapiski, t. 2) Text in Russian. **Title tr.:** Anadyr' district; manuscript of an inhabitant of the village of Markovo; with an introduction by Mr. F. F. Busse.

Contains observations and notes made around 1880-1890 by a slightly educated native of Chuvantsy descent, whose parents had used the Russian language. He was guided in his work by a physician, Leonid Frantsovich Grinevetskii, and after the latter's death, the ms. was carefully edited by F. F. Busse who contributes also a statistical survey of the christianized population of the district. The geography of the region, its climate, vegetation and animals are described; also, and more extensively, the people and their mode of life. Historical reminiscences are collected on the coming of the Russians into the Anadyr' region. Markovo village (64°40' N. 170°25' E.) and its inhabitants are treated in detail, with vital statistics for 1863-1889. The native peoples: Chukchis, Lamuts, Koryaks, Yukaghirs, and Chuvantsy, and their territory are sketched (p. 49-66); and the populated places on the Anadyr River are listed with brief notes on each. The occupation of the people, their languages, family and commercial relations, customs of the life cycle, health conditions and epidemics of 1881-1883 are characterized. Notes are included on the use of poisonous mushrooms, on mythology and superstitious beliefs, shamanism, beliefs on the bear, etc. Trade in the Anadyr' region, kinds of wares and prices, the role of

American merchants, communication routes and other facts of economic life are supplied.

34397. DINELEY, D. L. Investigations in Vestspitsbergen. (Journal of glaciology, Oct. 1954. v. 2, no. 16, p. 379-83, 2 text maps, 2 diagrs.) 3 refs.

In summer 1951, as geologist with the Birmingham University Expedition, the writer examined deep gullies cutting the coastal cliffs of the strandflat south of St. Jonsfjorden on the east shore of Forlandsundet, Vestspitsbergen (approx. 78°30' N. 12°30' E.). These gullies do not appear to have been cut by streams. The lower sections of almost all of them are occupied by snow patches, and the writer suggests that frost action and snow-patch erosion may have been responsible for their formation. Glacier recession, relic proglacial features, and present glacier-dammed ("glint") lakes in the region between St. Jonsfjorden and Isfjorden are also described.

34401. DIVIN, V. A. Vasilii Mikhailovich Golovnin. (*In:* Lupach, V. S. Russkie moreplavatel'i, 1953, p. 165-84, illus., port., text map) Text in Russian.

Contains a biographical sketch of Golovnin (1776-1831) admiral, explorer and writer; and an account of his voyage on the sloop *Diana* in 1807-1810, around Cape Horn, to Kamchatka (1809) and then to Alaska (1810) and back to Petropavlovsk. In 1811 he surveyed the Kuril Islands and together with seven officers and sailors was captured by the Japanese; he was released in 1813. In 1817-19 he made a round-the-world voyage on the ship *Kamchatka*, visited Kamchatka (1818), surveyed again the Kuril Islands, Kodiak Island and California. He described his travels and his captivity in Japan in three separate works, two of them abstracted in the present volume of *Arctic Bibliography*. Golovnin is treated in Magidovich's guide *infra*, p. 498.

34402. DIVIN, V. A. Velikii russkii moreplavatel' A. I. Chirikov. Moskva, Gos. izd-vo geogr. lit-ry, 1953. 277 p. maps (6 fold.) 148 refs. Text in Russian. **Title tr.:** A great Russian navigator, A. I. Chirikov.

A biography of Aleksei Il'ich Chirikov, 1703-1748, and account of his participation in the Great Northern (here called the Siberian-Pacific) Expedition, 1725-1743, extolling his achievements above

Bering's. Introductory survey is given (p. 3-26) of foreign and Russian attempts to navigate the Northeast Passage, voyages of Dezhnev, Pofarkov, Atlasov, the Great Northern Expedition, Lisianskii, Lazarev, Golovnin, Nevel'skoi. Brief account is given (p. 27-58) of Chirikov's background and education, Tsar Peter's aims in the Great Northern Expedition, Chirikov's participation in the voyage under Bering on the *Sv. Gavriil* from Okhotsk and Kamchatka to Chukchi Sea in 1728 and 1729. Chirikov's role in the second phase of the Expedition is presented in some detail (p. 59-127): its organization and preparation, Chirikov's journey with wife and daughter to Yakutsk and Okhotsk in 1733-38, his conflicts with Bering, building of the *Sv. Petr* and *Sv. Pavel* in Okhotsk, and their trip in 1740 to Kamchatka. The Kamchadals are described (after Sven Waxel); and achievements of other parties of the Expedition, Ovtšin, Minin, Pronchishehev, Chelūskin, etc., and Shpanberg's voyages to Japan in 1738-39 are noted. The voyages of Chirikov and Bering on the *Sv. Pavel* and *Sv. Petr* in 1741 and 1742, and their discovery of northwest coast of America and the Aleutian Islands, is recounted (p. 128-93) from log books and reports of the participants. Results of the Expedition are presented (p. 194-223); the general map signed by Chirikov and other officers May 10, 1746 (reduced photo-copy included), Chirikov's memorandum on Far East policy; expeditions of Krenitsyn, Shelekhov, Kruzenshtern, Lisianskii, Golovnin, competition with France, Great Britain and America are reviewed, and brief survey is given Russian policy in the Far East to World War II. Appended is text of Chirikov's unpublished reports of Dec. 13, 1742, and Mar. 13, 1746, on the winding-up of the Expedition and controversies with Shpanberg, also an extensive bibliography on the Expedition.

34405. DIXON, JOSEPH SCATTER-GOOD, 1884- . The home life of the Baird sandpiper. (Condor, May-June, 1917. v. 19, no. 3, p. 77-84, illus., text map)

Contains observations on breeding habits, food, nests and eggs of *Pisobia bairdi*, made in the summers of 1913 and 1914 in northern Alaska (map). This bird breeds along the arctic coast from Point Barrow to northern Keewatin; it was taken also in northeastern Siberia (Provideniya Bay and Kolyuchin Island).

Copy seen: DSI; MH-Z.

34406. DIXON, JOSEPH SCATTER-GOOD, 1884- . A life history of the northern bald eagle. (Condor, Nov. 1909. v. 11, no. 6, p. 187-93, illus.)

Contains observations on *Haliaeetus leucocephalus alascanus* made on the Admiralty Islands and on Hawkins Island, Prince William Sound, Alaska. Photographs of nests and notes on the eggs and the behavior of the young in captivity are added. **Copy seen:** DLC; MH-Z.

34407. DIXON, JOSEPH SCATTER-GOOD, 1884- . Migration of the yellow-billed loon. (Auk, Oct. 1916. v. 33, no. 4, p. 370-76)

Contains the results of observations during the Harvard Alaska-Siberia Expedition, 1913-14, on the nesting and migration routes of the yellow-billed loon. The author corroborates in general the spring migration route outlined in W. W. Cooke's paper *The yellow-billed loon*, 1915, q. v.; but he thinks it improbable that the species breeds on the arctic coast of Alaska and Canada which it travels in migration. No information was obtained regarding the fall migration, and the author recommends scrutiny of the Southeast Alaska coast for such.

Copy seen: DSI; MH-Z.

34408. DIXON, JOSEPH SCATTER-GOOD, 1884- . The nesting grounds and nesting habits of the spoon-billed sandpiper. (Auk, Oct. 1918, v. 35, no. 4, p. 387-404, illus., plate 5, text map) 22 refs.

Contains a critical analysis of the nesting grounds of *Eurynorkhynchus pygmaeus*, essentially an Asiatic species, breeding on the coast of northeastern Siberia (Provideniya Bukhta, Mys Serdtse Kamen', Mys Vankarem) and occasionally found in northern and central Alaska. (Choris Peninsula, Kotzebue Sound and Wainwright Inlet).

Copy seen: DSI; MH-Z.

34409. DIXON, JOSEPH SCATTER-GOOD, 1884- . Nesting of the wandering tattler. (Condor, Sept.-Oct. 1933. v. 35, no. 5, p. 173-79, illus.)

Contains a description of the nesting habits of *Heteroscelus incanus*, based on author's observations during six expeditions to Alaska. Its main nesting ground lies along the interior base of the Alaska Range from Yakutat Bay to Mt. McKinley; the nests are usually placed on rough gravel bars near the pools of water.

Copy seen: DSI; MH-Z.

34410. DIXON, JOSEPH SCATTER-GOOD, 1884- . Red fox attacked by a golden eagle. (Journal of mammalogy, Aug. 1933. v. 14, no. 3, p. 257)

Contains observations on an attack by a golden eagle upon a cross fox, near the McKinley National Park, Alaska, in July 1932. **Copy seen:** DSI; MH-Z.

34411. DIXON, JOSEPH SCATTER-GOOD, 1884- . Three magpies rob a golden eagle. (Condor, July-Aug. 1933. v. 35, no. 4, p. 161)

Contains an observation made at Igloo Creek in Mount McKinley National Park in Alaska: three magpies (*Pica pica hudsonica*) attacked a golden eagle (*Aquila chrysaetos canadensis*) eating a ground squirrel, and succeeded in carrying off the squirrel.

Copy seen: DLC; MH-Z.

34412. DMITRIEV, A. S. O transpiratsii drevesnoi rastitel'nosti v usloviakh Severa. (Lesnoe khozaistvo, Oct. 1954, no. 10, p. 31-35, tables, diagrs.) Text in Russian. **Title tr.:** On transpiration of trees in conditions of the North.

Results of investigations of transpiration of trees in the taiga zone are discussed, also summarized in the tables. The conclusion is reached that the reforestation of the logged-over areas halts, and even reverses, the process of the soil turning into swamp.

34415. DOBROVOL'SKII, A. D. Otto Evstaf'evich Kofsebu. (In: Lupach, V. S. Russkie moreplavatel'i, 1953, p. 235-49, illus., two text maps) Text in Russian.

Contains an account of the life of this Navy officer, geographer and writer, and of his voyage around the world as head of a scientific expedition on the brig *Rurik*, in 1815-18. In 1816 he reached Kamchatka, then explored the coast of Alaska (discovering Kotzebue Bay) and the Aleutian Islands. In 1823-26 he made another circumnavigation of the globe on the sloop *Predpriiatiie* (*Enterprise*) and visited southeastern Alaska and Kodiak Island. The scientific results of both expeditions were important (especially the oceanographic observations of V. Lents) and numerous islands and atolls were discovered in the Pacific. Kofsebu's published reports are listed as No. 9189-9195 of *Arctic Bibliography*.

Copy seen: DLC; MH.

34416. DOBROVOL'SKII, A. D. S. O. Makarov i ego rol' v razvitiі russkoi okeanologii. (In: Akademiia nauk SSSR. Voprosy istorii otechestvennoi nauki, 1949, p. 372-83) Text in Russian. **Title tr.:** S. O. Makarov and his role in the development of Russian oceanography.

Contains an appreciation of Admiral Makarov's activities as an oceanographer. His observations on the temperature and specific gravity of the Okhotsk and Bering Seas and the Arctic Ocean made during his round-the-world voyage on the *Vihaz'* in 1886-89, and his study of the bottom relief, currents and ice regime in the Barents Sea and in Spitsbergen, Novaya Zemlya and Franz Josef Land waters on the ice-breaker *Ermak* in 1899-1901 are included (cf. *Arctic Bibliography* No. 10759-10760).

Copy seen: DLC; MH.

34417. DOBROVOL'SKII, A. D. Stepan Osipovich Makarov. (In: Lupach, V. S. Russkie moreplavatel'i, 1953, p. 299-316, illus., port., text map) Text in Russian.

Contains a biographical sketch of this famous admiral, oceanographer, inventor, writer and prominent arctic explorer. As commander of the corvette *Vitiaz'*, during her voyage around the world in 1886, he carried out important studies of temperature, specific gravity and currents of the Bering and Okhotsk Seas and Arctic Ocean (cf. *Arctic Bibliography*, No. 10760). When the first icebreaker, *Ermak*, was built under his direction (1897-98), he made a voyage to Spitsbergen in 1899, and another in 1901 exploring the Franz Joseph Land and Novaya Zemlya waters. For his report of these voyages, see No. 10759 of *Arctic Bibliography*.

Notes on the expedition under Prof. N. N. Zubov on the *N. Knipovich* of the State Oceanographic Institute (GOIN) in 1932 to carry out an oceanographic study of northern Barents and Kara Seas during Second International Polar Year. The expedition started on Aug. 18, 1932, from Polyarnyy on the Murman coast, sailed to Victoria Island, then rounded the Franz Joseph archipelago on the north (visiting Rudolf Island, 81° 45' N.) and proceeded to Cape Zhelaniya on Novaya Zemlya. On Sept. 9, the ship sailed to Vize Island, then turned back, reaching Polyarnyy on Sept. 21, 1932. Oceanographic and meteorological observations during this voyage are noted.

34420. DOBROVOL'SKIĬ, I. D. O sobach'em khoziaistve Kamchatskogo okruga. (Ékonomicheskaiâ zhizn' Dal'nego Vostoka, 1927, god 5, no. 11-12, p. 42-50) Text in Russian. *Title tr.:* On the dog-breeding economy in the Kamchatka district.

The importance of dogs as draft animals in the far North is stressed. Kamchatka district, including the Chukotsk and Anadyr' regions, with a population of about 30,000, had 50,000 dogs in 1926-27. Natives' use of high quality fish (salmon), as dog food is uneconomic, but the dogs cannot be replaced entirely by horses, nor reindeer. It is proposed to use the less valuable fish products for dog food; to decrease the number of dogs, but improve their quality by favoring the purebred Kamchatka dog of high ability, and by improving the veterinary care of the dogs.

34423. DODT, EBERHARD. Differential thermosensitivity of mammalian A-fibres. (*Acta physiologica scandinavica*, 1953. v. 29, no. 1, p. 91-108, illus. table) 18 refs.

Contains a study of responses in specific cold, warm and mechanoreceptive fibers to thermal stimulation of the tongue surface and of the lingual nerve respectively. Though differences were found in patterns of response of fiber types, the results indicate that direct excitation of nerve fibers plays an insignificant role in temperature sensation.

COPY seen: DSG.

34424. DODT, EBERHARD, and others. The effect of cholinergic substances on the discharges from thermal receptors. (*Acta physiologica scandinavica*, 1953. v. 28, no. 2-3, p. 101-114, illus.) 15 refs. *Other authors:* A. P. Skouby and Yngve Zotterman.

Experiments with cats revealed that minute amounts of acetylcholine shift the temperature range of steady discharge in cold fibers towards the warm side and increase the rate of discharge within the normal range of temperature. Larger doses caused a depression of the steady discharge and a narrowing of the temperature range recorded. Menthol showed a similar effect.

possibilités de l'association hypothermie-circulation extra-corporeale. (*Lyon chirurgical*, Jan. 1954. v. 49, no. 1, p. 19-24) 31 refs. Text in French. Summary in English. **Title tr.:** Physio-pathologie bases of hypothermia and the possibilities of combining hypothermia with extra-corporeal circulation.

Contains an account of functional changes taking place when the body temperature is lowered in homoiotherms. Also description of a method applied by the authors in obtaining hypothermia for surgical purposes.

COPY seen: DSG.

34427. DOGLIOTTI, ACHILLE MARCO, and E. CIOCATTO. Les bases physiopathologiques de l'hypothermie et les possibilités de l'association hypothermie-circulation extracorporelle: notre expérience. (*Schweizerische medizinische Wochenschrift*, Aug. 1953. Jahrg. 83, nr. 31, p. 707-710, 2 fig., 2 tables) 30 refs. Text in French.

Title tr.: Physio-pathologic bases of hypothermia and the possibility of an association between hypothermia and extracorporeal circulation; our experience.

Having outlined the manifestations of mammalian organisms submitted to hypothermia, the authors present a method of rapid chilling. Hypothermia down to 26° C. is attained and followed by rapid rewarming. Experimental and clinical surgery of the heart and the central nervous system performed with the aid of hypothermia by the authors is discussed and extra-corporeal circulation in this connection envisaged.

34428. DOĀRENKO, E. Po Karskol tundre; iz zapisok botanika. (*Nasha strana*, Mar. 1940, no. 3, p. 19-23, 5 illus., text map) Text in Russian.

Title tr.: In the Kara tundra; from the notes of a botanist.

Contains a popular account of a summer trip of four specialists and twelve workers to survey reindeer pasturage. The party traveled by reindeer sledge (five) with Samoyed guides from Salekhard to the Shechuya River, thence to the northern ranges of the Polar Ural and through the basin of the Kara River and its numerous tributaries, to Kara, a trading center on Baydaratskaya Guba; they returned to Salekhard by approximately the same route. The specialists' task was to study the reindeer pastures of the region with a view to their division,

according to a certain plan, later, among the Samoyed reindeer-keeping kolkhozes. Mapping of tundra vegetation and some topographical surveys were carried out. Plant life and morphology of the Ural are noted briefly. The daily life of the Samoyeds is described; their birch-bark tents, clothing and its ornamentation, use of calendar sticks and property marks. The oral communication of news in the taiga, cemeteries, Minisey or the holy mountain of Samoyeds and Ostyaks on the Kara Sea, etc., are mentioned. Reproductions of five paintings by V. Beliaev embellish the article.

34442. DONTENWILL, WALTER. Über die Beeinflussung der Reaktion des arteriellen Gefäßsystems bei localer Gefrierung durch Antihistaminica und durch die ganglienblockierende Substanz Pendiomid; gleichzeitig ein Beitrag zur Pathogenese der Erfrierung, II. (Virchows Archiv, 1953. Bd. 323, Heft 5, p. 553–62, illus.) 16 refs. Text in German. **Title tr.:** The effect of antihistaminics and of a ganglion-blocking substance Pendiomid

on the reaction of arterial vessels in local freezing; also a contribution to the pathogenesis of frostbite, II.

Contains a study of rabbits first treated with said methods and subsequently exposed to controlled injuries on the ear. The experiments were to solve the problem whether vasoconstriction and circulatory disorders or direct tissue injuries are responsible for the damage. Both histamine and direct cold injury were found to be main pathogenic agents, and their action is discussed.

Copy seen: DSG.

34443. DORAN, PHILIP C. Electronic trilateration, Bering Sea area. (Canadian surveyor, July 1953. v. 11, no. 5, p. 55–59, text map)

Measurement of distance by shoran and by Electronic Position Indicator System (EPI) is described. Problems encountered by the U. S. Coast and Geodetic Survey in connecting the Pribilof Islands (St. Paul and St. George), St. Matthew Island, and St. Lawrence Island to the Alaskan mainland in a trilateration network are discussed, and some resulting data are given. Position of St. Lawrence Island was determined by shoran; other distances were determined by EPI measurements.

34444. DORSEY, HERBERT GROVE, Jr., 1912–, Elmendorf Weather Central, Alaska. (Polar record, Jan. 1954. v. 7, no. 47, p. 72)

This branch of U. S. Air Force, Air Weather Service, is located at Elmendorf Air Force Base near Anchorage. Formed in Nov. 1949 (as Arctic Weather Central, to 1951) it supplements work of the U. S. Weather Bureau and acts as coordinating center for meteorological reports to and from U. S. A. F. weather stations in North America and Greenland. The Analysis Division provides route and terminal forecasts at regular intervals and special forecasts as required, while the Evaluation Division analyses synoptic weather reports.

Certain skeletal characters of known Pacific Miocene genera of Otariidae reveal "primitive" conditions as compared with later otarids. Distinguishing morphological characters are listed. Attributes of forelimbs indicate probably less specialized adaptation for swimming than is true of geologically later otarids. Evidence assists in interpreting geologic age of pinipeds and their containing strata at epoch and to a lesser extent at a stage or age level.

Northwest Coast. (California. University. Anthropological records, 1950. v. 9, no. 3, p. i-iv, 157-294, illus., tables) Mimeographed. 24 refs.

Contains a survey of the cultures of 17 ethnic groups of the coasts of British Columbia and Southeast Alaska, including Tsimshian, Haida, and Tlingit. Field work was done in 1936-37, and funds were provided by the University of California. 1797 cultural elements were surveyed and results are presented in tabular form. Ethnographical notes and explanations are included on fishing and hunting, food and cooking, structures, navigation, tools and weapons, clothing, basketry, musical instruments, games and amusements, calendar, customs of the life cycle, society, religion and ritual, shamanism, secret societies, potlatches and finances. Among the native informants were seven Tsimshians, three Haida and four Tlingit men and women.

34455. DRURY, WILLIAM H., Jr. The cyclic development of bog flats in interior Alaska. Thesis submitted in partial fulfillment of the requirements for the degree of Doctor of Philosophy in the Department of Biology, Harvard University. Cambridge, Mass., May 1952. viii, 87, 73, 42 p., 42 illus., 3 text maps, 11 diagrs. Typescript. 58 refs.

"The development, appearance and subsequent history of peat bogs [in the upper Kuskokwim River basin, 62°-63°30' N. 154°-156° W.] are discussed with particular emphasis on the effects of frost action on both the development of vegetation associations and the geological process of bog growth. Under present climatic conditions there occurs a cyclic creation and destruction of three phenomena: permafrost, muskeg forests of black spruce and *Sphagnum fuscum*, and quaking bogs of peculiar vegetation patterns. Frost effects in vegetation patterns on bog surfaces are also described."

—SIPRE. Vegetation of the Alaskan

bog flats closely corresponds to that in arctic and boreal Europe. Relation of Finnish research to this Alaskan study is discussed.

Reprint of one section of report of the March 1953 Conference of the British Road Research Laboratory held at Inverness, Scotland (private publication), much of its information appearing relevant to corresponding Canadian problems with muskeg. Problems are discussed and recommendations made for construction of low-cost roads to carry light traffic, or for temporary access roads for civil engineering projects. Uniformity of road design and of water content of the peat is stressed. Requirements for new construction are listed and maintenance of roads is discussed. Problems encountered in specific localities in Scotland are described.

34473. DUNBAR, MAXWELL JOHN, 1914-. A note on climatic change in the sea. (Arctic, June 1954. v. 7, no. 1 p. 27-30) 12 refs.

Strong increase in temperature and water transport in the Gulf Stream -

North Atlantic Drift system during the recent climatic amelioration (1915 to about 1945) has been most effective in the northeastern part of the system (Iceland, Faeroes, Barents Sea, Svalbard) and West Greenland. Increase in flow of Atlantic water northward is, however, balanced by increased southward flow of polar water. East Greenland and the Canadian Eastern Arctic, influenced by the polar outlets, have undergone little warming. A short period of climatic warming in the 1880's had more effect on the Ungava Bay region, and probably the whole Eastern Arctic, than the recent fluctuation. Biological evidence of this earlier warming is discussed. A lesser increase in current transport may have been involved than in the recent climatic amelioration.

34474. DUNBAR, MAXWELL JOHN, 1914- . The status of the Atlantic walrus, *Odobenus rosmarus* (L) in Canada. [Montreal], June 1954. 6 p. Mimeographed.

Paper sent to the Danish Nature Conservancy, Copenhagen, for discussion at the annual meeting, June 1954. The rapid restriction of range in historic times and the present continuing decline of the Atlantic walrus are discussed: a primary factor may be wasteful Eskimo hunting methods since introduction of the rifle; great loss of animals is due to escape of mortally wounded and sinking of the dead before they can be harpooned. Methods of supervising the annual walrus hunt are being worked out by the Canadian Dept. of Northern Affairs, and basic research on biology of the walrus is being undertaken by the Canadian Wildlife Service.

Contains a study of three methods of production of hypothermia (in dogs) by: (1) deep anesthesia; (2) curarization; (3) the "lytic cocktail." Oxygen intake, pulse and respiratory rate were studied in conjunction with drop of temperature. All three methods appear to be equally effective.

34478. DUNGAL, NIELS. Some peculiarities in the geographical pathology of Iceland. (Schweizerische Zeitschrift für allgemeine Pathologie und Bakteriologie, 1953. v. 16, no. 3, p. 634-43) 11 refs.

Following an introductory part on the improvement of health, especially in echinococcosis, leprosy, tuberculosis, typhoid, etc., on the island within the past 50 years, the author presents some peculiarities observed in 2200 autopsies made within two decades. The smallness of the thyroid; good condition of arteries in older people; the rarity of rheumatic heart lesions, diabetes, liver cirrhosis, etc., are pointed out and responsible factors (diet, climate, etc.) discussed.

Copy seen: DSG.

34479. DUNLOP, HARRY ADAM, 1898- . The effect of fishing upon the stocks of Pacific halibut. (*In: United Nations Scientific Conference on the Conservation and Utilization of Resources, Lake Success, N. Y., 1949. Proceedings, v. 7, Wildlife and fish resources*, pub. 1951, p. 16-20, 2 graphs) 15 refs.

Commercial fishing for halibut off the Pacific Coast of North America began about 1890 off southern British Columbia, moving northward into the Gulf of Alaska and Bering Sea after 1920. The periods of unrestricted fishing prior to 1930 and of regulated fishing from 1930 to 1948 are discussed. Reduction in fishing intensity has increased the abundance of the halibut; the catch per skate in the Alaskan area in 1948 was about 80 percent greater than in 1930.

34480. DUNN, FRED L. Avalanches, blizzards, and crevasses. (*Alaska sportsman*, Apr. 1953. v. 19, no. 4, p. 6-13, 16 illus.)

Popular account of mountaineering on Mt. McKinley, Alaska. A brief history of various expeditions from 1913 to 1951 is given. In summer 1952, 29 men in five different parties (two Alaskan, two Mexican, one New England) attempted to climb the mountain. One Mexican expedition (led by E. de Maria y Campos) and one Alaskan expedition (led by W. Hackett) reached the summit. The climb by the New England party of five (led by the writer) to 19,500 ft. is described in detail, with notes on experiences of the other groups.

34485. DUTILLY, ARTHÈME ANTOINE, 1896- , and others. Contribution à la flore du versant occidental de la Baie James, Ontario. Washington, D. C., 1954. 144 p. illus., 17 text maps. (Catholic University of America. Arctic Institute. Contribution no. 5F) 66 refs. Text in French. *Other authors:* E. Lepage and M. G. Duman. *Title tr:* Contribution to the flora of the western slope of James Bay, Ontario.

Contains results of observations made and study of specimens collected in 1946 and 1952 along the Albany, Attawapiskat, Lake, Eabamet, and Marten-Drinking Rivers, and in 1953 along the coast from Cape Henrietta Maria to Moosonee. A floristic summary is given

for each area visited. Four phyto-geographic zones are recognized: (1) arctic zone—Cape Henrietta Maria region at the northern end of the Bay; (2) coastal zone—the saline and brackish area bordering the Bay; (3) Paleozoic interior zone; and (4) Precambrian zone. Typical species are listed for each zone, followed by an annotated list of species (by families) with locality found and names of collectors, also occasional notes on habitat and distribution. An alphabetical index to families, genera, and species is appended.

34488. DWIGHT, JONATHAN. Reasons for discarding a proposed race of the glaucous gull, *Larus hyperboreus*. (Auk, Apr. 1919. v. 36, no. 2, p. 242-48, illus.)

Contains a critical examination of the status of *Larus hyperboreus barrovianus*, native to Greenland and Alaska. This subspecies, discarded in 1910 by the Committee on Nomenclature and Classification, was revived in 1918 by H. C. Oberholser. The author comes to the conclusion that *barrovianus* is not a valid race.

Copy seen: DSI; MH-Z.

34489. DWIGHT, JONATHAN. The status of "Larus thayeri, Thayer's gull." (Auk, Oct. 1917. v. 34, no. 4, p. 413-14, plate 15)

Contains a taxonomic study of a new arctic gull from Ellesmere Land described by W. S. Brooks as *Larus thayeri* (cf. *Arctic Bibliography*, No. 2287). It is recognized as a geographical race of the herring gull and should stand as *Larus argentatus thayeri*, Thayer's herring gull. The *thayeri* seems to be the common form throughout the Canadian Arctic Islands; it winters chiefly on the Pacific Coast (British Columbia).

Copy seen: DSI; MH-Z.

34490. DYBING, FRED. The blood alcohol curve in hypothermia. (Acta pharmacologica et toxicologica, 1945. v. 1, p. 77-81, illus. tables) 7 refs.

Contains an account of experiments with rats given intravenously ethyl alcohol in physiological saline (2 g. per kg. body weight). In hypothermic animals the fall of blood alcohol per time unit was considerably slower than in non-cooled controls; this is assumed to be due to slower oxidation of the alcohol in the hypothermic rats.

Copy seen: DSG.

34491. DYCE, R. Auroral echoes of fifty megacycles obtained at College, Alaska. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 375)

Contains abstract of paper presented at 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. CW and pulse methods were used to study returns from the aurora at 50 mc./sec. during summer 1953, near the center of the auroral zone (64°51' N. 147°50' W.). VHF echoes were obtained only from azimuth angles within 60° of magnetic north and with ranges of 200-900 km. Most echoes originated far north of the zone of maximum auroral activity. Data support view that strongest echoes will be obtained when looking roughly perpendicular to the earth's magnetic field.

34499. EAKIN, HENRY MINER, 1883-1936. Exploration in the Cosna-Nowitna region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 211-21, fig., fold. map)

Presents the results of a geologic field investigation by the author in 1915 of the Cosna-Nowitna region (approx. 65° N. 153° W.) in the Yukon-Tanana basin in central Alaska. The relief, drainage, forests and vegetation, fish and game, inhabitants, routes of travel, the general geology, and the economic geology are described. Auriferous mineralization is not evident in the rocks in place, but placer gold has been found on several creeks of the region. Author's later bulletin on the region is *Arctic Bibliography*, No. 4288.

Copy seen: DLC.

34500. EAKIN, HENRY MINER, 1883-1936. Gold placer mining in the Porcupine district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 93-100, fold. map)

Presents the results of a field examination in 1916 by the author of the Porcupine gold placer district at the headwaters of the Chilkat River at the northern end of Southeast Alaska, 40 miles northwest of Haines on the Lynn Canal. Describes the previous geologic work in the district, the topography, erosional history, geology, mineralization and placers. Covers also the history of mining development and summarizes the mining operations of 1916. Author's bulletin on this field work is *Arctic Bibliography*, No. 4292.

Copy seen: DLC.

34501. EAKIN, HENRY MINER, 1883-1936. Gold placers of the Innoko-Iditarod region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 293-303)

Presents results of a geologic reconnaissance in 1912 of the Innoko and Iditarod districts which lie north of the Kuskokwim River in west-central Alaska. Author states that while these two districts have many points in common they

also have differences which warrant their separate treatment. Descriptions are given of the geography, general geology, the gold placers and gold lodes, and the mining developments in 1912 of each district. Both are shown on the folded map included with the author's report on the Ruby district *infra*. Subsequent report covering both regions is *Arctic Bibliography*, No. 4290.

Copy seen: DLC.

34502. EAKIN, HENRY MINER, 1883-1936. Gold placers of the Ruby district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 279-92, fold. map)

Describes the geography, general geology, and economic geology. Gold placers are the only mineral deposits of economic value. Descriptions are given of the gold placer deposits on the different creeks and of the mining operations on six creeks in 1912. *Map* covers also the Innoko-Iditarod region.

Copy seen: DLC.

34503. EAKIN, HENRY MINER, 1883-1936. Iron-ore deposits near Nome. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 361-65)

Describes an iron ore district about 25 miles northwest of Nome, on Seward Peninsula, visited by the author in July 1914. A summary of the geography and geology of the district is given, with descriptions of the individual claims.

Copy seen: DLC.

34504. EAKIN, HENRY MINER, 1883-1936. Lode mining in the Juneau gold belt. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 77-92, fold. maps)

Describes the developments in 1916 in the lode mines of the Juneau gold belt—on Douglas and Admiralty Islands and on the mainland from Berner Bay to Taku Inlet.

Copy seen: DLC.

34505. EAKIN, HENRY MINER, 1883-1936. Mineral resources of the Yukon-Koyukuk region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 371-84, fold. map)

Presents the results of a field examination by the author in 1913 of the geography, geology and mineral resources of the region westward from the Yukon

Flats between the Yukon, and the Koyukuk in west-central Alaska. The mineral resources include gold lodes and placers, and a silver-lead lode. The gold lode, now abandoned, on the Yukon about 20 miles below Tanana, was opened about 1890, and is said to have been the first lode mine to be opened in the interior of Alaska. The Indian River gold placers are described. Full report from this fieldwork is *Arctic Bibliography*, No. 4293.

Copy seen: DLC.

34506. EAKIN, HENRY MINER, 1883-1936. Mining in the Fairbanks district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 229-38)

Presents a summary of the mining developments in 1914 in the gold lode and placer mines and prospects in the Fairbanks district in central Alaska, result of a visit by the author to that district in August of that year.

Copy seen: DLC.

34507. EAKIN, HENRY MINER, 1883-1936. Mining in the Hot Springs district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 239-45)

Describes the gold placer mining operations in 1914 in the Baker Creek area, the Sullivan Creek basin, and the American Creek area. The Sullivan Creek placers contain tin as well as gold, and this was recovered at some mines on Miller Gulch.

Copy seen: DLC.

34508. EAKIN, HENRY MINER, 1883-1936. Mining in the Juneau region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 95-102)

Describes the gold lode mining developments in 1914 in the Juneau region of Southeast Alaska. **Copy seen:** DLC.

34509. EAKIN, HENRY MINER, 1883-1936. Placer mining in Seward Peninsula. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 366-73)

Describes the general progress in mining on Seward Peninsula in 1914, followed by statements of the developments in various districts.

Copy seen: DLC.

34510. EAKIN, HENRY MINER, 1883-1936. Placer mining in the Ruby district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 363-39)

Describes the 1913 field work of the author and previous investigations in the Ruby gold placer district in west-central Alaska. Discusses the general operating conditions, and the mining developments on creeks previously productive and on the new productive creeks.

Copy seen: DLC.

34511. EAKIN, HENRY MINER, 1883-1936. The Rampart and Hot Springs regions. (In: U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 271-86, fold. map)

*Describes the geography, transportation, general geology, and economic geology of the greater part of the triangular area between the Yukon and Tanana Rivers west of 150° W. long. in central Alaska. The mineral resources include deposits of gold, tin, and lignite. Only gold is recovered profitably. Small quantities of tin ores are obtained in the Hot Springs district incidental to gold mining. Thin lignite beds occur in the Eocene deposits near Rampart. The occurrences and developments of the gold and tin placers are described. Based on author's reconnaissance in 1911; his bulletin on the area is listed as *Arctic Bibliography*, No. 4289.*

34515. EATON, HERBERT NELSON, 1892- and R. S. WYLY. Frost closure of roof vents in plumbing systems. Washington, D. C., Oct. 25, 1954. 31 p. illus. tables, graphs, diagrs. (U. S. National Bureau of Standards. Building materials and structures report 142)

Plumbing system roof vents sometimes become partially or completely closed by frost accumulations during very cold weather in the northern U. S., Canada, and Alaska. An experimental investigation of this phenomenon was made as

part of a broad investigation of building drainage systems, the physics of the closure of vents by frost being emphasized, rather than the effects on the drainage system. An analysis is made of the heat-transfer process that leads to partial or complete closure of vents by frost under sufficiently severe conditions. Recorded observations of frost closure under service conditions in Canada for six- and eight-inch vents were found to agree closely with predictions of the laboratory analysis. The study indicates the desirability of keeping the extension of the vent above the roof as short as practicable, of increasing the diameter of the roof vent one or two sizes over the stack diameter, and of using insulating materials around the roof vent in areas where extremely cold weather may be expected. **Copy seen:** CA:MAI; DBS.

34516. ECONOMIST. Spies in the Arctic. (Economist, June 12, 1954. p. 903-904)

Political and economic reasons for the high Communist vote in the northernmost Norwegian province of Finnmark (15 percent compared with five percent for all of Norway) and in Finnish Lapland (33 percent compared with 21 percent for all of Finland) are considered. The strategic significance of this region with regard to air routes and radar installations is stressed. Ten Finns were detained by the police on the eastern frontier and seven Norwegian spies were tried and convicted at Kirkenes in northern Finnmark in May 1954. The existence of an integrated espionage network in the North is suggested.

34519. EDERER, BERNARD FRANCIS, 1900-. Through Alaska's back door. New York, Vantage Press, 1954. 162 p. illus., maps on endpapers.

Contains popular account of a 3,400-mile canoe trip in summer 1939 by the author (a dentist in western Canada) and companion. They traveled down the Athabaska, Slave, and Mackenzie Rivers to the Arctic Ocean, then west via the Rat River, through McDougal Pass in the Richardson Mts., down the Little Bell, Bell, Porcupine Rivers to Fort Yukon (with visit to Fairbanks), up the Yukon to Whitehorse, by rail to Skagway, and by canoe to Juneau. Party's equipment and supplies, distances, etc. are listed at end. Reviewed by D. Leechman in *Beaver*, Autumn 1954, Outfit 285, p. 57.

In cold environment, shivering was absent or ineffective during the first 7-10 days after birth. Also a rapid drop of rectal temperature was observed the first few days of life, but became progressively slower with age and remained "fairly constant" two or three weeks after birth. Conditions in hot environment are also discussed.

34525. EFREMOV, V. S. Vilkulskie krest'iane; stranichka iz istorii kolonizatsii Sibiri; iz fakul'skikh arkhivov. (Sibirskii sbornik, 1904. p. 163-219) Text in Russian. *Title tr.:* The peasants of Vilyuysk; a page from the history of colonization in Siberia, from the archives in Yakutsk.

In 1848, 59 families of Russian peasants were moved by the administration from Vilyuysk to Nyurba ($63^{\circ}17' \text{ N. } 118^{\circ}20' \text{ E.}$) and settled as a farming community. The Russian colonists came under the influence of the native Yakut population and by 1896 of the 40 "Russian" families who remained in this community, 26 did not speak Russian and 27 individuals showed physical features typical of the Yakuts. The story of this attempt at colonization is told in considerable detail with quotations from documents. The economic, moral and cultural condition of the peasants is characterized; role of the administration, also the colonists' relations among themselves and with the Yakuts are described. Mention is made (p. 184-85) of an attempt by the administration in 1848-49 to introduce a compulsory communal system of working the land (so-called serfdom-socialism), a type of state farm collective, the colonists' resistance to the idea and their preference for the farm work to be done on an individual family basis is also noted.

34526. EFREMOVA, A. Olekminskii raion. (Sovetskoe kraevedenie, Aug. 1935, no. 8, p. 66-72, 4 illus.) Text in Russian. *Title tr.:* The Olekminsk Region.

Contains a general description of this region on the Lena between 59° and $62^{\circ} \text{ N. lat.}$, inhabited by Yakuts, Russians and Tungus. Details are given on surface features, rivers, climate, forests and animal life, minerals including gold, agriculture and cattle breeding, hunting, lumbering, river transport, trade, schools and other cultural institutions. The total population at that time (1935) was 15,500, 58.9 percent Yakuts, 36.5 percent

Russians, 3.9 percent Tatars, and some 20-30 families of Tungus, nomadizing on the Chara River.

34527. EGEDAL, JOHANNES 1891- Tidal observation in Greenland in the years 1934-1951. (In: Denmark. Meteorologiske Institut. Nautisk-meteorologisk årbog, 1952, pub. 1953. Appendix, p. 1-10, 7 tables)

Tidal observations were established at Godhavn on July 12, 1934 and terminated Nov. 15, 1951. Readings were usually taken from June to Nov., but were continued in winters 1945-1946 and 1950-1951. Observations at nine other West Greenland stations were made between 1946 and 1951: Nanortalik, Julianehaab, Frederikshaab, Godthaab, Sukkertoppen, Holsteinsborg, Egedesminde, Jakobshavn, Umanak. Methods are described, and annual and monthly data presented in tables. Systematic observations were made mainly by the Danish Geodetic Institute and Danish Meteorological Institute, assisted by the Greenland Dept. and Greenland Navy Command. After 1951, tidal observations will be made at Upernavik, Kaulshavn, and Godthaab on the west coast and Angmagssalik and Scoresby Sund on the east coast. All readings will serve as future bases for determination of vertical movements of Greenland.

34529. EHRlich, ALBERT. Note on local winds near Big Delta, Alaska. (American Meteorological Society. Bulletin, Apr. 1953. v. 34, no. 4, p. 181-82, text map, graph)

Numerous periods of strong local winds forming a sort of surface "jet stream" cause an average annual wind speed at Big Delta (64°10' N. 145°50' W.) 10-15 knots higher than in the Fairbanks region, 75-100 miles to the northwest. Winds are from two directions: (1) east-southeast (frequent in fall, winter, and spring); (2) south-southeast (at any season but spring, summer, and fall especially). Opportunities for field research on winds in this region are noted.

34531. EIDE, ARTHUR HANSIN. Drums of Diomedé; transformation of the Alaska Eskimo. Hollywood, Calif., House-Warven, 1952. 242 p. 16 plates.

Contains an account of author's experiences as a U. S. Government agent and teacher with the Little Diomedé Island Eskimos. A native of Tromsø in Norway, he married an Eskimo girl born at Point Barrow and educated in the U. S., and both went to the island in 1910. A vivid picture is given of day-to-day life in the village, the problem of food supply and of the impact of customs, beliefs and skills of native and white upon each other. Several Eskimo types are described, the character of the people, their sea-hunting technique and equipment, feasts with dances, the trading of wives, the whale festival, burial rites, etc. The activity and influence of the medicine-man, opposition to the Whites is discussed, and the native's difficult way to civilization presented with insight. **Copy seen:** DLC.

34532. EIGENMANN, CARL H., d. 1927, and C. H. BEESON. A revision of the fishes of the subfamily Sebastinae of the Pacific coast of America. (U. S.

National Museum. Proceedings, Nov. 15, 1894. v. 17, no. 1009, p. 375-407)

Contains historical notes on the viviparous genera of the subfamily Sebastinae and analytical keys to the genera and species. Fifty-two species are listed systematically, with synonyms, references, and data on habitat and distribution. An historical list of species and their present equivalents, also a list of the species based upon the present revision, are added. At least four species occur in the Gulf of Alaska and southern Alaska waters. **Copy seen:** DLC; MH-Z.

Contains report of experiments made in the course of hydrographic work in waters north of Iceland to supplement data of Hermann and Thomsen (q. v.) 1891-1939. During 1947, 380 bottles were liberated, and 71 of them recovered; in 1949, 480 and 59. Places of launching and probable initial drift direction of the bottles, with number of drift days and area of stranding are shown in maps and discussed. Conclusions are offered as to currents in the Greenland Sea, Denmark Strait, and North Atlantic Ocean, and a schematic map given.

34539. ÉKSPEDITSIĀ SSSR NA SEVERNYĬ POLŪS, 1937. Translated abstracts from "Reports of the drifting station 'North Pole,'" vol. I, parts 1-5, vol. II, parts 1-2. Los Angeles, June 1954. 60 p. diags., 3 tables. Mimeographed. (California. University. Dept. of Meteorology. [Arctic Meteorological Research]. Scientific report, no. 5. Contract AF 19(122)-228) 11 refs.

English summaries edited by A. D. Belmont which attempt to present the most important information in v. I and the first two parts of v. II of *Arctic Bibliography*, No. 4476. Original Russian papers were separately analyzed as *Arctic Bibliography*, No. 15956, 13103, 15906, 9317, 4832, 4836, and 4280. These translations are fifth in a series of seven reports from the U. C. L. A. Arctic Project (directed by J. Bjerknes), initiated in Oct. 1950. **Copy seen:** DWB.

34540. EKSTROM, T., and others. On the effect of local stimulation by cold on the adrenalin secretion. (Acta physiologica scandinavica, 1943. v. 6, p. 52-61, illus. tables) 17 refs. Other authors: N. Lundgren and C. G. Schmiterlów.

Contains a study of adrenalin secretion in rabbits, following local cold stimulation of the skin. With intact innervation of the skin, adrenalin secretion increased during cold stimulation even if body temperature was kept constant. This effect was not produced if innervation to the cooled skin area had been cut off, after section of the spinal cord, or after lumbar anesthesia. The effect of local cold stimulation on the adrenal thus represents a reflex.

34541. ELBO, JOHN GREGER ROS-ENSTAND, 1922-1954. The Norwegian-Finnish reindeer fence. (Polar record, Jan. 1954. v. 7, no. 47, p. 73-74)

Contains brief historical review of the treaties and conventions between Norway and Finland regarding fences to prevent the movement of reindeer across the frontier. Regular annual migrations of Lapps and their herds between the countries ceased when the Russians closed the Finnish frontier Sept. 15,

1852. Frequent trespassing since that time has been a source of friction. Conventions were signed Nov. 5, 1936, and Sept. 10, 1948. The latest, signed Mar. 18, 1952, specifies reindeer fences along the entire common frontier (except Angeli to Polmak) by 1957. The construction is being supervised by a joint five-man committee. The fences are briefly described.

34545. ELIADE, MIRCEA, 1907- . Le chamanisme et les techniques archaïques

de l'extase. Paris, Payot, 1951. 447 p. about 300 refs. **Title tr.:** Shamanism and the ancient techniques of ecstasy.

A study on shamanism from the psychopathologic and ethnologic aspects. Influence of diseases and dreams, the role of voluntary ecstasy, the acquisition of shamanistic powers, vocation and process of initiation, symbolism of costume and drum, shamanistic technique, cosmology, myths and rites are discussed. Shamanistic practices in northern and central Asia, in both Americas, Southeast Asia and the Pacific area, in India, Tibet, China and among the ancient Indo-Europeans are characterized. Such among the Tungus, Yakuts, Samoyeds, Ostyaks, Lapps, Paleo-Siberians are described with comments (p. 223-34), also among American Eskimos (p. 261-69) and other peoples. Relationships of shamanism with magic and belief in a Supreme Being is considered. Siberia is stated to be the "classic" land of shamanism; its practice, however, is not confined exclusively to a certain region, e. g., northern or central Asia. It is rather a universal and complex phenomenon: an archaic technique of attaining ecstasy, traveling in a trance to "heaven" and coming into immediate communication with the Supreme Being.

34548. ELLIS, FRANK H. Canada's flying heritage. Toronto. University of Toronto Press, 1954. xiv, 388 p. illus., diagrs.

A pioneer pilot's chronicle of the beginnings and development of Canadian aviation, with numerous photographs, reminiscences and data collected over many years. Use of aircraft in the North is treated extensively. The first Alaskan Air Expedition of 1920 is described (p. 187-92). Bush flying and arctic flights are dealt with (p. 197-262), including the first commercial flight in the North 1920; history of three airplanes, *Rene, Vic* and the *Viking* which operated in the bush country during the 1920's; the aerial seal patrol; establishment of an air strip on the southern coast of Ellesmere Island in 1922; the Hudson Strait Air Expedition and Survey, 1927-1928, etc. Exploits of Canadian bush pilots and commercial flying, and various air rescue operations in the far North are recounted. Also described are attempts to fly the Atlantic by the Greenland-Iceland route (p. 272-84); first air mail flights to Yukon and Northwest Territories (p. 318-22); use of aircraft by the Royal Canadian Mounted Police, aerial search for the Burke party in the Yukon 1930, Burwash Expedition to King William Island 1930; use of planes in other scientific expeditions, in mercy flights, by the Hudson's Bay Co. and Imperial Oil Co., etc. (p. 327-40). A chronology of Canadian aviation, air mail events to 1939, and record of air trophy awards (with portraits of recipients) are appended. Reviewed by W. Gilbert in the *Beaver*, Spring 1955, Outfit 285, p. 56-57.

34549. ELLIS, FRANK H. The North can be tough; many men have been lost in Canada's North, which is merciless to those who are defenceless—this is the story of one of the most extensive searches for lost fliers. (Canadian aviation, Oct. 1945. v. 18, no. 10, p. 66-67, 100, 103, 128, illus.)

Detailed account of the search for E. J. A. "Paddy" Burke, Emil Kading,

and Robert Martin, forced down in their float-equipped Junkers CF-AMX on the icebound Liard River, near the Yukon border on Oct. 11, 1930. The party was rescued on Dec. 10, 1930 by Everett Wasson and Joe Walsh flying the Tredwell Yukon Company's aircraft *Claire*. Burke had died of starvation on Nov. 20. Another party of three searchers lost their lives when their plane crashed into the sea somewhere between Butedale and Prince Rupert.

Copy seen: DLC.

34550. ELLIS, FRANK H. Who flew first? (Canadian aviation, Sept. 1953. v. 26, no. 8, p. 38-39, 121-32, illus.)

One of a series of historical articles dealing with Canadian aviation. Discusses first flights made in Western Canada (p. 38, 124-32) and in the Canadian Arctic (p. 39, 121-24, 2 illus.). The U. S. Naval Air Unit consisting of three single-engined, Loening amphibious aircraft, is credited with the first flights over the Canadian Arctic on Aug. 8, 1925. The unit was commanded by R. E. Byrd and accompanied the MacMillan Expedition. Based at Etah, Greenland, the aircraft flew across Smith Sound, passing directly over Cape Sabine. The first landing in the Canadian Arctic was made at sea in Hayes Fjord on Aug. 12, 1925 by the same aircraft on a flight from Etah to Ellesmere. The use of short-wave radio aboard the S. S. *Peary* during the MacMillan Expedition upon the suggestion of Eugene F. MacDonald, Jr. is discussed.

Copy seen: DLC.

34551. ELLIS, FRANK H. Wings across Greenland. (Beaver, Mar. 1954. Outfit 284, p. 18-21, 4 illus.)

Contains description of three attempted flights across the Atlantic by way of northern Quebec, Greenland and Iceland. 1928-1931. P. D. Cramer and B. R. J. Hassell reached the west coast of Greenland in mid-Aug. 1928, but were forced to abandon plane on the icecap. Cramer, R. H. Gast, and R. Wood reached Port Burwell on Hudson Strait on July 9, 1929. There their aircraft sank among icefloes during a storm on July 13. In late Aug. 1931, Cramer and O. Paquette succeeded in flying from Detroit across Greenland and the North Atlantic to the Shetland Islands, but the plane and men were lost in a storm before reaching Copenhagen.

34553. ELLITSGAARD-RASMUSSEN, K. Meteoric shower in North East Greenland? (Dansk geologisk forening. Meddelelser, 1954. Bd. 12, hefte 4, p. 433-35, illus., text map) 3 refs. *Also pub. as:* Copenhagen. Universitet. Mineralogisk-geologiske museum. Communications géologiques, no. 63, p. 433-35.

Dark spots and rings of varying sizes were seen on a red sandstone plateau between Independence Fjord and Hagens Fjord, North Greenland (approx. 81°45'-82° N. 28°-29° W.). The features were seen from the air at a height over 800 meters during a flight from Zackenberg Bugt in East Greenland to the Danish Peary Land Expedition's base at Jørgen Brønlands Fjord. They may be traces of a shower of meteorites.

34554. ELLITSGAARD-RASMUSSEN, K. On the geology of a metamorphic complex in West Greenland; the islands of Anarssuit, Isuamiut, and Eqûtit.

København, C. A. Reitzel, 1954. 70 p. illus., 3 maps (1 fold.), diagrs. tables. (Meddelelser om Grønland. Bd. 136, nr. 6) 38 refs.

The small island groups, examined in summer 1948 for the Geological Survey of Greenland, belong to the skerry archipelago in southern Disko Bay, 68°45'-47' N. 52°33'-45' W. Although the islands are on the northern flank of the Precambrian Nagssugtoq orogenic region, metamorphism has here been so slight that a fairly accurate determination of the genesis of the rocks is possible. Two main rock groups exist: (1) a greenstone (amphibolite) series of magmatic origin, and (2) mica schists of sedimentary origin which are intruded by the greenstones. The folding conditions and intrusion mechanism are briefly discussed, petrographic descriptions given (in detail) of rocks in the two groups, also (briefly) of pegmatites (found only on Isuamiut and Eqûtit), believed to be residual products from recrystallization of the greenstones.

Describes the gold placer mining conditions and mining operations in 1909 in the Fairbanks, Circle, Rampart, Hot Springs, Fortymile and Eagle, and the Salchaket-Tenderfoot districts, with historical tables showing the gold production in each district.

Copy seen: DLC.

34557. ELLSWORTH, CLARENCE EUGENE, 1882- , and G. L. PARKER. Placer mining in the Yukon-Tanana region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 153-72)

Contains summaries of developments in 1910 in the Fairbanks, Circle, Hot Springs, Rampart, Salcha-Tenderfoot,

Fortymile, Seventymile, Eagle, and minor Yukon districts. *Copy seen:* DLC.

34558. ELLSWORTH, CLARENCE EUGENE, 1882-, and **R. W. DAVENPORT.** Placer mining in the Yukon-Tanana region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 202-222)

Describes the gold placer mining developments in this central Alaska region in 1912, covering the Fairbanks, Circle, Fortymile, Seventymile, Eagle, Hot Springs, Rampart, Salchaket and Tenderfoot districts. *Copy seen:* DLC.

34559. ELLSWORTH, CLARENCE EUGENE, 1882-, and **R. W. DAVENPORT.** Preliminary report on a water-power reconnaissance in south-central Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 155-83, 5 maps incl. 4 fold.)

The methods of investigation, definitions of terms used, and the climate of the area are indicated. Descriptions are given of the general features, stream flow, and water powers of the following regions—Controller Bay, Copper River basin, Prince William Sound, Kenai Peninsula, and Willow Creek. Statistical results are tabulated. Final report, Arctic Bibliography, No. 4567. *Copy seen:* DLC.

34560. ELLSWORTH, CLARENCE EUGENE, 1882-. Water supply of the Fairbanks, Salchaket, and Circle districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 246-70)

Discusses the data and methods used in the water supply investigations of the Fairbanks, Salchaket, and Circle districts, the precipitation and water power. The topographic and water supply conditions in each of the three districts is described, with lists of stream-gaging stations and statistical tabulations of the results of the stream-gaging measurements. *Copy seen:* DLC.

34561. ELLSWORTH, CLARENCE EUGENE, 1882-. Water supply of the Yukon-Tanana region, 1909. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 251-83)

Discusses the conditions affecting the water supply of the region; the precipitation, hydraulic development; and

explanation of data and methods. Contains lists of gaging stations and the tabulated results of stream-gaging measurements in 1909 in the Fairbanks, Circle, Rampart, and Salchaket districts.

Contains the essential results of water-supply investigations in this region in 1910. Describes the methods of carrying on the work and the collection of data. Tabulates monthly precipitation 1903-1910. Discusses hydraulic development, water-power possibilities, and winter runoff. Describes the water-supply conditions, lists gaging stations and measuring points and tabulates measurements in the following districts: Fairbanks, Salchaket, Circle, Fortymile, Eagle, and Seventymile. *Copy seen:* DLC.

34563. ELLSWORTH, CLARENCE EUGENE, 1882-, and **R. W. DAVENPORT.** Water supply of the Yukon-Tanana region, 1912. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 223-78, fold. diagrs.)

Sixth annual report of water-supply investigations in this central Alaska region. Essential information resulting from 1912 investigation is presented. Data and methods are described, and monthly precipitation in inches at stations in the Yukon-Tanana region, 1903-1912 is given; possible water-power development is summarized. The water supply of the Fortymile, Seventymile, Eagle, Circle, and Fairbanks districts is discussed, with statistical tables of data obtained. Full report for 1907-1912 is Arctic Bibliography, No. 4568.

34568. EMERSON, G. C. Topographical mapping by helicopter. (Canadian surveyor, Jan. 1952. v. 10, no. 11, p. 13-22, 4 illus.) Also pub. in: Photogrammetric engineering, June 1951. v. 17, no. 3, p. 473-82.

Helicopters were used by the Topographic Division, British Columbia Dept. of Lands and Forests, for survey work in mountainous regions of British Columbia in summers 1948, 1949, 1950. Discussion deals with operation of the helicopter by pilot and engineer, and use of it by the survey group. Subjects considered include: density altitude (measure of air resistance), air temperature, wind speed,

landing areas, load limits, occupation of stations by survey groups, emergencies (rations and return routes), supplies, communications, barometer elevations by helicopter, time lapse and fatigue of pilot and crew, wheels vs. floats, carburetor ice, and maintenance of helicopter.

34572. EMILIANI, CESARE. Temperatures of Pacific bottom waters and polar superficial waters during the Tertiary. (Science, June 18, 1954. v. 119, no. 3103, p. 853-55, illus., table) 22 refs.

Studies of bottom cores of the equatorial Pacific indicate a decrease of some 8° C. in its bottom water temperature since the middle Oligocene. As the bottom water of the oceans is derived

from polar regions, a similar cooling is claimed for the Arctic Ocean and Antarctic waters. Prior to the Oligocene, the polar waters were ice free. The possible effects of these conditions on the air and water circulation of the globe in those times, are briefly discussed.

The construction and strategic significance of the railroad from Leningrad via Belomorsk and Kandalaksha to Murmansk are outlined briefly, and a detailed account given of the German-Finnish plans and attempts against the line in 1941-42. The failure of the plans is explained by the absence of roads in eastern Karelia, the lack of unity in command, failure of the German offensive in Russia in 1941, combined with the diplomatic pressure of the U. S. A., and

general defeat of Germans in 1942. The article is based on reminiscences of the author who was a member of the German military staff in Finland. Text map (p. 285) shows location of German and Finnish army in Finland in 1942.

Copy seen: DLC.

34595. ERICKSON, JOHN G. Birds seen on a trip to Labrador. (Wilson bulletin, June 1952. v. 64, no. 2, p. 101-105)

Bird counts made during an autumn 1950 trip on the Canadian vessel S. S. Kyle to Labrador ports are tabulated; the 28 species observed and the localities visited are given.

34596. ERIKSSON, TRYGGVE. Precambrian geology of the Pajala District, northern Sweden. Stockholm, P. A. Norstedt & Söner, 1954. 38 p. 14 illus., 3 maps incl. 2 fold., fold. diagr. (Sweden. Geologiska Undersökning. Ser. C. Avhandlingar och uppsatser, no. 522. Årsbok 45, 1951, no. 3) 21 refs.

Contains description of the region 67°-67°30' N. 22° to approx. 23°30' E. (Swedish-Finnish border), based on field work by the author and others in summers 1943-1949. The Precambrian bedrock may be divided into: (1) an older series of porphyries and leptites, of volcanic origin; (2) a series of sedimentary and metamorphic rocks and volcanic greenstones which unconformably overlie the first series; and (3) an intrusive series of granites and syenites. Geology and petrography of three parts of the Pajala District (consisting mainly of rocks of series 2) are described. Structure of the region, the porphyry-porphyrite series and the deep-seated intrusive rocks are also briefly covered. **Copy seen:** DGS.

34597. ERMAN, GEORG ADOLF, 1806-1877. Neuestes über die Vogulen. (Archiv für wissenschaftliche Kunde von Russland, 1867. Bd. 25, p. 72-80) Text in Russian. **Title tr.:** The most recent news about the Voguls.

Contains notes on a Hungarian publication: *Reguly Antal hagyományai* (The inheritance from Antal Reguly), ed. by Pál Hunfalvy. Part 1 (the only part

pub., Pest, 1864, copy at MH) has subtitle: *Á Vogul föld és nép* (Vogulian land and folk). It deals with the origin of the name "Mansi," describes the borders of the Vogul country, its rivers, plants and animals; the Voguls' hunting technique, dwellings, mythology and tales, social organization, songs, and relationship to the Hungarians. The investigation is chiefly based on the linguistic material, folklore texts and notes made by Reguly on his travels among the Voguls in 1843-44. **Copy seen:** DLC.

34598. ERMOLAEV, K. P. Vperedovom kolkhoze Kralnego Severa. (Zhivotnovodstvo, Jan. 1954, no. 1, p. 99-106, illus., ports.) Text in Russian. **Title tr.:** In the leading kolkhoz of the far North.

The kolkhoz *Pobeda* (Victory), in Izhma District of Komi A.S.S.R., has exclusive use of 119.4 thousand hectares of tundra and forest-tundra, and joint use with other kolkhozes, of 749.4 thousand hectares of pastures. It possesses 324 head of cattle (130 cows) and two herds (2,138 head) of reindeer. It is regarded as one of the most successful kolkhozes in the far North. The methods used by the kolkhoz in cattle raising, feeding, and milking, and in reindeer breeding are described; its most successful workers are named (all belong to two families) and their achievements indicated.

34599. ERMOLAEV, MIKHAIL MIKHAILOVICH, 1905- . Chetvertichnafa geologifa Novo-Sibirskikh ostrovov. (Leningrad. Arkhticheskii . . . institut. Bülleten', 1931. v. 1, no. 1-2, p. 10-11, 39-40) Text in Russian. Summary in English. **Title tr.:** The Quaternary geology of the New Siberian Islands.

Summary of a paper delivered to the Quaternary Commission of the Academy of Sciences, U.S.S.R., on Dec. 16, 1930. From his work while at the Geophysical Station on Bol'shoi Lyakhovskiy Island in 1928-30, author deals chiefly with the origin and basic features of subterranean (fossil) ice which fills the inner surface depression of the island. The succession of glacial and interglacial periods and transgression and regression of the sea in this area are discussed.

34600. ERMOLAEV, MIKHAIL MIKHAILOVICH, 1905- , and A. F. LAKTIONOV. Izuchenie struktury l'da.

(Leningrad. Arkhticheskii . . . institut. Bülleten', 1931. v. 1, no. 1-2, p. 12-14, illus.) Text in Russian. **Title tr.:** Study of ice structures.

Preliminary results of investigation initiated by the Arctic Institute. "The structures of distilled water ice, compressed snow, sea ice, river ice, and ground ice were studied by transmitting polarized light through sections 0.2- to 1-mm. thick. The images were magnified from 10 to 30 times and photographed with a Leica camera, Model MA 2."—SIPRE. In ground ice from New Siberian Islands, two generations of ice were distinguished. **Copy seen:** DLC.

34601. ERMOLAEV, MIKHAIL MIKHAILOVICH, 1905— . Ob usloviakh vidimosti na dalekoe rasstoianie v Arktike. (Leningrad. Arkhticheskii . . . institut. Bülleten', 1931. v. 1, no. 7, p. 123-26, 146-47, diag., tables) Text in Russian. Summary in English. **Title tr.:** On conditions of long-distance visibility in the Arctic.

Summary of author's report to the Arctic Institute U.S.S.R., on an investigation carried out at the geophysical station on Bol'shoy Lyakhovskiy Island (73°11' N. 143°14' E.). From systematic observations in the sixteen-month period Sept. 1929-Dec. 1930, the mount on Cape Syvatoiy Nos is reported visible on 111 days, with the best visibility in July and August, and the worst, zero, in May. The relation of visibility to cloudiness and the probability of visibility are discussed, with tabulation of number of days, relative percentage, and longest period per month. The connection between distribution of visibility and the unresolved question of the existence of Sannikov Land is mentioned. **Copy seen:** DLC.

Bülleten', 1931. v. 1, no. 12, p. 233-35, 257, illus.) Text in Russian. Summary in English. **Title tr.:** The Second Novaya Zemlya expedition of the Arctic Institute.

Preliminary report on geological exploration headed by the author in Aug.-Sept. 1931, along the southern shores of Matochkin Shar. A west-east traverse of the island and topographic survey of 650 sq. km. was carried out. Middle Cambrian beds, rich in trilobite

fauna were recognized on the west coast; a wide area veined with sulphide ores of iron, copper and zinc, and two beds of asbestos were found; their commercial value is not yet determined. Finds of scheelite are mentioned.

By Nov. 1, 1932, there were 484 head of reindeer in the Novaya Zemlya herd, all grazing on Gusinaya Zemlya. As these pastures are good only in summer, winter pastures had been sought on the Kara Sea coast, and such were found by A. I. Zubkov in 1931 in the Savvina River basin; their efficiency was investigated in 1932 by a part of the Novaya Zemlya expedition, headed by V. D. Aleksandrova. The pastures are evaluated, a route is suggested for driving the herd across the island from Gusinaya Zemlya. *Copy seen:* DLC.

34607. ESKIMO. News from the North. (Eskimo, Dec. 1954. v. 34, p. 17-20, 5 illus.)

Contains notes on Roman Catholic missions in the Northwest Territories, summer 1954: construction of boarding school at Chesterfield, new house at Spence Bay, workshop and greenhouse at Igloolik, mission at Cambridge Bay, ice-house at Repulse Bay; supply of Igloolik; new assignments of priests.

34608. ESKIMO BULLETIN. v. 1, no. 1-5, May 1953-Apr. 1954. Ottawa, Dept. of Northern Affairs and National Resources, 1953-1954 (in progress). Mimeographed. Issued irregularly.

The *Bulletin* is prepared by the Canadian Government to be sent to every Eskimo family. Each issue is in Eskimo in syllabics and in roman characters, with a view to the Eskimo, by comparison of the two, learning the roman characters (a duplicate issue in English accompanies no. 1-3). Baffin Island dialect is used as the standard. The bulletin explains things useful in the Eskimo daily life (e. g. small boat engine and battery, market for handicraft), gives news about Eskimos, affairs in Canada and other countries; it is to contain also stories to be read for amusement. Some issues list Eskimo words with English translations in order to improve Eskimo knowledge of English.

34609. ESSELBAUGH, NETTIE C., and others. The replacement value of the Alaska field pea, *Pisum sativum*, for human subjects. (Journal of nutrition, 1952. v. 46, p. 109-122, 4 tables) 26 refs. *Other authors:* H. C. Murray, L. W. Hardie, and M. M. Hard.

Contains a study on the replacement value of the protein of the Alaska split pea as compared with egg protein, six women serving as subjects. Pea protein was found to be only slightly less efficient for human diet than egg protein. Increase of methionine to 2.06 gm. per day made the egg replacement value of pea protein 100 percent or better. Digestibility, nitrogen balance and retention, etc., were also discussed.

34611. ESSO AIR WORLD. Arctic assignment. (Esso air world, July-Aug. 1953. v. 6, no. 1, p. 19-21, illus.)

Description of the equipment and arctic assignments of the Canadian Dept. of Transport vessels *C. D. Howe* and *d'Iberville*. The *C. D. Howe* is reinforced for a moderate amount of ice breaking, and possesses a heavy-duty mechanical crane, barges and scows, a hydrographic launch with recording fathometer, radar, and radio equipment, and, after her maiden voyage in 1950, a Bell helicopter. The *C. D. Howe* is used primarily to resupply the arctic radio and weather stations, transport members of the Eastern Arctic Patrol, gather hydrographic and topographical data, and provide medical examinations for Eskimos and other settlers. The services of the helicopter during the 1951 and 1952 voyages are described. The 1953 expedition is being made as the maiden arctic trip of the *d'Iberville*, an ice-breaker with

two helicopters stored in a heated hangar built into the aft end of the deck-house superstructure forward of the flight deck.
Copy seen: DLC.

34612. ESSO AIR WORLD. Arctic survival. (Esso air world, May-June 1953. v. 5, no. 6, p. 162-63, illus.)

Description of a two-week survival course sponsored by the Royal Canadian Air Force School of Survival on the McLeod River, 160 miles west of Edmonton, Alberta, and at Cambridge Bay, Victoria Island. Instructions concerning the preparation of various foods found in the North, as taken from the R. C. A. F. manual are included.

Contains discussion on Caribou Eskimo music, based on recordings made by Jean Gabus in the Maguse River region of Keewatin in 1938-39. Three cases of voluntary, although slight, polyphony were noted for the first time among the Eskimos. The intervals, scales, tonal process, etc. of three songs performed simply for pleasure are analyzed, with conclusion that the Eskimos are not averse to polyphony.

34616. EVDOKIMOV, ANDREĬ ANDREEVICH, 1872- , and I. V. GUT-TUEV. Zhemchug v Severnom krae. (Sovetskoe kraevedenie, Apr. 1936. no. 4, p. 25-30) Text in Russian. **Title tr.:** Pearl in the Northern Province.

The first section, by the senior author, deals with the occurrence of pearl and the industry, an old one in the Russian North. Of 75 pearl-yielding rivers, most are in Karelia and Kola Peninsula; 12 in the Northern Province (Arkhangelskaya Oblast') are listed, the pearling grounds of each and the industry generally in the Province characterized with fragmentary data on output. The wild fishing of pearl mussels devastates the grounds and destroys the trade.

The second section by Guttuev describes the pearl mussel fishing on these rivers, the methods and primitive implements used by the fishermen, etc. The unnecessary destruction of shells is deplored and suggestions are given for improving the methods.

34618. EVJEN, SIGURD, 1894- . Number and directions of cyclones passing Norway and the Norwegian Sea. (Norway. Meteorologiske institutt. Meteorologiske annaler, 1953. Bd. 3, nr. 9, p. 225-55, text map, diagrs., 7 graphs, 18 tables) 2 refs.

Two intersecting lines were plotted on a map of Scandinavia and the Greenland Sea, a NE-SW line (ABCDE) from

75° N. 35° E. to 55° N. 8° E., and a NW-SE line (abede) from 71° 4' N. 22° W to 64° 3' N. 27° E. The cyclones crossing these lines and their movements relative to the lines are tabulated and briefly discussed. Cyclones are divided into three classes according to pressure at the center, the lowest pressure noted taken as indicator of the class. Graphs show numbers of cyclones for each degree of latitude for the year and for each season.

34625. EXPLORERS JOURNAL. [Maynard Malcolm Miller]. (Explorers journal, Winter-Spring 1954. v. 32, no. 1-2, p. 23-24, illus.)

Contains brief sketch of field work and scientific projects in which M. M. Miller has participated as geologist, glaciologist, among them the Juneau Icefield Research Project 1948- , a similar project in Greenland 1951-52, and others elsewhere.

Copy seen: DLC.

34626. EXPLORERS JOURNAL. Much larger crater than Chubb believed to exist in area N.E. of Hudson Bay post of Great Whale. (Explorers journal, Winter-Spring 1954. v. 32, no. 1-2, p. 15)

Contains note on small perfectly circular succession of granitic islands in Clearwater Lake, northern Quebec (56°10' N. 74°30' W.) seen from the air by Oshin Agathon, Autumn 1953.

Copy seen: CaMAI; DLC.

34627. EXPLORERS JOURNAL. Otto Geist brings back specimens from Yukon. (Explorers journal, Winter-Spring 1953. v. 31, no. 1-2, p. 11)

Contains note on trip made in late summer 1952. Starting on Aug. 2 from Old Crow, Yukon Territory (67°34' N. 139°48' W.), Geist traveled 350 miles up the Old Crow River and northwest over the Alaskan border to mountains at the headwaters of Firth River (approx. 68°30' N. 141° W.). Vertebrate remains of Pleistocene horse, bison, musk ox, moose, and caribou, and a stump

possibly cut by a giant beaver were brought back.

Copy seen: CaMAI; DLC.

34628. EXPLORERS JOURNAL. Polar ice island yields much data. (Explorers journal, Winter-Spring 1954. v. 32, no. 1-2, p. 41)

Hole bored 52 ft. into ice island T-3 revealed 58 layers of dirt. Other borings disclosed fresh-water pockets. Similar dirt layers were found on T-1. Rocks, boulders and gravel accumulations, plant remains, mollusc shells, fish bones and caribou antlers were found, birds and mammal tracks were seen. Two sea-mounts about 3,000 ft. high were discovered by oceanographic soundings from the island. Ocean depths range from 5,000 to 13,000 ft.

Copy seen: CaMAI; DLC.

34629. EXPLORERS JOURNAL. Relics give clues to sub-arctic life. (Explorers journal, Autumn 1953. v. 31, no. 4, p. 44-45)

Contains note on ancient village site on Knife River in northern Manitoba (58°55' N. 94°40' W.) about 25 miles west of Hudson Bay, visited by J. L. Giddings in summer 1953. About 80 stone artifacts including burins, side-blades, and spalls, were found. Implements are of a distinctive type once thought peculiar to the Old World, but also found in East Greenland and Siberia. The Knife River site (age one to ten thousand years) "fills a gap between Alaska and Greenland in efforts to trace a stream of ideas around the Arctic Circle."

34633. EYTHÓRSSON, JÓN PÉTUR, 1895- . Hafis við Ísland. (Jökull, 1952. Ár. 2, p. 31-32, diagr.) Text in Icelandic. Summary in English. *Title tr.:* Polar ice off Iceland.

Contains note on the scarcity of polar ice off the coasts of Iceland since 1918, compared with frequency of ice during the 19th century. Diagram shows duration and magnitude of ice off the coasts between 1901 and 1949.

Copy seen: DGS.

34634. EYTHÓRSSON, JÓN PÉTUR, 1895- . Report on sea ice off the Icelandic coasts in Jan.-Sept. 1953. (Jökull, 1953. Ár. 3, p. 45-49, 2 illus., 6 text maps)

Contains observations between Iceland and Greenland (65°-72° N.), collected from aircraft reports, coastal meteorological stations, fishing ships and coastal vessels reporting to the Meteorological Office of Iceland and the Norsk Polar-institut. Reports are given by month. The day of each report is noted, and lat. and long. of the ice pack, margin of ice, iceberg(s), or ice flow seen are given. Coverage of ice is noted (in tenths). Maps show average position of the ice edge in Denmark Strait for each month Jan.-June. It is hoped that yearly reports on ice conditions will be included in this journal from now on.

34640. FAHNESTOCK, C. R., and C. I. BRANTON. Condensation control for Alaskan homes and farms. [College, Alaska], July 1954. 19 p. 11 fig., 3 tables. (Alaska. University. Extension Service. Bulletin 800)

Contains a generalized descriptive presentation of the causes and control of condensation in Alaskan homes and farm buildings. Early cabins had no condensation problems due to porous uninsulated walls, but improved practices such as weather-stripping, storm doors and sash, caulking, and insulation prevent leakage of warm moist air. Condensation control by vapor barrier, insulation, and ventilation in combination with each other is practised to obtain positive results. Discussion of all methods is supplemented by tabulations of the permeability of various materials to water vapor, conductivities of common materials and insulations. Proper application of vapor barrier, moisture barrier, insulation and ventilation is illustrated.

Determination of a direction-sense of movement by means of pressure shadow orientation is discussed. Data from study of an oriented specimen from the Campbell shear zone at Yellowknife (Great Slave Lake) indicate that pressure shadows may have considerable significance for the field geologist, especially if ordinary field evidence fails to establish the direction-sense of movement. A necessary condition is the availability of porphyroblasts of some kind to act as hosts for the shadow minerals.

34643. FARRELLY, THEODORE S. A lost colony of Novgorod in Alaska. (Slavonic and East European review, 1944. v. 22, no. 60, p. 33-38)

Contains a review of literature evidence on early Russian settlements in Alaska, including a letter written in 1794 by a Russian missionary, named German, in which he refers to Russians who supposedly came to Alaska from Novgorod during the reign of Ivan the Terrible (about 1570) and lived near the town Kasilov. In 1937 a surveying party found the remains of a partially buried village near Kasilov, on Kenai Peninsula. The construction of the houses shows that they were not built by the natives. The author comes to conclusion that the

report of 1794 was correct, and that the inhabitants of the excavated village were Russians. This paper is discussed by V. C. Asmous, *First Russians in Alaska*, 1944, q. v.

34645. FAWCETT, DON WAYNE, 1917-, and C. P. LYMAN. The effect of low environmental temperature on the composition of depot fat in relation to hibernation. (Journal of physiology, Nov. 29, 1954. v. 126, no. 2, p. 235-47, 3 fig., 2 tables) 31 refs.

In hamsters (animals which hibernate), low environmental temperature causes a significant decrease in saturation of depot fats; in rats (a non-hibernating animal), there is no significant change in saturation of reserve fat under similar circumstances. The amount of desaturation (in the hamster) is nearly the same irrespective of the preexisting level of saturation determined by diet.

Contains a study of the isolation of plants which occur in Europe and in North America, illustrated by numerous text maps showing their areas in the Old and New Worlds. It is based on the evidence that from the beginning of the long interglacial period which preceded the latest continental ice sheets of North America and Europe, some regions have had only local glaciation or have remained unglaciated (maps 8, 17). The plants from these unglaciated centers, now persisting as relicts from the earlier Pleistocene flora, have rarely invaded the closely adjacent regions which were denuded by the last continental glacier. In conclusion, the author pleads for active cooperation of the students of phyto-geography and historical geology.

Deals mostly with Central Asian deserts, but includes a section on the chemistry of arctic deserts (col. 24-26) stressing the slow tempo of geochemical processes in the deserts of Kola Peninsula, and the predominance of extensive mechanical destruction (weathering by water and frost) in desert landscape. **Copy seen:** DLC; MH.

34663. FEYLING HANSSEN, ROLF W. The barnacle *Balanus balanoides* (Linné, 1766) in Spitsbergen. Oslo, Brøgger, 1953. 64 p. 9 plates, 2 text maps, graphs, tables. (Norsk Polarinstitutt. Skrifter, nr. 98) 174 refs.

Living specimens of *Balanus balanoides* were found by the author in summers 1948, 1950, and 1952, at 37 localities on the west and north coasts of Vestspitsbergen, one of these localities being the northernmost at which this species has been recorded (80°3.7' N.). Its general world distribution and fossil record in arctic and sub-arctic Pleistocene deposits are considered, and the morphology of the Spitsbergen species is discussed. In Spitsbergen this barnacle occurs almost exclusively in cracks and grooves in the substratum and was found only on hard rocks. It penetrates far into the fjords, but does not occur close to glaciers at the heads of the fjords. Length of life, relation to the ice-foot, breeding and reproduction are examined. Localities at which the species was found are briefly described. Measurements of carinorostral basal diameters and heights are given in tables. **Copy seen:** DGS.

34664. FEYLING-HANSSEN, ROLF W. Conglomerates formed in situ on the Gipsbuk coastal plain, Vestspitsbergen. Oslo, Jacob Dybwad, 1952. 9 p. 5 illus., 2 text maps, diagr. (Norsk Polarinstitutt. Meddelelser, nr. 70) 9 refs.

The Gipshuk coastal plain at the end of Gipsfjorden valley (78° 20' N. 16° E.) at the inner end of Isfjorden, is formed by marine denudation on diabase bedrock. Angular diabase blocks, the result of frost action, are scattered over the plain, while rounded cobbles and boulders, with some angular blocks, form beach ridges at 45-55 m., 25-35 m., 20 m., 15 m., 10 m., and 5 m. above sea level. These ridges represent conglomerates formed *in situ*, the result of a combination of frost wedging (which supplied the blocks) and wave action (which rounded them). The angular blocks within the ridges were formed after the ridges were elevated beyond the reach of the waves.

34669. FINDEISEN, HANS, 1903- Ein Jäger- und Fischervolk am Jenissei. (Kosmos, Stuttgart, Aug. 1951. Jahrg. 47, Heft 8, p. 340-44, 5 illus., text map) Text in German. **Title tr.:** A hunting and fishing people on the Yenisey.

Contains sketches (and four photographs) from the life of Yeniseians on the Podkamennaya Tunguska, visited by the writer in 1927-28. Their tents, health and hygiene, hunting (squirrels and bears), fishing technique, superstitions and beliefs, are described, and a myth noted. Only 191 adult males and 209 females were found in 1926. The child mortality is 50 percent, scabies and eye diseases are very common.

Copy seen: DLC.

34670. FINDEISEN, HANS, 1903- Karelische Hirtenzauberer und ihre Praktiken. Augsburg, Institut für Menschen- und Menschheitskunde, 1954. 8 p. (It: Abhandlungen und Aufsätze, no. 4. Reprinted from Zeitschrift für Ethnologie, 1953, Bd. 78, Heft 1, p. 103-110) Copy in DSL. **Title tr.:** Magicians of the Karelian herders and their practices.

Contains description of rites, practiced on the day of first driving out cattle in spring. The use of magic objects (a stick, horn, cloth, etc.), the magic acts (fumigation, encircling, etc.) are described and legends of the famous magicians and their deeds given. The material was collected by A. M. Linevskii in Letnekonskaya volost' and published as "Materialy k obriadu 'otpuska' v pastushestve Karelii" (Materials on the "driving out" rite among the Karelian herders) in *Étnograf-issledovatel'*, 1928, no. 2-3, p. 41-43. Some comments are added by the translator.

Copy seen: CaMAI (reprint).

34671. FINDEISEN, HANS, 1903- Landkarten der Jenissejer (Ket6). (Zeitschrift für Ethnologie, 1930, pub. 1931. Jahrg. 62, p. 215-26, 5 illus.) Text in German. **Title tr.:** Land maps of the Yeniseians (Kets).

Contains discussion on native attempts at map drawing. During his ethnographic trip of 1927-28, the writer induced the natives to draw three maps of the Podkamennaya Tunguska River and Chernyy Ostrov, localities well known to them. The results are reproduced, with native geographic names and terms explained. These Yeniseian maps are similar to those of other Paleo-Siberians, investigated by B. F. Adler, *Karty perobytnykh narodov*, 1910 (*Arctic Bibliography*, No. 27656). **Copy seen:** DLC.

34672. FINDEISEN, HANS, 1903- Der Mensch und seine Teile in der Kunst der Jenissejer (Ket6). (Zeitschrift für Ethnologie, 1931, pub. 1932. Jahrg. 63, Heft 5-6, p. 296-315, 43 illus.) Text in German. **Title tr.:** Man and his parts in the art of the Yeniseians (Kets).

A study in primitive art: the human figure as depicted by the Yeniseians in sculptures of wood and stone, in dolls made of hide, bone, rags, as carved from metal and as painted or drawn on the shaman's garments and drum, on birch bark, and recently on paper. Members of human body, bones and especially sex organs, are also a common theme. Based on author's collection made in 1927-28, and on material published by V. I. Anuchin, *Ocherk shamanstva*, 1914 (*Arctic Bibliography*, No. 20245).

Copy seen: DLC.

34673. FINDEISEN, HANS, 1903- Schamanentum im tungusischen Kinderspiel. (Zeitschrift für Ethnologie, 1953.

Bd. 78, Heft 2, p. 307-308) Text in German. **Title tr.:** Shamanism in a Tungus children's game.

Contains description of a game played by seven-to-ten year old Tungus children at Podkamennaya Tunguska. A shamanistic performance is truly imitated: one child plays a shaman, another his helper, actual shamanistic incantations are sung, a small drum and wooden figurines of spirits are used, etc. Based on G. M. Vasilevich, *Igry tungusov*, 1927 (*Arctic Bibliography*, No. 18592).

Copy seen: DSI.

34674. FINDEISEN, HANS, 1903- Sibirisches Schamanentum und Magie. Augsburg, Institut für Menschen- und Menschheitskunde, 1953. ii, 52 p., col. plate. (Its: Abhandlungen und Aufsätze, no. 3) Mimeographed. Text in German. **Title tr.:** Siberian shamanism and magic.

Contains discussion on the background of shamanism, based on Siberian material. Shamanism is not magic, states the author, who with Ruth Benedict, sees in it the manifestation of a spiritualistic phenomenon, the shaman a medium. Yakut, Buryat and Tungus legends are quoted from G. W. Ksenofontov's *Legendy o shamanakh*, Irkutsk, 1928 (copy not located). The shaman's experience as candidate is presented to elucidate his subsequent powers. Northern Siberia is considered the birthplace of shamanism. A Yakut shaman's drum and drumstick are illustrated and explained. Supplement (p. 25-45) gives explanations of ethnologic and para-psychologic terms, as well as details on anthropologists and tribes cited in the text.

34679. FINNIE, RICHARD, 1906- . Flying beyond sixty, part I [-III]. (Canadian aviation, Feb.-Apr. 1939. v. 12, no. 2, p. 8-9; no. 3, p. 18-19; no. 4, p. 24-25, 46, illus.)

Contains a history of aviation north of 60° lat. in the arctic and subarctic territory of Canada. Inquiries about obtaining flying boats for use in the sub-Arctic to expedite its exploration were made as early as 1915 by Charles Camsell, but it was not until 1921 that Gorman and Fullerton each flew a Junkers plane as far north as Fort Simpson, Mackenzie District. The Arctic Circle was crossed

in 1929, when a number of the "first" flights were also made. By 1933, arctic flights were commonplace, with various commercial airlines serving prospectors and delivering mail. Accounts of the use of air transportation in the North by doctors, missionaries, Royal Canadian Mounted Police, trappers and traders are included. Problems encountered by arctic pilots are briefly described.

34681. FISCHER, JOHANN EBERHARD, 1697-1771. Sibirische Geschichte von der Entdeckung Sibiriens bis auf die Eroberung dieses Lands durch die Russische Waffen. St. Petersburg, bei der Kais. Akademie der Wissenschaften, 1768. 2 v.: xvi, 862, [188] p. 2 fold. maps. Text in German. **Title tr.:** Siberian history from the discovery of Siberia to the conquest of that country by Russian arms.

Work of the academician who about 1739 succeeded G. F. Müller (q. v.) as historian on Bering's Great Northern Expedition, based in part on materials collected in the course of the expedition, including such from Fischer's travels as far eastward as Yakutsk and the Yudoma River, and Müller's further north. The Siberian natives are treated in an extensive introduction (p. 1-174), among them the Yakuts (p. 103-110), Tungus (p. 110-116), Samoyeds (p. 117-21), Voguls (p. 121-24 and 162-64), Ostyaks (p. 135-41 and 162-64). Origin, languages and customs peculiar to the people are mentioned. The lengthy chronicle which follows includes occasional references to northern localities, some evidently from Müller's experiences: the foundation and

significance of Mangazeya (p. 305, 339-47); Obdorsk (now Salekhard, p. 333); Yakutsk (p. 498-99, 505-36); arctic voyages of Cossacks (p. 346-47, 514-18); etc.; also scattered remarks on the resistance of the northern peoples of Siberia to the Russian conquest. *Fold. maps* indicate roughly, areas inhabited by native peoples. Extensive geographic and historical indexes are appended, 188 unnumbered pages at end of v. 2.

34684. FISH, GENNADIĬ IVANOVICH. Belomorkanal. (Vokrug sveta, Oct. 1946, no. 10, p. 10-13, illus.) Text in Russian. *Title tr.:* White Sea Canal.

Contains a concise account of the White Sea-Baltic Canal system. With its 19 sluices, 15 dikes, 49 dams and 33 canals it was completed in 22 months. Opened in 1933, it enabled the development of new industrial centers (Belomorsk, Nadvoitsy, Segez, Pindushi, Medvezhegorsk), and through it passed over ten million tons of goods and 200,000 passengers in its first seven years.

In October 1941, the canal suffered heavy war damage; dikes and dams were blown up, towns destroyed, and for two years eight months the remains of the canal were the front line. In the summer of 1944, the Germans were driven back, and the canal's operations were restored in 1946.

Contains analysis of world trunk routes likely to materialize, with improvements in the ranges of commercial aircraft and in the volume of demand for air travel; also of routes which might develop, should the Iron Curtain disappear. The relative locations of the principal areas and the density of the services between them are indicated. Of the three chord routes at present politically feasible, two are likely to be opened for commercial use, namely Europe to Japan and the west coast of North America via the North Pole. A direct Europe-New Zealand service, via Thule, Anchorage, Midway and Canton Island is a possibility. The inauguration of transpolar routes makes possible only three short-cuts, two of which have their value reduced by having to circumnavigate northeastern Siberia. There remain eleven other possible chord routes at present politically infeasible.

34692. FITZGERALD, GERALD 1898- . Helicopter revolutionizes topographic mapping of remote areas. (Civil engineering, Dec. 1954. v. 24, no. 12, p. 48-51, illus.)

Contains description (by the Chief Topographic Engineer, U. S. Geological Survey) of field surveying and mapping operations by means of helicopters in Alaska and the U. S. Three helicopters were used in Alaska during the summer of 1948 by the U. S. Geological Survey to establish a pattern for helicopter use in surveying that has been followed with only minor modifications since. Barometric leveling by the two-base altimeter method to obtain elevations for supplemental vertical control is used extensively in Alaska. The base camp is usually located where it can be serviced by truck, boat, or fixed-wing aircraft, and so that the helicopter can operate within a 100-mile radius from it. Helicopters are hired under contract to carefully prepared specifications. Field costs for mile-to-the-inch mapping in Alaska were about \$25. per sq. mi. before helicopters were used. Since their use, the average cost has been less than \$8. per sq. mi. **Copy seen:** DLC.

34693. FITZGERALD, GERALD, 1898- . Reconnaissance of Porcupine valley, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1944. iii, 219-43 p., 4 illus. on 2 plates, 4 maps incl. 2 fold. (U. S. Geological Survey. Bulletin 933-D. Mineral resources of Alaska, 1940)

Presents the results of a topographic survey by the author in 1939 in the Porcupine valley in northeast Alaska, from the Canada-Alaska boundary west to the Yukon. Early explorations and surveys and the present field work are summarized. Description is given in some detail, of the physical features of the region—drainage (Porcupine River and tributaries) and relief (Yukon Flats, Coleen Hills, Coleen Lowland, and the Highland Province). A brief account is added of transportation, communications, climate, vegetation, animal life, and settlements.

A study designed to determine the changes in the acid-base balance of blood during cooling, and their possible effect on cardiac complications and on mortality. A marked variation of free CO₂ dissolved in the blood was observed, but little change in other anions or cations. The pH value during hypothermia varied, depending on the rate of positive-pressure respiration with oxygen, or, less effectively on administration of alkali. A pH above normal during cooling was

associated with reduced ventricular fibrillation and mortality.

34698. FLETCHER, JOSEPH OTIS, 1920- . The Arctic: challenge to the Air Force. (Air University quarterly review, Fall 1953. v. 6, no. 3, p. 52-62, illus., map)

The strategic military importance of the Arctic to air operations and the development of tactical doctrine are discussed. Geographic advantage of the United States in vulnerability from the polar air route is stated, also new advantages for effective arctic operations due to recent technological developments (in aircraft, fuels, etc.), due also to increased geophysical knowledge of the area. The operation of small, elusive aerial task forces from temporary bases anywhere on the arctic ice pack is suggested. Such a mobile striking force consisting of lone all-weather jet-fighter aircraft would be an ideal complement to our longer-range strategic air forces. Characteristics desirable of a general transport plane for use in the Arctic are outlined.

34699. FLETCHER, JOSEPH OTIS, 1920- , and L. S. KOENIG. Floating ice islands. (Explorers journal, Winter-Spring 1953. v. 31, no. 1-2, p. 1-10, 2 illus., text map)

Thickness, annual cycle, and drift of the arctic pack ice is briefly described. Ice island T-1 was discovered Aug. 14, 1946, T-2 on July 20, 1950, and T-3 on July 29, 1950. Physical features common to all include massive proportions and great thickness, regular pattern of surface corrugations, and wedge-shape similar to an axe blade. Special Ptarmigan flights were made on Mar. 19 and Aug. 1, 1951 to photograph the northern coast of Ellesmere Island, possible source of the islands. Movement of the islands from period of discovery is described and tabulated, and their surface is described from low level observations. Presence of fringe ice may be explained by some melting during the thaw and subsequent refreezing of the fresh water on contact with colder ocean water. Note by Finn Ronne in this journal, Summer 1953, v. 31, no. 3, p. 39-40, comments on mapping of ice islands by Sir Hubert Wilkins in 1930 and reports on "paleocrystic ice" by Stefansson in 1914 and Storkerson in 1918-19.

34700. FLIGHT. North Greenland expedition. (Flight, Aug. 1, 1952. v. 62, no. 2271, p. 140, illus.)

Contains brief description of the airlift operations in Aug. 1952 by Sunderland flying boats with the British North Greenland Expedition led by C. J. W. Simpson. The planes are to carry the personnel (26), stores and equipment (150 tons) from Young Sund (74°29' N.; 20°40' W.) to the base-camp site at Britannia Lake (77°07' N.; 23°40' W.). The lake is believed to be suitable for landing by flying boats. The operation was later reported by R. C. Menzies, q. v.

Copy seen: DLC.

34701. FLIGHT. Over the top: another project for a polar airline route. (Flight, Aug. 15, 1952. v. 62, no. 2273, p. 184-85, illus.)

Contains report of a plan, submitted for approval to the U. S. Civil Aeronautics Board, by Wien's Alaska Airlines to fly scheduled services between Alaska and Scandinavia via the polar basin. It proposes to operate out of Fairbanks with DC-4's. A brief description is included of the Wien brothers' present (i. e. 1952) Alaska operations, both scheduled and bush-flying. The airline employs four bush pilots operating out of Kotzebue, serving remote trapping settlements along the coast and Nome. The Wiens also operate a bush service to Point Barrow, from Fairbanks.

Copy seen: DLC.

34702. FLIGHT. Polar Lancasters; scenes from a training and research flight into the Arctic Circle by aircraft of the E. A. N. S. (Flight, Mar. 11, 1948. v. 53, no. 2046, p. 283, illus.)

Sketch of a training and research flight from Gibraltar to Iceland to the Arctic Circle by seven Avro Lancasters of the Empire Air Navigation School are presented. A distance of 2,220 miles was flown in 10.5 hours. Purpose of the flight was to establish an effective polar navigation drill, using standard equipment, to collect weather and signal information, to investigate any arctic phenomena which might manifest themselves, and to acquire experience with long-range radio aids and pressure pattern flying.

Copy seen: DLC.

34703. FLIGHT. R. A. F. arctic research. (Flight, Sept. 12, 1952. v. 62, no. 2277, p. 348)

Contains brief note reporting that *Aries III*, the specially equipped Avro Lincoln of the R. A. F. Flying College, left its base on Sept. 5, 1952 to carry out a detailed survey of flying conditions around the North Pole. The planned schedule required a non-stop return flight to Manby (England) from Whitehorse (Yukon).

34704. FLINT, MAURICE S. English lesson book for Eskimo children. Ottawa, Bureau of Northwest Territories and Yukon Affairs, July 1946. 52 p. Mimeographed.

Contains a series of 47 lessons consisting of simple phrases and sentences in English, becoming progressively more difficult. They deal with the children's daily routine, school, animals, ships, numbers, the calendar, etc. Vocabularies for the lessons are appended (p. 30-52) in three columns: (1) Baffin Island Eskimo, (2) English, (3) Greenlandic; a fourth column is left blank for the teacher to add the local dialect equivalents.

34705. FLINT, RICHARD FOSTER, 1902- . The far North and scientific research. (In: J. J. O'Neill, Symposium on the Arctic. Pub. in: Royal Society of Canada. Proceedings, June 1950. Ser. 3, v. 44, sect. 1, appendix B, p. 127-34)

Popular misconceptions of the nature of arctic regions are discussed and the physical features of Greenland, Canada, and Alaska are briefly outlined. Expeditions and methods in the 19th century are contrasted with modern scientific research. Projects now under way in topographic and geologic mapping, meteorology, oceanography, atmospheric physics, and biology, and the work of the Arctic Institute of North America are discussed.

34717. FÖRSTER, HANS ALBERT. Der weisse Weg; Forscher erobern die Arktis. Leipzig, Volk und Buch Verlag, 1952. 407 p. 23 maps (3 fold.), plates. Text in German. **Title tr.:** The white way; explorers conquer the Arctic.

Comprehensive account of the Arctic, its life and particularly its exploration, concisely presented with about a hundred excellent photographs and maps. The material is offered in a regional-historical order with emphasis on the more recent activities: the Northwest Passage (p. 17-112) in ancient, medieval Norse, and modern times; Frobisher, Davis, Hudson, Baffin, Franklin, Scoresby, Greely, Amundsen, etc., and their exploits. Greenland (p. 115-46) in earliest times, and Norse colonization; Hall, Nares, Peary, Nansen, Wegener and others and their explorations. Life in arctic America (p. 149-68) deals with the Eskimos, their life and present status. The Northeast Passage (p. 171-334) and its investigation from earliest times through Cabot, Barendsz, Dezhnev, Bering, Norden-skjöld, Nansen, etc., to the drift of the *Sedov* and present-day air travel in the area. Explorers' equipment, vessels, sledges, dogs, food, etc., is traced from old to modern times (p. 337-63). A "small natural history" (p. 367-89) dealing with arctic animals and men, special polar forms and behavior, climate, oceanography, etc. concludes the account. A chronology, brief list of narratives, and extensive index are appended.

34722. FOLINSBEE, ROBERT EDWARD, 1917- . Preliminary map, Walmsley Lake, Northwest Territories. Ottawa, 1950. fold. map 43 x 34 in. with brief text. (Canada. Geological Survey. Paper 50-4)

Contains map, scale 1 in.: 2 mi. (1:126,720) covering 63°-64° N. 108°-110° W. in Mackenzie District between Aylmer Lake and the east arm of Great Slave Lake. Bedrock geology and glacial features of the northern half of this region are discussed. Rocks range in age from the Archean Yellowknife Group of altered sedimentary and volcanic rocks to Proterozoic granitic intrusions and diabase and gabbro dikes. Glaciers moving west and northwest over the area left thick ground moraine, drumlins and eskers. Most favorable prospecting area is probably that underlain by volcanic rocks and the volcanic-sedimentary contact in the northeast corner of the map-area.

34734. FORTIER, YVES OSCAR, 1914- . Activities of the Geological Survey of Canada in the Arctic Islands, 1947-1953. (Arctic circular, Mar. 1954. v. 7, no. 3, p. 25-34) 8 refs.

Eighteen seasonal projects were carried out in Baffin, Ellesmere, and other islands. These are listed chronologically with names of geologists participating, area studied, type of project, and subsequently described in detail as to itineraries, field work, geological and other results.

Copy seen: CaMAI; DLC.

34735. FORTIER, YVES OSCAR, 1914- , and others. Geology and petroleum possibilities in Canadian Arctic Islands. (American Association of Petroleum Geologists. Bulletin, Oct. 1954. v. 38, no. 10, p. 2075-2109, 5 illus., 2 text maps) 178 refs. *Other authors:* A. H. McNair, and R. Thorsteinsson.

Large structural elements of the islands and geologic formations in each are described in turn. The northern Canadian Shield contains three broad arches which isolate three basins (Foxe, Victoria Strait, and Wollaston) filled with relatively thin flat Ordovician and Silurian strata. To the north are two large deep basins (Jones-Lancaster and Melville) of Cambrian to Devonian sediments, and still farther north lies a

major orogenic system, extending approx. 1,400 miles southwest and west from north Greenland to Prince Patrick Island. Northwest and southwest of the orogenic systems is a broad coastal plain of essentially flat Mesozoic and Cenozoic strata. Although active oil and gas seeps have not been found, an analysis of the sedimentary basins and coastal plain indicates conditions similar to other parts of the world in which oil fields have been discovered.

Trudy, 1941. vyp. 12, p. 21-70, 7 text illus. incl. sketch maps, 16 plates) about 50 refs. Text in Russian. *Title tr.:* The site of Veret'ye; report of the Northern Expedition of the State Historical Museum on excavations made in 1929-1934 in the peat bog of Lake Lacha basin.

Contains description of excavations in peat-bogs near the Kimeny River and Lake Lacha, about 62° N., 35 km., south of Kargopol', which resulted in abundant finds of bone, horn, wood, stone and clay artifacts (none of bronze or iron). Two cultural layers were found: the lower dated at about 1500 B. C., the upper about 500 B. C. The neolithic people represented, lived from hunting and fishing, their only domesticated animal was the dog. A great variety of bone and stone arrow points and harpoon heads, needles, fishing hooks, awls, chisels, axes, adzes, scrapers and burins, nuclei, etc., are described. Objects of art and cult (amulets, human and animal figures), fragments of ceramics (about 5000 sherds, some plain, others covered with hole-comb and other ornaments) were also found.

FOSTER, G. L., *see* Bartlett, R. G., and others. Evidence of an emotional factor in hypothermia . . . 1954. No. 33471.

34737. FOSTER, L. R. R. Some recent work on polar navigation. (Institute of Navigation, London. Journal, Jan. 1952.

v. 5, no. 1, p. 12-26, 6 fig. incl. 2 text maps, 3 tables (1 fold.))

Distance rather than speed is estimated when navigating in ice. Usually the ship's progress relative to a conspicuous ice floe or iceberg is used to estimate distance. Mean course and speed should be estimated at intervals of about 2 hrs. in open pack. Accurate navigation is not essential in ice, and reliance must be placed on astronomical observations, radar when near the coast, and soundings. The general effects of polar conditions on astronomical navigation, the accuracy of position lines with an ice horizon, and the usefulness of a bubble sextant in ice were investigated. Frequent measurements of the dip of the horizon were made with the Pulfrich instrument, and the vertical and horizontal diameters of the sun were measured over different altitude ranges to investigate refraction. Use of the bubble sextant, despite a two-three mile observation error, is recommended for all ships working in ice. Previously listed as *Arctic Bibliography*, No. 29082.

Copy seen: DLC.

34738. FOSTER, L. R. R. Watering ships in pack ice. (Polar record, Jan. 1954. v. 7, no. 47, p. 52-53)

To conserve fuel in ships beset in ice, as little as possible should be used to melt ice for fresh water. Pools of fresh water may often be found on ice floes in the Arctic. Ice for melting should be taken from floes which have been under pressure. Ships should be equipped with fresh-water pipe, steam pipe, and readily accessible steam-heated tank for melting ice.

34739. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Anchorage, Alaska: a city on the move. (American city, Nov. 1954. v. 69, no. 11, p. 81-83, 145, 6 illus.)

Fourth in a survey series on Alaskan cities. Anchorage is Alaska's largest (metropolitan population 51,000) and, at present, most central city; two-thirds of all communities in the Territory with a population over 50 are within a 300-mile radius. Topics discussed include: public works program and taxes; electric power; water supply; sewage and refuse disposal; police and fire protection; street construction; public works department equipment; and street lighting.

Copy seen: DGS.

34740. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Fairbanks, Alaska:

a sub-arctic city moves forward. (American city, Dec. 1954. v. 69, no. 12, p. 80-83, 7 illus.)

Fifth in a survey series on Alaskan cities. Topics discussed include: population growth since 1949 (now 3,500, including environs: 5,700); water system and pumping stations (in some detail); electric plant; telephone service; sewerage problems; street surfacing and the dust problem; fire department equipment; street lighting; snow removal; finances; and refuse removal. Needed municipal improvements are outlined.

Copy seen: DGS.

34741. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Juneau, Alaska: Alaska's city of stability. (American city, Oct. 1954. v. 69, no. 10, p. 123-24, 2 illus.)

Third in a survey series on Alaskan cities. Juneau, the Territory's most extensively developed municipality, has a population of 6,500, or 9,000 including the environs. Topics discussed include: the proposed Taiya aluminum project and hydroelectric development, involving diversion of certain headwaters of the Yukon River; streets; snow removal; finances; water system; taxes and revenue; police and fire departments; and the avalanche problem.

Copy seen: DGS.

34742. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Ketchikan, Alaska: the city that thrives on obstacles. (American city, Sept. 1954. v. 69, no. 9, p. 95-97, 5 illus.)

Second in a survey series on Alaskan cities. Ketchikan (population 12,500 in city and environs), located in the southernmost part of the Alaskan panhandle, has no highway or railroad connections with the mainland and an airport only on a neighboring island; direct shipping facilities are by steamship and are limited in winter. The city's pulp mill and logging operations, street system, water system and sewage disposal, electric plant, police and fire services, refuse disposal, etc., are briefly discussed.

Copy seen: DGS.

34743. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Statehood would benefit Alaskan cities. (American city, Aug. 1954. v. 69, no. 8, p. 104-106, 4 illus.)

First in a survey series on "problems, progress, and potentials," of seven Alaskan cities. Economic restrictions imposed on Alaska by territorial status

are reviewed, with emphasis on shipping costs and highway improvement; and brief descriptions of Anchorage, Valdez, Seward, Cordova, Ketchikan, Juneau, and Fairbanks are given. Alaskan cities are cited as proving-grounds for U. S. municipalities; their management of utilities, city planning, etc. under unusual conditions is noted. **Copy seen:** DGS.

34744. FOSTER, WILLIAM SOUTH-MAYD, 1910- . Three small Alaskan cities ready themselves for a great future. (American city, Jan. 1955. v. 70, no. 1, p. 120-23, 10 illus.)

Final article in a series on Alaskan cities: Seward, Valdez, and Cordova are described with note of building programs, water, sewage, and electric systems, snow removal problems, and fire-fighting equipment, and conclusions on needed improvements in these facilities. **Copy seen:** DGS.

34745. FRACASSO, E. Contributo alla roentgenoterapia dei gelani. (Annali di radiologia diagnostica, 1946. v. 18, p. 190-92) 7 refs. Text in Italian. **Title tr.:** Contribution to X-ray therapy of frostbite.

An account based on treatment of 25 cases, with information on earlier use of the method in frostbite; pathology; techniques applied; results.

Copy seen: DSG.

34746. FRADE, F. Estrutura e termoregulação da pele dos Proboscídeos. (Gazeta médica portuguesa, 1954. v. 7, no. 1, p. 282-86, 4 fig.) 17 refs. Text in Portuguese. Summary in English and French. **Title tr.:** Structure and thermoregulation of the skin of the Proboscidea.

Comparing the skin structure of living and extinct elephants, the author believes that the thermoregulatory mechanism of the former "is only depending on the dermopapillary layer" due to disappearance of the hair, cutaneous secretion, panniculus adiposus and mesenteric fat.

34747. FRÄNKEL, ERDHART. Die geologische Karte von Nord-Scoresby Land, NE-Grönland. København, C. A. Reitzel, 1953. 56 p. illus. 4 maps (1 fold.), cross-sections, tables. (Meddelelser om Grönland. Bd. 113, nr. 6) 26 refs. Text in German. **Title tr.:** Geologic map of North Scoresby Land, northeast Greenland.

Contains results of a survey carried out in summer 1951 during the Danish East Greenland Expedition by a party of three led by the author, in the region 72°07'-30' N. 24°15'-25°45' W. (Alpefjord, Segelsällskapet's Fjord, Kong Oscars Fjord region). Stratigraphy of the Eleonore Bay formation (Upper Algonkian), Cambro-Ordovician, and (briefly) Devonian and Carboniferous outcrops and Quaternary deposits is discussed. Structural features are described, and brief notes are given on the morphology of the Staunings Alps.

Copy seen: DGS.

34748. FRÄNKEL, ERDHART. Geologische Untersuchungen in Ost-Andréas Land, NE-Grönland. København, C. A. Reitzel, 1953. 160 p. illus., 11 maps (5 fold.), cross-sections, tables. (Meddelelser om Grönland. Bd. 113, nr. 4) 49 refs. Text in German. Summary in English, p. 151-57. **Title tr.:** Geological investigations in East Andréas Land, northeast Greenland.

Detailed geological studies of part of the Caledonian mountain chain of East Greenland were carried out in 1948-1950 during the Danish East Greenland Expedition. Stratigraphy of the Eleonore Bay formation (Precambrian) and the Cambro-Ordovician sediments of East Andréas Land (73°30' N. 26° W.) at the head of Kejser Franz Josephs Fjord is discussed in detail, with brief description of Pleistocene and Recent deposits. The whole sequence from the Eleonore Bay formation through Cambro-Ordovician consists of sediments apparently laid down in a shallow sea in a continuously subsiding belt. Acid, intermediate, and basic intrusives in the Eleonore Bay formation sediments are briefly described, followed by a detailed discussion of the structure of the region and a chronological summary of tectonic events.

34749. FRÄNKEL, ERDHART, and others. Mountain exploration in North-east Greenland. (In: The mountain world, 1953. London, Allen and Unwin; New York, Harper, 1953. p. 184-220, 13 illus., 5 text maps.) Also pub. in German as: Bergfahrten in Nordost-Grönland. (In: Berge der Welt, 1953. p. 185-224.) Other authors: F. H. Schwarzenbach, P. Braun, J. Haller, H. P. Buess, and W. Diehl.

Contains collection of brief general reports on scientific exploration and

mountaineering by Swiss members of the Danish East Greenland Expedition, 1947-1951, in the general region 72°-74° N. 20°-32° W. Topography, climate, and glaciers of the five north-south trending zones from the sea to the inland ice are briefly described by E. Fränkl (p. 184-86); mammals of the inland valleys, by F. H. Schwarzenbach (p. 187-88); mountaineering in summer 1951 in the Staunings Range, by P. Braun (p. 189-95); crossing of Andrées Land, mountaineering, and geological observations Apr.-May 1950, by J. Haller (p. 195-202). Description is given of the nunatak zone at the head of Kejser Franz Josephs Fjord, by H. P. Buess (p. 203-213). A traverse of the inland ice from Cecilia Nunatak (72°30' N.) to Hobbs Land (74° N.) carried out by H. R. Katz, H. Röthlisberger, W. Diehl, and their crossing of the nunatak zone from Hobbs Land east to Strindbergs Land in summer 1951, is reported by W. Diehl (p. 214-19).

34750. FRÄNKEL, ERDHART, and others. Three explorations in North-East Greenland. (*In:* The mountain world, 1954. London, Allen and Unwin; New York, Harper, 1954. p. 169-88, 7 illus. on 6 plates, 2 text maps) *Also pub.* in German as: Drei Forschungsreisen in Nordostgrönland. (*In:* Berge der Welt, 1954. Bd. 9, p. 166-87) *Other authors:* J. Haller and P. Bearth.

Contains brief general accounts of mountaineering and exploration in summer 1953 by Swiss members of the Danish East Greenland Expedition (led by L. Koch). A 690-mile trip across Peary Land by E. Fränkl and F. Müller from Friggs Fjord (tributary of Frederick E. Hyde Fjord; 83°17' N. 26° W.) on the south to Kap Morris Jesup (83°39' N. 34°17' W.) on the north is described by Fränkl, with notes on the flora, topography, weather, and geology. Ascent of Mt. Shackleton near Petermanns Bjærg in central East Greenland (approx. 73°04' N. 28°36' W.) by a three-man group is described by J. Haller, and comments on mountaineering in the Werner Mts. south of Kong Oscars Fjord (approx. 72°22' N. 24° W.) are made by P. Bearth.

34751. FRÄNKEL, ERDHART. Vorläufige Mitteilung über die Geologie von Kronprins Christians Land, NE-Grön-

land, zwischen 80°-81° N. und 19°-23° W. København, C. A. Reitzel, 1954. 85 p. illus., 6 maps (1 fold.), cross-sections (1 fold.), tables. (Meddelelser om Grønland. Bd. 116, nr. 2) 32 refs. Text in German. Summary in English, p. 78-83. **Title tr.:** Preliminary communication on the geology of Kronprins Christians Land, northeast Greenland, between 80°-81° N. and 19°-23° W.

Contains results of author's field work in summer 1952, during the Danish East Greenland Expedition led by L. Koch. Stratigraphy is described in detail, with discussion of the terms "Greenlandian" (here used for uppermost Precambrian) and "Thule Formation." Comparisons are made between this region and North and East Central Greenland, Canada, and Northern Europe. Structure is described, the principal feature being the primarily Precambrian "main nappe" overthrust upon Silurian limestones. Kronprins Christians Land lies on the western border of the East Greenland Caledonian chain where metamorphism is weak compared with the center of the orogeny between 72°-76° N. Weather observations in the Centrumso region (80°20' N. 21°-23° W.) July 31-Aug. 22, 1952, by F. Müller, and notes on botany and zoology by F. H. Schwarzenbach are included.

**34752. FRAERMAN, RUVIM ISA-
EVICH, and P. D. ZAIKIN.** Plavaniia V. M. Golovnina. Pod red. N. N. Zubova. Moskva, Gos. izd-vo geograf. literatury, 1948. 118 p., port., map. Text in Russian. **Title tr.:** Voyages of V. M. Golovnin. N. N. Zubov, editor.

A popular account of the main achievements of the Russian navigator and naval officer, Vasilii Mikhailovich Golovnin, 1776-1831: his voyage from Kronshadt to Kamchatka and Alaska on the *Diana* in 1807-1810, his trip to the Kuril Islands in 1811 and captivity in Japan, and his round-the-world voyage on the *Kamchatka* in 1817-1819. The text is based almost exclusively on Golovnin's own works (listed p. 118). Map (p. 117) shows routes of the voyages. N. N. Zubov in his preface stresses the significance of Golovnin's achievements.

EVICH, and P. D. ZAIKIN.** Zhizn' i neobyknennnye priklucheniia kapitan-leitenanta Golovnina, putesthestvennika

i morekhodstva. Moskva, Voennoe izd-vo, 1946-1948. 2 v.: 280, 303 p. Text in Russian. **Title tr.:** The life and extraordinary adventures of Captain-Lieutenant Golovnin, traveler and seafarer.

The text of vol. 1, richly illustrated, was first published in the magazine *Vokrug sveta*, 1946, no. 1-7. A second edition, richly illustrated was published in one volume by Izd-vo Molodai Gvardiia, 1950 (499 p., port., illus., plates).

A biographical novel about the famous Russian navigator, Vasilii Mikhailovich Golovnin, 1776-1831, based chiefly on his own writings. The story of his education in the Russian Naval School in Kronshtadt, his service in the English Navy, his voyage to Kamchatka on the *Diana* in 1807-1809, a trip to Kuril Islands in 1811 and captivity in Japan, and his round-the-world voyage on the *Kamchatka* in 1817-1819 is recounted, with emphasis on abilities and such traits as courage, generosity and patriotism displayed by Golovnin and other Russian sailors (F. P. Vrangeli, F. F. Matiushkin, F. P. Litke, etc.).

34757. FRASER, BLAIR. Backstage in the North: the loneliest job in the world. (Maclean's magazine, Nov. 15, 1954. v. 67, no. 22, p. 6, 109-110)

Contains popular description of life at the joint U. S.-Canadian arctic weather stations, Resolute, Eureka, Alert, Isachsen, and Mould Bay. An Eskimo village at Resolute is also described.

Copy seen: DLC.

34758. FRASER, BLAIR. The truth about our arctic defense. (Maclean's magazine, Nov. 15, 1954. v. 67, no. 22, p. 20-21, 50, 52-54, 56, 5 illus.)

Case is presented that "the Arctic's best defense is the vast empty Arctic itself." Status of the radar early warning systems, problems of arctic navigation, equipment for low temperature aircraft operations, and wind-chill and low temperature effects on humans are noted. Brief descriptions are given of U. S.-Canadian weather stations, the Thule air base, and military exercises and training at Fort Churchill.

Copy seen: DLC.

34759. FRASER, FRED. Wildlife management in the Yukon Territory. (Pulp & paper magazine of Canada, Feb. 1953. v. 54, p. 88, 91)

Summary of paper presented at joint meeting of Canadian Institute of Forestry and Society of American Foresters: the effects of the Alaska Highway on wildlife conditions prior to establishment of wildlife management in Aug. 1949; the Game Branch and regulation of trapping; introduction of elk, bison, etc.

34760. FREDERIKSEN, SVEND, 1906- Stylistic forms in Greenland Eskimo literature. København, C. A. Reitzel, 1954. 40 p. (Meddelelser om Grønland. Bd. 136, nr. 7) approx. 50 refs.

Greenland literature may be divided into (1) an old Eskimo era, (2) a time of transition, and (3) modern literature. Stock of words, parts of speech, imitation of foreign expressions and old Greenland speech, figures of speech, repetition, and syntax are discussed, with many examples and comparisons between modern and old Eskimo forms. **Copy seen:** DGS.

FREEDMAN, ARTHUR, see Horvath, S. M., and A. Freedman. The influence of cold upon the efficiency of man. 1947. No. 35311A.

34761. FREEMAN, A. E., Jr., and J. E. ACKERT. *Metorchis albidus*, a dog fluke new to North America. (American Microscopical Society. Transactions, Jan. 1937. v. 56, no. 1, p. 113-15, illus.)

The first occurrence in North America of this carnivore fluke native to Europe. It was taken from an Eskimo husky dog recently brought from Alaska to Los Angeles, California, which died there of cirrhosis of the liver. **Copy seen:** DLC; MH-Z.

34762. FREEMAN, THOMAS NESBITT, 1911- Interim report of the distribution of the tabanids obtained in the Northern Insect Survey. Ottawa, Dec. 1953. 38 p. 35 text maps. (Canada. Defence Research Board. Environmental protection technical report, no. 4) Also pub. as: Canada. Dept. of Agriculture. Division of Entomology. Contribution, no. 3090.

Contains 35 distributional maps based on specimens obtained by Northern Insect Survey parties, 1947-50 inclusive. For each of 35 species of tabanids in four genera (*Atylotus*: three species, *Chrysops*: seven, *Chrysosona*: one, *Tabanus*: 24), Canadian distribution is shown. Their general distributional patterns (e. g. boreal forest, transcontinental; cordilleran; etc.) are indicated in preliminary listing of the species. **Copy seen:** CaMAI.

34763. FREGLY, MELVIN J. Cross-acclimatization between cold and altitude in rats. (American journal of physiology,

Feb. 1954. v. 176, no. 2, p. 267-74, illus., tables) 20 refs.

Rats which lived at 25° C. showed increasing tolerance when repeatedly exposed to 39,000 ft. simulated altitude, in contrast to animals which lived at 5° C. Rats acclimatized to 19,000 ft. altitude and exposed to 5° C. cooled more quickly than controls. The experiments indicate that there exists a negative cross acclimatization between cold and altitude, and between altitude and cold. **Copy seen:** DLC.

34764. FREGLY, MELVIN J. Effects of extremes of temperature on hypertensive rats. (American journal of physiology, Feb. 1954. v. 176, no. 2, p. 275-81, illus., tables) 20 refs.

Normal rats exposed to cold air (5° C.) for 20 days showed increased blood pressure, in contrast to hypertensive animals. Food intake increased in both groups in the cold environment, and so did total K and Na. Exposure to 5° C. caused rises in total fluid and water intake and urine output of hypertensive rats, but normal ones did not follow that pattern. **Copy seen:** DLC.

34765. FREIBURG, RICHARD E., and P. C. DUMAS. The elephant seal, *Mirovunga angustirostris*, in Oregon. (Journal of mammalogy, Feb. 1954. v. 35, no. 1, p. 129)

A body of an adult male specimen of this species was washed upon the beach, four miles south of Bandon, Coos County (approx. 43° N. lat.). This is apparently the first record from Oregon for this species, which occurs as far north as Alaska. **Copy seen:** DSI-M.

34766. FREIDAY, DEAN. The Aleutians, island necklace of the North. (Natural history, Dec. 1945. v. 54, no. 10, p. 444-55, 21 illus., text map) ref.

Contains description of the Aleutian Chain based on the author's observations while on duty with the U. S. Navy in World War II. Formation and growth of the islands is outlined. Akutan and Makushin Volcanoes and the glaciers on Makushin are described. A caldera on Unmak Island (christened "Zoomie Crater"), which was unreported prior to World War II, was visited by jeep and is described in some detail. Many excellent photographs illustrate topography and show the volcano forms and glaciers. **Copy seen:** DLC.

34767. FREITAG, ERIKA. Probleme des transpolaren Luftverkehrs. (Geographische Rundschau, Aug. 1954. Jahrg. 6, Nr. 8, p. 312-16), 29 refs. #. Text in German. *Title tr.:* Problems of trans-polar air traffic.

Contains outline of transpolar flights made between 1919 and 1954, followed by a discussion of such problems as knowledge of topography of arctic land masses and of condition of sea ice, temperature conditions, navigation in high latitudes, the political situation—problems of sovereignty in the polar basin, and the future of transpolar flights in both northern and southern hemispheres.

34775. FRIEDMAN, KAREN J. Current transition in the economy of Greenland. Washington, D. C., Apr. 1954. 83 p. text map, 12 tables. Mimeographed. 11 refs.

Report based on a social-economic study made in West Greenland, 1953, supported by the Arctic Institute of North America (Project, No. ONR-106). History of the area, and aims of the Greenland Commission's Report of 1950 are briefly surveyed. The changing economy is analyzed: fisheries, sheep farming, mineral industry (coal and cryolite), and shipping. Relocation of the population, construction program, organization of technical services, as well as the social and cultural programs in education, housing, health, etc., are considered. Legislation and administration of the changing times are discussed. Special techniques of the development program, its achievements in regard to the budget, physical construction, fisheries and farming, prices and incomes, etc., are described and evaluated.

Appendix contains data on: population (1938, 1947, 1951); Danish Govt. revenue and expenditure on Greenland; investment, domestic and foreign trade;

the cod fishery, livestock; household budgets, wages and prices, etc.

34779. FRISTRUP, BØRGE. High arctic deserts. (International Geological Congress. 19th, Algiers, 1952. Déserts actuels et anciens, pub. 1953. Sect. 7, fasc. 7, p. 91-99, 2 plates) 11 refs.

One of the most typical arctic deserts is found in Peary Land (northernmost Greenland, 82°55' N. 32° W.). Investigations were carried out there with the aid of aircraft during the Dansk Pearylandekspedition, 1947-1950. Geology, glaciation, and climate are briefly described, and the effects of wind erosion discussed in some detail. Desert conditions are the result of extremely low annual precipitation (100-125 mm. or less), great evaporation, and extremes of temperature. All loose material is carried away by the wind, sandstones are grooved and hollowed, and harder rocks polished and faceted by drifting sand, snow, and ice needles. Salt crustations cover large areas. Similar deserts are found in other parts of Greenland in areas of continental climate, along the edge of the inland ice at the heads of the fiord complexes, especially in the Søndre Strømfjord region of West Greenland (66°04' N. 53°13' W.).

34780. FRISTRUP, BØRGE. Peary Land. (Naturens verden, 1951. Årg. 35, hefte 1-2, p. 19-33, 9 illus.) Text in Danish. English translation for the Canadian Defence Research Board (T 2 D. 14 p. mimeographed) at CaMAI.

Contains outline of exploration, 1881-1950, and description of this region of northwest Greenland based on observations during the Dansk Pearylandekspedition in 1947-1950. Topography, glaciers, rivers, climate, climatic change and glacier recession, role of evaporation, plants, animals, insects, Eskimo relics, etc., are briefly presented.

34781. FRITZ, MADELEINE ALBERTA, 1896-, and **J. S. CRANSWICK.** Lower and Middle Devonian of the James Bay Lowland. (Geological Association of Canada. Proceedings, 1953, v. 6, pt. 1, p. 69-74, 7 cross-sections) 2 refs.

Three stratigraphic units, the Sextant (Lower Devonian), Middle Abitibi River

limestone, and Upper Abitibi River limestone (Middle Devonian) are included in an exposure along the Abitibi River halfway between Cochrane and Moosonee northern Ontario (approx. 50° N. 81° W.). Each formation is briefly described and four stages in the geologic history of the region are outlined. They involve an interval of erosion following withdrawal of the Silurian sea and three stages of progressive marine transgression in the Middle Devonian. **Copy seen:** DGS.

34782. FROELICH, A. Les Lapons d'Enontekiö. (Association de Géographes Français. Bulletin, May-June, 1949. no. 202-203, p. 66-76, map) **Title tr.:** The Lapps of Enontekiö.

The geographic and climatic conditions of the region west and east of the Palojoki, a left tributary of the Muoniojoki below Karesuando in Finnish Lapland, are described briefly, and, in more detail, the reindeer-breeding technique among the Lapps. The life of the mountain (seasonally-migratory, reindeer-breeding) Lapps and that of the sedentary Lapps and Finns (agriculturists and cattle breeders) is sketched. The sedentary Lapps in the Kōnkämäeno valley are almost completely Finnicized, and vice versa, the Finns of the region having considerable admixture of Lapp blood. The influence of civilization upon the life of the nomads, the devastation of Lapland by retreating Germans in 1944, and the role of modern highways and the tourist trade are discussed. Only 150 reindeer-breeding Lapps are still nomadizing in the region of Enontekiö. **Copy seen:** DLC.

An insect collection of over a thousand specimens and a practical survey of insect pests were made in Katmai National Monument during three weeks

work, July-Aug. 1953, as part of the Katmai Project. Collecting was done in three major life zones: (1) treeless (arctic) tundra; (2) interior (sub-arctic) Hudsonian zone of woods and great lakes; and (3) maritime (sub-arctic) region of mountainous alder-grasslands on Shelikof Strait. The general collection is described. Biting diptera are discussed, and field observations are recorded on snipe flies, punkies and swarming dance flies. **Copy seen:** DI.

Title tr.: On the point of stimulation, sensitivity and excitability of the thermal nerves.

Contains a study aimed to determine the causes of the slightly higher thermal sensitivity of the left hand (as compared with the right), an observation made earlier by the author and H. Hahn. No difference in the excitability of the sensory terminations nor in their location in the tissues were found. A systematic difference in sensitivity between the receptors of the right and left hand is assumed. Problems of adaptation and re-adaptation, etc., were also studied.

Kiel, 1939. 150 p. illus., maps, diagrs., 2 plates. (Kiel. Universität. Geographisches Institut. Schriften, Bd. 9, Heft 2) 292 refs. Text in German. **Title tr.:** North Teutonic colonization in the Atlantic-Polar area. Studies on the question of the northern limits of settlement in Norway and Iceland.

The principal features of the historic Norse and Danish expansion in Iceland and West Greenland are analyzed. The natural characteristics of both regions, settlements, colonizing agencies (missions, trades), 19-20th century developments and the current state of settlement are treated in turn. Icelanders in the U. S. and Canada, changes in the way of life and settlement in Norway, Iceland, Greenland and Canada, fluctuations in the northern limit of settlement, and the north Teutonic peoples' role in pushing

back those limits are briefly considered.

The study was based on extensive literature and on the author's two month visit to Iceland in summer 1935.

34809. GAKKEL', ĬAKOV ĬAKOV. LEVICH. Podvodnyĭ khrebet Lomonosova. (Vokrug sveta, Nov. 1954. no. 11, p. 4-7, illus., map) Text in Russian. **Title tr.:** The Lomonosov submarine range.

The discovery of this range by Soviet explorers is recounted: the first signs of its existence were found by the High Latitude Expedition of 1948 (led by M. E. Ostrekin, the author participating) when in April bathymetric measurements revealed a 1,500 m. elevation of the sea bottom. Study of the hydrological and hydrobiological material collected indicated that the elevation might represent part of a range extending across the Arctic Basin, and this was confirmed by explorations of the High Latitude Expeditions of 1949 and 1950, and by observations of the Drifting Station "North Pole-2", 1950-1951. The full extent of the range, 1,800 km. long and 2,500-3,000 m. high, was disclosed by the work of special parties headed by I. I. Cherevichnyi and M. E. Ostrekin in 1954, the author again participating, and by observations of the Drifting Station "North Pole-3," 1954, which crossed the range in August. Its highest point, 954 m. below sea level, was found by a party headed by the flyer G. V. Sorokin and the hydrologist G. A. Ponomarenko in 1954. Study of its rocks and bottom sediments indicates Tertiary origin of the range, with possible temporary elevations above sea level. The discovery of the range throws new light on many oceanographic problems of the Arctic Basin and contributes towards understanding the ice drift. Author's photographs show pack ice over the range and a bathymetric party at

work; the lay of the Lomonosov Range between approx. 78° N. 141° E. and 87° N. 60° W., is shown schematically on text map. **Copy seen:** DLC.

34811. GAKKEL', IAKOV IAKOVLE-VICH. Za chetvert' veka; obzor deyatelnosti Arkticheskogo instituta Glavsevmorputi za 25 let, s 1920 po 1945 god. Moskva-Leningrad, Izd-vo Glavsevmorputi, 1945. 109 p. ports, illus. Text in Russian. **Title tr.:** In a quarter of a century; survey of the activities of the Arctic Institute of the Main Administration of the Northern Sea Route in 25 years, from 1920 to 1945.

The Institute was founded in 1920 under the name of Severnaya nauchno-promyslovaya ekspeditsiya (Northern Scientific-Economic Expedition) in a reorganization of Komissiya po izucheniiu Severa (Commission for the Study of the North); in 1930 it was renamed Vsesoiuznyi arkticheskii institut. It was taken over by Glavsevmorput in 1933 after the latter's establishment, and since 1938 has been called Arkticheskii nauchno-issledovatel'skii institut Glavsevmorputi. In the beginning, it organized arctic studies in all fields of science, but since 1939, when its biological and geological sections were separated into independent institutes, its work has been concentrated in the hydro-meteorological service of the Northern Sea Route (p. 39-40). Its activities over the years are reviewed here in 20 chapters: Investigations of the hydrology and aerology of the northern seas (including since 1935 Norwegian and Greenland Seas) and rivers (p. 43-62); establishment of polar stations (p. 62-66); meteorological observations and intensive study of ice

conditions (p. 66-76); ship-building and utilization of aviation (p. 73-75); magnetic observations and study of the ionosphere (p. 77-83); geological and geographical exploration and mapping (p. 84-97); organization of the Higher Arctic School of Navigation, 1935, (p. 98) and the Arctic Museum in Leningrad (p. 104-105) etc. Expeditions under its auspices, over three hundred, among them the *Sibiriakov* 1932, *Cheliuskin* 1933, *Sedov* 1937-40, Papanin's North Pole expedition of 1937-38, etc., and the complete traverse of the Northern Sea Route by more than a hundred vessels, are stressed. Individuals, vessels participating in the scientific exploratory work are noted (many illus.), and tribute paid to their achievements.

A useful summary of the institute's activities is given in T. E. Armstrong, *Northern Sea Route*, 1952 (p. 98-100) *Arctic Bibliography*, No. 20310.

Text in Russian. **Title tr.:** The excavation of frozen ground. **Other authors:** E. A. Torgonenko and A. P. Degtjarev.

"The effectiveness of various methods of excavating frozen ground is discussed. Current procedures employ thawing, crushing or explosive techniques to break up the ground to be excavated. Recent experiments have shown that excavation is readily accomplished by cutting a frozen area into squares to at least 80 percent of the thickness of the frozen layer. High-speed disk saws (revolving at 40 m./sec.) were found to cut easily, partly because of heat effects, but because of rapid wear at high speeds compromise saws revolving at 5-6 m./sec. were adopted for general use. A draw knife mounted on a mobile crane has also been found to give good results."—SIPRE.

Saint-Dizier (Haute-Marne), André Bruliard, 1950. 18 p. 12 illus. on 4 plates. (Société botanique de France. Mémoires, 1949, pub. 1950) Text in French. **Title tr.:** Algae, lichens, mosses, liverworts collected in Labrador, Hudson Bay, James Bay and in northern Manitoba.

The area visited is treated in five large regions: Labrador coast, Hudson Strait, east coast of Hudson Bay, east coast of James Bay, and west coast of Hudson Bay. For each, a general résumé is given of topography, rock and soil types; collecting stations are listed with geographic coordinates and date. Some 300 species of algae, about 75 lichens, 20 mosses, and four liverworts were found; they are listed with locations. The extensive collection of plants made on these trips was reported previously, *Arctic Bibliography*, No. 5539.

34824. GARF, ANNA L. Gorod v tundre. (Vokrug sveta, Feb. 1946. no. 2, p. 30-34, illus., col. plate) Text in Russian. **Title tr.:** A town in the tundra.

Journalist's notes on a trip to Vorkuta: the North-Pechora railway line (Severo-Pechorskaya magistral') and difficulties of its construction on permafrost ground; Kozhva station; changing character of the forests and vegetation; first impressions of Vorkuta. The story is recounted of how the rich coal deposits were discovered in 1930 by the geologist, Georgii Chernov, and the town of Vorkuta founded in 1931; the importance of its coal mines during the war is stressed. Abnormal conditions of mining, housing and accommodation, due to the climate of the area with its blizzards and frozen ground, are noted, and the successful attempt at growing vegetables and raising cows.

34828. GATES, GORDON ENOCH, 1897- . Exotic earthworms of the United States. (Harvard University. Museum of Comparative Zoology. Bulletin, 1954. v. 111, no. 6, p. 217-58) 14 refs.

"Forty-five species of eighteen genera of nine of the twelve families of earthworms are now known to have reached the United States, presumably during the last 350 years, from sources ultimately in Europe, Africa, Asia and South America. Most of these species are now permanently established on the mainland."—Summary, p. 257. Two species, *Allolobophora caliginosa* and *Lumbricus rubellus*, found in soil of an abandoned Indian village site (Auke village in Auke Bay) near Juneau, Alaska, are included.

Copy seen: DSI; MH-Z.

34829. GATES, OLCOTT, 1919- , and others. Preliminary report on the geology of the Aleutian Islands. (Science, Apr. 2, 1954. v. 119, no. 3092, p. 446-47) Other authors: G. D. Fraser, and G. L. Snyder.

Contains results of reconnaissance studies by the U. S. Geological Survey since 1946. Undated volcanic and sedimentary rocks are unconformably overlain by early Tertiary sediments, both groups being cut by intrusives of the calc-alkalic circum-Pacific suite. Unconformities younger than the intrusives probably represent a major uplift in middle Tertiary accompanied by faulting. Structure is characterized by normal faults and broad open folds. Late Tertiary to Recent calc-alkalic volcanic rocks overlie the unconformities.

34834. GEBHARD, PAUL H., 1917-, and **K. P. KENT.** Some textile specimens from the Aleutian Islands. (American antiquity, Oct. 1941. v. 7, no. 2, pt. 1, p. 171-76, illus.) 4 refs.

Contains technical analysis of five baskets or mats, five cords, and two bird skins obtained from "pre-Russian" burial caves on Kagamil and Shiprock islands. Material (mostly wild rye), method of weaving and decorations are examined.

Copy seen: DLC.

34835. GEBHARDT, ROBERT EUGENE, 1908- . Investigation of height of local magnetic anomaly at Port Snettisham, southeastern Alaska. (Terrestrial magnetism and atmospheric electricity, Dec. 1941. v. 46, no. 4, p. 451-54, text map. 2 graphs) 3 refs.

A change in declination of 131° between two shore stations about 700 yds. apart (station A, declination $109^\circ.7$ east; station B, $20^\circ.9$ west) is the result of a local disturbance at Port Snettisham, about 30 mi. southeast of Juneau. An investigation was made in Mar. 1941 of the effect on a compass in an airplane flying over the site at various altitudes. Bedrock geology of the region is briefly described. At Port Snettisham a six-ft. vein of practically solid ilmenitic magnetite is associated with the ultrabasic rocks. The anomaly was found to have an appreciable effect over about 20 sq. mi.

of land and water, to a height of about 3,000 ft.

A general description of various sections of Siberia, starting with Irkutsk province (p. 16-105), which at that time included a large part of Yakutia, Okhotsk region and Kamchatka Peninsula. Its geography, geomorphology, climate, resources, population (Russian and native), cities and towns, agriculture, industries, trades and communications are described, and notes given on the fauna, flora and soils. Chapter on the Arctic Ocean (p. 105-132) has some oceanographic data, description of the coast and various islands, especially New Siberia Island (75° N. 149° E.) discovered and named by Gedenshtrom, and notes on marine fishes, birds and fossil mammoth remains on the coast.

Subsequent chapters deal with Lake Baykal and measurement of the meridian, Amur River, and river communication in Siberia, Liamin Sor on Ob' River, and Siberian trade with foreign countries.

A German translation of this work, published as *Fragments oder Etwas über Siberia*, St. Petersburg, 1842, has not been seen. **Copy seen:** MH.

A brief biographical sketch and appraisal of the scientific work of this outstanding Soviet geologist, Vladimir Afanas'evich Obruchev, 1863- , author of over 700 scientific works, and more than 3,000 published papers (not listed here); his investigations of the geology of Siberia and studies of permafrost are stressed. **Copy seen:** DLC.

34842. GEE, EDWARD ROWLAND, and others. Geology of central Vestspitsbergen: Pt. 1. Review of the geology of Spitsbergen, with special reference to central Vestspitsbergen; Pt. 2. Carboniferous to Lower Permian of Billefjorden. (Royal Society of Edinburgh. Transactions, 1952-1954, pub. 1954. v. 62, pt. 2, p. 299-356, 14 illus. (incl. 4 plates), 5 maps (1 fold.), cross-sections 2 fold. stratigraphic columns, 3 tables) 79 refs.

Other authors: W. B. Harland, and J. R. H. McWhae.

Contains the first in a series of detailed reports based on investigations of the Cambridge Spitsbergen Expedition, 1949. Pt. 1 serves as introduction to the second and all succeeding parts, and consists of a history of field work in Svalbard, particularly in central Vestspitsbergen, from the second half of the 19th century to 1949 (by P. F. Hutchins), and a summary of the geology of the archipelago based on published material. Pt. 2 is a detailed stratigraphic study based on unpublished geological investigations of the 1919, 1920, and 1948 Scottish Spitsbergen Syndicate Expeditions and the Cambridge Spitsbergen Expeditions of 1948 and 1949. In the Billefjorden region, Lower Carboniferous non-marine deltaic, lacustrine, and estuarine deposits known as the Culm rest unconformably on Devonian and pre-Devonian rocks in a north-south-trending basin. During local intermittent marine transgressions and regressions in Lower and Middle Carboniferous, evaporites and conglomerates were deposited (Campbellryggen Group). The Upper Carboniferous was marked by a widespread transgression over all Svalbard (except possibly the extreme northwest). The thick limestones (Cyathophyllum Limestones) laid down during this period are overlain by the lower Permian Brachiopod Cherts. Structure of the area is very briefly described.

Extensive prospecting for sulfide ores (primarily copper, zinc and pyrites, with some gold, silver, lead, arsenic) has been carried out in northern Sweden for about 30 years by the Boliden Mining Company and the Swedish Geological Survey. Geological and geophysical methods are used. Actual discovery of the ore bodies has in general been due to electrical methods which are described. About 40 sulfide deposits have been found; about 12 are in actual production or in preparation.

GEKKER, NAUM LEONT'EVICH, 1861-1920, see Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Protokoly . . . 1897. No. 38128A.

34849. GELDEREN, C. van. Plaatselijke bevroezingen. (Nederlandsch tijdschrift voor geneeskunde, Apr. 17, 1948. v. 92, p. 1142-45) 7 refs. Text in Dutch. Summaries in French, German, and English. **Title tr.:** Local frostbite.

Since freezing damages the system owing to vascular spasm, early vasodilatation is desired. Novocainisation may suffice in early stages, but in older cases interruption or resection of the sympathetic trunk is required in order to reduce necrosis, stimulate healing and prevent late disturbances in local blood circulation.

Copy seen: DSG.

34850. GELL, C. F., and others. Theoretical and experimental study of freezing rates of animals and physical models. Naval Air Development Center. Report no. NM001 060. 05. 03; Mar. 4, 1954. *Other authors:* R. Crosbie and D. Cranmore. 3, 33 p. illus., 7 refs.

Contains a study of the rate of freezing of anesthetized rabbits and a monkey immersed in a liquid gas. Freezing rates of simple geometric forms of beef muscle, agar and water were also investigated, their heat flow mathematically analyzed, and applied to tissues within the animals.

34851. GEOGRAFIĀ V SHKOLE. Issledovaniĭ tsentral'noi Arktiki. (GeografiĀ v shkole, Nov.-Dec. 1954, no. 6, p. 62-63, map) Text in Russian. *Title tr.:* Exploration of the central Arctic.

Article reprinted from the newspaper *Moskovskii komsomolets*, Aug. 19, 1954, based on report of Academician D. I. Shcherbakov. Brief survey is given of achievements of the Soviet High Latitude Expedition, 1954, and of Drifting Stations "North Pole-3" and "North Pole-4", and their results appraised: investigation of the submarine Lomonosov Range, and bathymetric, meteorological, oceanographic (ice conditions) and magnetic observations. Map shows drift of stations "North Pole-3" and "North Pole-4" Apr.-Sept. 1954.

34855. GEOGRAFIĀ V SHKOLE. Novye issledovaniĭ v Arktike. (GeografiĀ v shkole, Sept.-Oct. 1954, no. 5, p. 63-66) Text in Russian. *Title tr.:* New explorations in the Arctic.

Two topics are dealt with: (1) A brief summary is given of newspaper reports published during May-June 1954 in *Pravda* and *Izvestiĭa*, on discoveries of floating ice islands claimed to have been made by Soviet fliers: a giant iceberg discovered by Cherevichnyi and Akkuratov (in 1937?) in the vicinity of hypothetical Andreev Land; a large ice island discovered by the flyer Kotov in Mar. 1946 at 76° N. 165° W., now known as "T-1;" an ice island discovered by Mazuruk in Apr. 1948 at 82° N. 170° E., now known as "T-2;" an ice island discovered by Perov in Mar. 1950 northeast from Gerald Island, now known as "T-3." The reports on discoveries of these islands are supplemented by discussion of their origin and drift. (2) Summary is given of the first accounts of the organization and preliminary results of the High Latitude Expedition in 1954, as published in July 1954 by *Pravda*, *Izvestiĭa*, and *Sovetskaiū kul'tura*.

Copy seen: DLC.

34856. GEOGRAFIĀ V SHKOLE. Novye oblastnye tsentry. (GeografiĀ v shkole, May-June 1954, no. 3, p. 74-76)

Text in Russian. *Title tr.:* New provincial centers.

Contains notes on the centers, or capitals, of six recently (1953-54) established provinces, among them, Magadan, capital of Magadanskaya Oblast'. Still a small settlement in 1947, it is now a large administrative, industrial and cultural center, connected by motor road with the Kolyma region.

Copy seen: DLC.

34857. GEOGRAFIJA V SHKOLE.

V Igarke. (Geografiia v shkole, Sept.-Oct. 1954. no. 5, p. 63) Text in Russian. *Title tr.:* In Igarka.

A note on the development of Igarka, occasioned by the 25th anniversary of its foundation on July 20, 1929. Today this town has 30 streets, many two-storied houses with central heating, clubs, a museum, schools, bus transportation, all centered around the big lumber combine.

34860. GEORGE, PIERRE, 1909- . Le climate du Spitzberg. (Annales de géographie, Apr.-June 1946. t. 55, no. 298, p. 155, text map) ref. Text in French. *Title tr.:* Climate of Spitzbergen.

Contains note on the climatic opposites and unstable weather within the archipelago caused by the warming of the west coast by the Gulf Stream and cooling of the south and east coasts by a cold current. For the west coast the annual mean is -8° C., the mean for the three summer months is 3° to 4° C., and the winter mean -25° C. Clouds and thick fogs are frequent; total precipitation, however, is only 250 mm.

Contribution de l'expédition Papanin à la géographie physique. (Annales de géographie, Nov. 15, 1938, t. 47, no. 270, p. 645-47) 3 refs. Text in French. *Title tr.:* Contribution of the Papanin expedition to physical geography.

Review of results on drift, climate, and oceanography from the Russian ice-flow party drifting between $89^{\circ}26'$ N. and $70^{\circ}48'$ N. Drift was calculated by 534 series of measurements and was found to be determined by the dominant north and northwest winds. Currents, unstable weather and storms, depth of the Arctic Basin, and water temperature and salinity at various levels are discussed on the basis of cited reports by the expedition members.

Cahiers d'études Soviétiques, no. 1.) Text in French. **Title tr.:** Scientific work and economic achievements in the Soviet Arctic.

The geography and climate, earlier exploration, and more recent expeditions in the Soviet Arctic are sketched. The work of the Glavsevmorput', the voyage of the *Cheliuskin* in 1933, and the North Pole expedition directed by O. I. Shmidt in 1937, are described. Survey is given of commercial navigation in the Arctic, mines and factories on the Kola Peninsula, at Vorkuta and Noril'sk, attempts to establish aerial communication with the Arctic, etc. Sketch maps

show the net of arctic harbors, meteorological and radio stations in 1938 (p. 23), natural resources (p. 42), and communication routes (p. 52). This pamphlet is based largely on Soviet sources (*Izvestiia*, *Zhurnal de Moscou*, etc. are cited); some French and English language publications are noted (p. 55). **Copy seen:** DLC.

Text in German. **Title tr.:** Suggestions for meteorological measurements to be made on a future Greenland expedition.

Summary statement prepared for Paul-Émile Victor, Aug. 10, 1952. Suggestions are made for determining the present state of the inland ice by various radiation measurements, methods for cloud photography, techniques for studies of the air layer near the ground, the temperature of the firn surface and within the firn, upper air winds and daily variations of surface winds, and differentiation of snowfall and snow drift in snow precipitation measurements. Radiation instrumentation is evaluated and instruments believed to be most desirable for use by stations and field parties are listed. Included are suggestions for compiling and coding data and maps.

34873. GERASIMOVSKIĬ, VASILĬ IVANOVICH. Èrikite iz Lovozerskikh tundr. (Akademiâ nauk SSSR. Institut mineralogii, geokhimii i kristallografii. Trudy, 1937, vyp. 10, p. 29-36, illus. fig., tables) Text in Russian. Summary in English, p. 36. **Title tr.:** Erikite from Lovozerskaya Tundra.

This mineral was found by Prof. Ussing in 1900 in Greenland, and was described in 1903 by O. B. Bøggild. In

1933 the author, while investigating ussingite deposits in the southeastern part of Lovozerskaya Tundra, found a small amount of a mineral quite similar to erikite. Its crystallographic, physical, optical and chemical properties are described, the deposits are characterized; and comparison is made with erikite found in Greenland (table p. 35).

34874. GERASIMOVSKIĬ, VASILII IVANOVICH. Ussingit Lovozerskikh tundr. (Akademiā nauk SSSR. Institut mineralogii, geokhimii i kristallografii. Trudy, 1937, vyp. 10, p. 5-28, illus., tables, diagrs., map) 12 refs. Text in Russian. Summary in English, p. 26-27. **Title tr.:** Ussingite of Lovozerskaya Tundra.

Several samples of this mineral were found in 1888 and 1908 (by Prof. N. V. Ussing) in Greenland and were described by O. B. Bøggild in 1914; in 1923-33 deposits of ussingite were found in Lovozerskaya Tundra and described by E. M. Bonshtedt. Summarizing results of these and later investigations, the author describes the physical and chemical properties of the mineral, gives geological and mineralogical characteristics of the four main sites of its occurrence, and reaches the conclusion that ussingite "is a secondary mineral, derived from hackmanite (modification of sodalite containing sulphur), probably decomposed by hot alkaline solutions containing silica" (p. 27). Text map (1:75,000) of a section of the western shore of Lake Luyavr, shows location of the ussingite deposits on the slope of Mt. Punkaruayv.

Corps of Engineers. Snow, Ice and Permafrost Research Establishment. Research paper 10) 3 refs. **Other authors:** W. H. Parrott, M. Diamond, and K. J. Walsh.

"The drawbar pull and hill-climbing potentials of an M-7 Ordnance half-track, a 2- and a 4-pontoon Tucker Sno-Cat were measured in the High Sierra during the winter-spring of 1951-52. The physical and mechanical properties of the top 15-20 in. of snow determined the trafficability of the snow cover for light-weight, tracked vehicles. The drawbar pull of the snow vehicles was directly related to the density of the snow cover for density values below 0.40, but at greater density values no relationship was noted. A direct relationship between air temperature and trafficability was found during the winter, while an inverse relationship prevailed during spring tests. The 4-pontoon Sno-Cat climbed slopes steeper than 55 percent, while the average slopes climbed by the 2-pontoon model and M-7 were 42 percent and 34 percent respectively. The ratio of drawbar pull for the 3 vehicles was: M-7, 1; 2-pontoon Sno-Cat, 1.16; and 4-pontoon Sno-Cat, 2.15."—SIPRE.

(Archives internationales de physiologie, June 1953. v. 61, fasc. 3, p. 338-54, illus.) 26 refs. Text in French. **Title tr.:** Thermometric analysis of vasomotor skin reactions in the normal dog and under different experimental conditions.

In addition to normal controls, animals with lumbar sympathectomy, with posterior radieotomy or with periarterial sympathectomy were studied. The effects of these interventions are described and discussed.

Copy seen: DSG.

34884. GIAJA, JEAN. Hypothermie, hibernation et poikilothermie expérimentale. (Biologie médicale, Oct. 1953. v. 42, no. 6, p. 545-80, illus., tables) about 200 refs. Text in French. **Title tr.:** Hypothermia, hibernation and experimental poikilothermia.

Contains an extensive study of these related problems, preceded by an historical review of research. Deals with: the three kinds of temperature drop in organisms; methods of cooling (by cold, by hypoxia, confinement, hypercapnia, etc.); oxygen pressure and oxidation; experimental poikilothermia and its physiological aspects; experimental poikilothermia and the organism during the winter; the defensive role of hypothermia (in asphyxia, in carbon monoxide poisoning, in insulin shock, etc.); apparent "death" and resuscitation in hypothermia, etc.

34885. GIDDINGS, JAMES LOUIS, 1909- Early man in the Arctic. (Scientific American, June 1954. v. 190, no. 6, p. 82-88, illus., text map)

Similar tools have been found by the author at the Iyatayet site, Cape Denbigh, Alaska, 1948-1952 and on North Knife River, northwest of Churchill,

Man., in 1953, also by Helge Larsen on north side of Seward Peninsula, Alaska, 1949, and by Jørgen Meldgaard at Sarqaq and Disko Bay, West Greenland, in 1953. This suggests that the early Arctic population spread slowly over a broad circumpolar belt, not by large migrations, and was well established in the Bering Sea region by the period of the Denbigh flint culture (8,000 or more years ago). America may first have been settled by people "slowly filtering down from the Arctic population" and not by successive waves of migration from Asia.

34886. GIDDINGS, JAMES LOUIS, 1909- . Ethnographic notes, Kobuk River region, Alaska. (Kiva, Apr. 1941. v. 6, no. 7, p. 25-28)

Contains a sketch of life of the present-day Eskimos in Shungnak village, the uppermost inhabited point on the Kobuk River, visited by the writer in 1940. Details are given on the salmon fishing and drying (chiefly woman's work), making of nets (formerly of willow bark, now of cotton twine), types of dwellings and use of the oil lamp, method of cooking by means of heated rocks, birch bark canoes, relations with other tribes, and warfare. This people is a branch of coastal Mahlemutes, most of them profess the Quaker faith, however, some old traditions have been preserved. The reindeer breeding is steadily decreasing.

Short description of the museum noted for its Pleistocene fauna of Central Alaska, ethnographical objects and large archeological collections, giving one of the world's most complete records of the western Eskimos. Founded by Charles E. Bunnell in 1921, the museum is growing rapidly. Its educational importance and program for the future is outlined.

34890. GILES, STUART, and R. F. LAW. Heating arctic huts. (BuDocks technical digest, Apr. 1954. no. 44, p. 12-16, illus., graphs, diagrs.)

Results are presented of field and laboratory tests conducted by the U.S. Naval Civil Engineering Research and Evaluation Laboratory to define the fundamental problem and choose the type of equipment most suitable for heating and ventilating prefabricated military buildings in the Arctic. Stratification of room air produced by oil-fired heaters was eliminated by hanging circulating fans directly overhead. Curves graphically illustrating the effectiveness of the circulating fans are included. The effectiveness of simple mechanical thermostats in controlling room temperature was demonstrated. Recommendations are made concerning specifications of heating equipment for 20 x 48 ft. advanced base prefabricated buildings in the Arctic. **Copy seen:** DLC.

Contains the results of a field investigation in 1918 by the author of the Port Chatham and Red Mountain chromite deposits, near the southwestern extremity of Kenai Peninsula on the south coast of Alaska. Outlines previous investigations of the deposits. Describes the general geology of the deposit areas, and the general features of the ore deposits. Detailed descriptions are then given of the Port Chatham deposits, the quality of the ore, tonnage, and mining and shipping methods, and of the Red Mountain deposits, their tonnage, and the mining and shipping practices. The conclusions cover amount of ore, methods of mining, concentration, transportation to tidewater, shipment, and markets. Author's bulletin on these deposits in *Arctic Bibliography*, No. 5746.

34904. GIVERHOLT, HELGE, 1911- North Norway in international politics. (Norseman, Jan.-Feb. 1954. v. 12, no. 1, p. 1-6) ref.

The part played by northern Norway (especially the Narvik region) in World War II is briefly described. Strategic importance of the region with regard to air and sea routes and its lack of importance as an operational area for land forces are discussed. Difficulties in defending the North were an important factor in Norway's decision to join the North Atlantic Treaty Organization rather than a Scandinavian Defence Union. Problems created by the northern provinces in Norway's present foreign policy are noted.

34909. GJESSING, GUTORM, 1906— . Changing Lapps; a study in culture relations in northernmost Norway. London, London School of Economics and Political Science, 1954. 67 p. (*Its*: Monographs on social anthropology, no. 13) 61 refs.

Based chiefly on lectures and papers delivered by the writer during autumn 1952 in London and Vienna. A brief general outline is given of present economic and social conditions of the Lapps. Contact between them and Scandinavians in prehistoric and historic times, pre-Christian religion and shamanism, Christian missionaries, and Laestadianism (a revivalistic Lutheran movement) and its influence are discussed. Three communities are treated in detail: Laksefjordbotn, a sea-Lapp community; Karasjok, permanently settled inland Lapps; Kautokeino, stronghold of reindeer nomadism in Finnmark.

Copy seen: CaMAI.

34910. GJESSING, GUTORM, 1906— . Kulturkontakt i Karasjok. (Norske videnskapsakademi i Oslo. Årbok, 1953, pub. 1954, p. 20–21) Text in Norwegian. **Title tr.:** Cultural contact in Karasjok.

Contains summary of a lecture, delivered at the meeting of the Norwegian Academy of Sciences on Apr. 10, 1953, when the author's ethnographic field work in summer of 1950 was reported. History of the Karasjok region is briefly outlined; the process of disintegration of the Lapp culture is sketched and factors in this process are discussed: industrialization, new religion (teachings of P. Lastadius), cultural influence of Norwegians and Finns, etc.

Copy seen: DSI.

34911. GJESSING, GUTORM, 1906— . The Lapps of Norway. (Norseman, Jan.–Feb. 1954. v. 12, no. 1, p. 40–45)

Lapp population in Norway is estimated at about 20,000. The sea Lapp and agricultural inland Lapp population is growing while that of the reindeer herders (about ten percent of all the Lapps) remains stable. Economic conditions of these three groups throughout the northern provinces of Nordland, Troms, and Finnmark are sketched retrospectively, and the cultural and economic changes taking place within recent years are discussed in some detail. The economy of the inland Lapps now rests on agriculture rather than on hunting and fishing, and that of the reindeer herders increasingly upon sale of reindeer products and a settled way of life.

34913. GLADTSIN, IVAN NIKOLAEVICH, 1884— . Kurumy. (Priroda, 1930, no. 4, col. 436–44) Text in Russian. **Title tr.:** Kurumy: polygonal formations.

Contains description of peculiar large accumulations of rock debris moving slowly down the slopes, product of the frost weathering; in Siberia this phenomenon is called "kurumy", and it has been met and observed in Yakutia, Ural, Altay, Kola Peninsula, Svalbard, Bjørnøya, and many other arctic and non-arctic regions. The origin, development and forms of "kurumy", and their connection with glaciation, permafrost and solifluction are discussed; and the mechanics of their movement is explained. The development of high mountain terraces as products of weathering by frost and

water and their relation to "kurumy" are also noted and discussed.

34919. GMELIN, JOHANN GEORG, 1709-1755. D. Johann Georg Gmelins . . . Reise durch Sibirien, von dem Jahr 1733 bis 1743. Göttingen, A. Vandenhoecks seel., Wittwe, 1751-52. 4 v.: v. 1, [24] 464 p.; v. 2, [30] 652 p.; v. 3, [20] 584 p.; v. 4, 692 [8] p.; tables, plates (partly fold.), plans, 4 fold. maps. Text in German. **Title tr.:** Johann Georg Gmelin's . . . journey, through Siberia from 1733 till 1743.

The author, a German naturalist, went to Russia as professor of the Academy of Sciences in 1733, and was assigned to the Academy's party in the second Kamchatka expedition, together with the historian G. F. Müller, L. Delisle de La Croyère, the astronomer, S. P. Krashenninnikov (then still a student) and others. He left Petersburg in Aug. 1733 and traveled via Tobol'sk, Tomsk, Yeniseysk, and Krasnoyarsk to Irkutsk; made a trip to Nerchinsk, Selenginsk and Kyakhta; reached the Lena River and, by boat, Yakutsk in Sept. 1736. During the wintering there, all his papers and collections were destroyed by fire. The following summer, in view of possible shortage of provisions, only Krashenninnikov and La Croyère, with a small party continued the journey to Kamchatka, while Müller and Gmelin turned back. They wintered in Kirensk and Irkutsk, went down the Angara and Yenisey to Yeniseysk, and after a boat

trip to (Novaya) Mangazeya, or Turukhansk, in May-July 1739, they moved westward by easy stages and reached Petersburg in Feb. 1743. In his diary of the ten-year journey, Gmelin notes distances covered, and describes the regions traversed: their rivers, lakes, mountains, flora and fauna, routes, settlements and their inhabitants, factories and mines, etc., economic conditions, industry and commerce. Though he never reached Kamchatka, Gmelin consistently terms his narrative "Tage-register der Kamtschatkischen Reise" (Diary of the Kamchatka Journey). His notes on the wintering in Yakutsk (v. 2, p. 393-555) include references to the Yakuts: their dwellings, food and cooking, medical therapy (treatment of frostbite), mortuary customs, industry, shamanism, beliefs, festivals, sacrifices (of calf), etc. The phenomenon of permafrost as observed in Yakutsk, is reported (the first time in scientific literature?) and its probable connection with the absence of spring and well water in Yakutia discussed (*ibid.*, p. 521-23). The story is recounted of P. Lassennius' death in 1735 during the wintering in the vicinity of Buorkhaya Bay, of Pronchishchev's and the Laptev's expeditions (p. 410-71), as well as that of the Cossack Penda (p. 528-31). The routes from Yakutsk to Okhotsk and methods of travel are briefly reported (v. 2, p. 540-42). Tungus living on the upper reaches of Nizhnyaya Tunguska River (dwellings, customs, marriage, clothing, implements, methods of tattooing, etc.) are described (v. 2, p. 641-52). The account of Gmelin's trip to Mangazeya or Turukhansk (v. 3, p. 189-240) includes notes on the Yenisey River and its tributaries (Podkamen'naya Tunguska, Nizhnyaya Tunguska, Turukhan), with a plan of the Yenisey at the confluence of the Turukhan (p. 201). Meteorological and hydrological (spring level of the Lena and Yenisey) observations were carried out. Other participants in the expedition, G. F. Müller, L. Delisle de La Croyère, V. J. Bering, A. I. Chirikov, S. P. Krasheninnikov, G. W. Steller, J. E. Fisher, and their mutual relations are characterized. Gmelin's comments on the Russian population and administration throughout the diary are in part derogatory. His main interest was in botany, and the scientific results of his journey were presented in his *Flora sibirica*, 4 vols.

1747-69 (*Arctic Bibliography*, No. 5827). Russian explorations in northeastern Asia, plans and achievements of the Great Northern Expedition, as then known, are reviewed in the preface to v. 1; those to v. 2 and 3 include remarks on native peoples in Asia: Tungus, Yakuts, Kamchadals, and others. Fold maps of parts of Siberia as then known, are attached to each volume.

1755,

of the peoples of this country, the course of the main rivers, location of the mountain ranges, large forests, mines, with all the facts of natural history peculiar to this country; made by Mr. Gmelin, professor of chemistry and botany, at the expense of the Russian Government. Free translation from the German original by Mr. de Keralio.

French translation of author's *Reise durch Sibirien*, 1751-52, q. v. The text, divided by the translator into 81 chapters, is considerably abridged and partly rearranged; prefaces, tables and maps are omitted; a supplement is added (v. 2, p. 263-304) giving the story of the Great Northern Expedition, including Bering's and Chirikov's voyages. Index is attached, v. 2, p. 305-324.

Two other French versions of Gmelin's work appeared under the title *Voyage au Kamtschatka par la Sibérie* (Journey to Kamchatka through Siberia) in Antoine F. Prévost, *Histoire générale des voyages*, Paris, 1748-70, t. 69 (1768) p. 191-536, t. 70 (1768) 473 p., t. 71 (1768) 420 p., plates, maps; also "Nouvelle édition," Amsterdam, 1747-79, t. 24 (1779) p. 94-499, 14 plates, plans, 2 fold. maps. Both editions are a free rendering of the content of Gmelin's book, giving only a partial translation of the original text, the compiler's name not indicated.

34922. GMELIN, OTTO, Editor. Johann Georg Gmelin 1709-1755: der Erforscher Sibiriens; ein Gedenkbuch. München, Otto Gmelin, 1911. v, 146 p., port. 47 refs. Text in German.

Title tr.: Johann Georg Gmelin 1709-1755, the explorer of Siberia; a memorial.

Contains a foreword by the editor, an extensive account by R. Gradmann (p. 3-20) of Gmelin's life and appraisal of his work, followed by excerpts from his publications: unabridged translation of the introduction to *Flora Sibirica*, 1747-1769 (*Arctic Bibliography*, No. 5827); foreword and selected chapters from *Reise durch Sibirien*, 1751, q. v. Among the topics dealt with are: mosquitoes, severe cold, popular medicine (Yakut treatment of frostbite with cow dung), Steller's expedition to Kamchatka, etc. Appendix is selected correspondence between Haller, Linnaeus, Steller, and Gmelin; works by and about him.

34931. GOGOLEV, Z. V. V institute ōzyka, literatury i istorii Īakutskogo filiāla Akademii nauk SSSR. (Voprosy istorii, 1954. no. 1, p. 181) Text in Russian. **Title tr.:** In the Institute of Language, Literature and History of the Yakut branch of the Academy of Sciences, U.S.S.R.

Contains a report on work done or in progress. The second volume of *Istoriā Īakutii* is ready for printing; it covers the period from Yakutia's incorporation into the Russian state to the October Revolution; vol. 3, on Yakutia in the Soviet period, is in preparation. The Institute organized a series of field investigations of the life, culture and ethnic composition of the population of the Anabar, Olenek, Kolyma, Alazeya, Indigirka, and Yana basins. Expeditionary work in the lower Lena region planned for 1954 is to investigate the basic changes which have taken place in the life and culture of Yakuts, Tungus, Lamuts, Yukaghirs, and Chukchis in the Soviet period. Scientific sessions are held every year on past and present-day

life in Yakutia; proceedings of the second and third session are published and those of the fifth and sixth in preparation. A collective work *Äkutia v XVII veke* (Yakutia in the 17th century) was published in 1953. Another collection of articles is in preparation which should show the leading role of the Russian nation in the development of peoples of Yakutia. In the field of ethnography much attention is paid to the Yakut material culture. M. M. Nosov finished preparation of a four-volume album in colors on Yakut dwellings, clothing, ornaments, and implements. A collection of documents on 17th century history of Yakutia, and one of Yakut historical legends and traditions are in preparation. The library has 120 large epic songs (*olonkho*, several thousand lines each), and more than 600 legends on the origin of Yakuts and their individual clans.

34932. GOLDER, FRANK ALFRED, 1877-1929. Bering's voyages. An account of the efforts of the Russians to determine the relation of Asia and America. Vol. 1: The log books and official reports of the first and second expeditions, 1725-1730 and 1733-1742. With a chart of the second voyage by Ellsworth P. Bertholf. New York, American Geographical Society, 1922. x, 371 p. 15 illus. incl. plates, maps, facsim.; fold. plate. (*Its:* Research series, no. 1) Index to v. 1-2, pub. at end of v. 2.

Following an introductory account of the geographical knowledge of the North Pacific in the early 18th century, is Bering's report on his first expedition 1725-30: the journey across Siberia to Kamchatka, construction of a ship, the *Sv. Gavril*, and voyage through Bering Strait (p. 6-20). Another voyage on the *Sv. Gavril* is reported (p. 21-24): in May-Sept. 1732, by M. S. Gvozdev, who sighted the American coast but did not know it. Bering's second expedition is presented (p. 36-269) in its basic document: the text translated: "from the hitherto unpublished originals in the Russian archives, (1), of the log book of Bering's vessel, the *St. Peter*, covering the period from April 23, 1741, to August 9, 1742, and describing the preparation of the ship for sailing, the voyage from Kamchatka to the Alaskan coast and return to Bering Island (June 4-Novem-

ber 6, 1741), the wreck of the *St. Peter* and the death of Bering, the life of the survivors on that island, and the building of a replacing vessel, the hooker *St. Peter*; and (2) of the log book of the hooker *St. Peter* from August 10 to September 7, 1742, describing the return voyage to Petropavlovsk, the home port in Kamchatka (August 13 to 27), and the attempted continuation of the voyage to Okhotsk and final return to Petropavlovsk (September 1 to 6)."

A narrative report by Sven Waxell in command of the *Sv. Petr* on Bering's death is given (p. 270-82) recounting the course of the voyage, encounters with Alaskan natives, ravages of scurvy among the crew, hardships of wintering on Bering Island, and return to Kamchatka.

The journal, June 4-Oct. 12, 1741, kept aboard the second vessel, the *Sv. Pavel*, commanded by A. Chirikov, and the latter's report to the Admiralty College are given (p. 283-327). The log of the *Sv. Pavel*, not given by Golder, has been recently published in Russian by D. M. Lebedev, q. v. These documents recount the course of the voyage, separation of the two vessels on June 20, 1741, discovery of the Alaskan coast (Cape Addington) July 20, landing, loss of 15 men ashore, encounters with natives, the voyage westward along the Alaskan coast, the Aleutians, thence to Kamchatka. Sufferings from scurvy are stressed. Personnel of the expedition is listed: the tracks of the two vessels are charted and discussed by E. P. Bertholf.

Appended (p. 349-71) is an exhaustive account of the mss. and published source materials relating to the Bering voyages, their antecedents; and some successors.

Copy seen: DLC.

34933. GOLDER, FRANK ALFRED, 1877-1929. Bering's voyages . . . vol. 2: Steller's Journal of the sea voyage from Kamchatka to America and return, on the second expedition 1741-1742. Translated and in part annotated by Leonhard Stejneger. New York, American Geographical Society, 1925. xi, 291 p. 30 illus. incl. plates, facsim., maps; 2 fold. maps. (*Its:* Research series, no. 2) Index to this and item above is pub. at end of this vol.

First complete English translation of Steller's journal; made from an (evidently) direct transcript of the German naturalist's original ms., and collated

throughout with Pallas' published version of another, not quite complete, ms. (*Arctic Bibliography*, No. 37599). The textual studies together with extensive annotations by Golder and (in botany and zoology) by Stejneger, make this probably the definitive edition of a basic document on Alaska.

Steller's were the first observations by a European scientist in the Alaskan area. Of the several narratives by participants in the second Bering (essentially an exploratory) expedition, Steller's journal is the sole scientific record. Appended (p. 189-241) is *Topographical and physical description of Bering Island* . . . English translation of Steller's:

Topographische und physikalische Beschreibung der Beringsinsel, welche im ostlichen Weltmeer an der Küste von Kamtschatka liegt. (*In*: Pallas, P. S. Neue nordische Beyträge zur physikalischen und geographischen Erd- und Völkerbeschreibung, Naturgeschichte und oekonomie. St. Petersburg and Leipzig, vol. 2, 1871, p. 255-301). This deals with position and size of the island, its topography and geology, land visible from it, its climate and earthquakes, streams, animals and plants. Included here (from other of Steller's works) are extensive accounts of the blue fox, sea otter, sea lion, fur seal and the sea cow. These first-hand descriptions of typical animals of the Bering Sea region, the first by a European scientist, are natural history classics, those of the sea otter and sea cow are here translated and annotated by Dr. Stejneger.

Appended also (p. 242-49) is English translation of Steller's letter to J. G. Gmelin, dated from Bolshaya River, Kamchatka, Nov. 4, 1742, summarizing his scientific observations during the badly conducted voyage, etc.

Bibliography of Steller's works published and unpublished, works about Steller, and the Commander Islands, is added (p. 251-66), also a preface, discussing sources, and (p. 1-7) a biographical appraisal of Steller, stressing his traits of temperament as well as intellect, somewhat more objective in viewpoint than Stejneger's.

Copy seen: DLC.

34934. GOLD'IN, M. I. Mikroby v vozdukhe. (*In*: Atmosfera zemli, 1953, p. 361-72, 7 illus.) Text in Russian. **Title tr.:** Microbes in the air.

Contains account of the horizontal and vertical distribution of microbes in the

atmosphere. The paucity of microbes in the Arctic and after snowfall, as well as in the upper atmosphere and over open seas, is discussed and explained.

Copy seen: DLC.

34935. GOLDMAN, EDWARD ALPHONSO, 1873-1946. The wolves of North America. (*Journal of mammalogy*, Feb. 1937. v. 18, no. 1, p. 37-45)

Includes physical description of two new subspecies of wolves, *Canis lupus labradorius* found in northern Quebec, and *Canis lupus ligoni* found in Alexander Archipelago and probably adjacent mainland of Southeast Alaska. Description includes type locality, distribution, general character (comparisons with other subspecies), color, skull, measurements, remarks, number of specimens examined and location. Appended is list of 19 species and subspecies of wolves including eight from Alaska, northern Canada, and Greenland.

34940. GOLOVNIN, VASILII MIKHAILOVICH, 1776-1831. Puteshestvie Rossijskogo Imperatorskogo shliupa *Diany* iz Kronshtadta v Kamchatku, sovershennoe pod nachal'stvom Flota Lef'tenanta (nyne Kapitana 1-go ranga) Golovnina v 1807, 1808 i 1809 godakh. Sanktpeterburg, Morskaja tipografiia, 1819. 2 v.: 241 p. map; 234 p. fold. plates. Text in Russian. *Title tr.:* The voyage of His Russian Majesty's sloop-of-war *Diana* from Kronshtadt to Kamchatka, under the command of Lieutenant (now Captain) Golovnin in 1807-1809.

Immediately after the successful round-the-world voyage of the *Nadezhda* and *Neva* under the command of Kruzenshtern and Lisianskii, the Russian-American Company decided to send more ships to Kamchatka and Alaska. In 1806 the *Neva* left Kronshtadt on a new voyage; and in July 1807 she was followed by the *Diana* under V. M. Golovnin sailing via Cape Horn to the Pacific. Strong adverse winds prevented entrance into the Pacific however, and the little vessel was forced to turn about and to sail for the Cape of Good Hope. There she was detained due to "outbreak of the Russo-English war," but managed to escape, sailed south of Australia and west of New Zealand and reached Kamchatka in Sept. 1809. The

purpose of the expedition and its preparation are discussed in v. 1, p. 1-29; the approach to Kamchatka, the panoramic view of its coasts and volcanoes, and the first impression of Petropavlovsk are described in v. 2, p. 225-34. Folded map shows routes of the *Diana*.

Copy seen: DLC.

34941. GOLOVNIN, VASILII MIKHAILOVICH, 1776-1831. Puteshestvie vokrug svieta po povel'eniū Gosudarīa Imperatora sovershennoe na voennom shliup'e Kamchatka v 1817, 1818 i 1819 godakh flota kapitanom Golovninym. Sanktpeterburg, Morskaja tipografiia, 1822. 2 v.: 4 p. l., 512, xlv p.; 3 p. l., 205, cxx p.; fold. tables, fold. plates, fold. maps. Text in Russian. *Title tr.:* The round-the-world voyage made by His Majesty's command on the sloop-of-war *Kamchatka* in 1817-1819, by Captain of the Navy Golovnin.

Reprinted (considerably abridged) in a modern edition listed below.

Narrative, a general description of the voyage is given in v. 1. Its purpose was to take naval and military equipment to Kamchatka, investigate conditions in colonies administered by the Russian American Co. and describe the northwest coast of America from 60° to 63° N. lat. The 900-ton vessel sailed from Kronshtadt in June 1817 via Cape Horn and the Pacific and reached Petropavlovsk in Kamchatka, Apr. 1818; after a two-month stay, the *Kamchatka* continued her voyage via the Commander Islands, along the Aleutians to Kodiak and Sitka; thence in Aug., via Cape of Good Hope, returned to Kronshtadt in 1819, completing her round-the-world voyage. Narrative includes description of Petropavlovsk and the Russian administration in Kamchatka (p. 141-54); the visit to waters off Bering and Medny Islands, and story of a party of 11 Russian hunters under Shipitsyn, who, left by the Russian American Co. in 1805, stayed there 7 years (p. 157-67). Kodiak Island is described (p. 185-201), its soil, pastures, forests, mammals, birds, fishes, plants, natives; as is Sitka, then known as Novo-Arkhangelsk (p. 202-224). Critical comments are made upon the map of Kodiak compiled by Lisianskii, whose errors almost caused the wreck of the *Kamchatka* (p. 186-88, x-xvii and v. 2, fold. map). Eight supplements include: (1) a list of the expedition's personnel, among them F. Litke, F. Vrangeli,

F. Matūshkin and P. Koz'min; (2) Golovnin's castigation of a United States Congressional committee's report proposing to found a colony in California, together with his defense of far-reaching Russian claims in America (p. xviii-xxxix). The Company's forts and settlements are listed (fold. table) with geographic coordinates and statistical data of inhabitants (total 8446) by regions and by settlements.

Vol. 2 contains technical, astronomical and navigational notes, including such from the voyage Petropavlovsk - Kodiak-Sitka (p. 37-80). The supplements include (p. lxxxiii-lxxxv) the story of the discovery of Nunivak Island in July 1821 by Captain Vasil'ev on the *Otkrytie* and *Blagonamerennyi*. Fold. maps include one of Chiniak Bay on Kodiak Island, 1 in.: 1 geog. mi., with Lisianskii's inaccuracies marked in red; also one of Sitka Sound, 1 in.: 1 Italian mi. (both at end of v. 2). Golovnin's report on conditions in the Russian possessions in America was not published in this narrative, but printed later by the government, cf. *Arctic Bibliography*, No. 18238, pt. 1.

Copy seen: DLC (p. 1-2 in v. 2 and map of Russian possessions in America, mentioned in the list of maps, are missing in this copy).

34942. GOLOVNIIN, VASILII MIKHAILOVICH, 1776-1831. Sochineniia [Pod red. i s primechaniiami I. P. Magidovicha] Moskva-Leningrad, Izd-vo Glavsevmorputi, 1949. 507 p. illus., maps (incl. 1 fold.), plans, facsimis. Text in Russian. **Title tr.:** Works, edited with notes by I. P. Magidovich.

A previous edition of Golovnin's works: pub. in 1864, 5 v. in 2, with extensive illustrative matter is at MiU.

Contains editor's biographical sketch of Golovnin (p. 5-13), with a map showing routes of his three major voyages, as introduction to his principal works which follow:

Puteshestvie shliupa "Diana" iz Kronshadtta v Kamchatku, sovershennoe pod nachal'stvom flota leitenanta Golovnina v 1807, 1808 i 1809 gg. (Voyage of sloop-of-war *Diana* from Kronshadt to Kamchatka, made under command of Lieutenant Golovnin in 1807, 1808 and 1809), p. 15-123, illus., facsimis., maps. This is a somewhat abridged reprint of the first edition, 1819, q. v., omitting

folded plates and folded map, but adding illustrations, text maps, also (p. 116-23) 190 editorial notes. The arrival in Kamchatka in Sept. 1809, and coasts and general appearance of peninsula are described on p. 114-16.

Zapiski Vasilii Mikhailovicha Golovnina v plenu u iaponsev v 1811, 1812 i 1813 godakh (Memoirs of V. M. Golovnin on captivity in Japan in 1811-13), p. 125-269.

Puteshestvie vokrug sveta na shliupe "Kamchatka" v 1817-1818 i 1819 godakh flota kapitana Golovnina (Round-the-world voyage on sloop-of-war *Kamchatka* in 1817, 1818 and 1819 by Captain of the Navy Golovnin), p. 271-448, illus. maps (1 fold.). This is a new edition of the first part (v. 1) only, of the two-volume first edition published in 1822, q. v. The text is slightly abridged, and all the supplements of pt. 1 as well as whole of pt. 2 (v. 2) are omitted. This new edition, however, has numerous illustrations, mostly taken from other old publications, and 306 notes by the editor, I. P. Magidovich, elucidating the text, (p. 440-48). The description of the arrival in Kamchatka, the stay at Petropavlovsk in Apr.-June 1818, visit to the Komandorskiye Islands, voyage along the Aleutians, visit to Kodiak, and the stay at Novo-Arkhangelsk (Sitka), is given on p. 310-40. This description includes notes on the visited places: their administration and government (governor of Kamchatka, P. I. Rikord, Russian-American Company in Alaska), inhabitants (Kamchadals, Aleuts, Indians, Russian settlers and traders), settlements, plants, birds, fishes (Kodiak Island).

Opisanie primechatel'nykh korableni, preterpennykh russkimi moreplavateliami (Description of remarkable shipwrecks suffered by Russian seafarers), p. 449-504. **Copy seen:** DLC.

Russian. **Title tr.:** Remains of heathen beliefs among the Mansi. Also issued separately, with *Kul't medv'ediā* (No. 29324), under title: *Slēdy ōzychestva u inorodtsev Sēvero-Zapadnoi Sibiri*. [Remains of heathen religion among the natives of northwestern Siberia] Moskva, Tip. E. G. Patanov, 1888 (91 p.).

Contains detailed description of the old Vogulian beliefs in gods and spirits. The deities and their functions, shamanism and sacrifices, myths of gods and heroes, legends of creation and doomsday, beliefs in the nether world are outlined from narratives of several natives who, though baptized, continued to practice their heathen rites in secret. Appended (p. 70-73) are texts of 29 superstitions, and 23 divinations from snow. The author visited the Voguls in 1885, living in the vicinity of Berezovo and Obdorsk, and on the Rivers Severnaya Sos'va, Sygva and Kazym, getting information first hand.

3494. GOODMAN, JOE R. and T. G. THOMPSON. Characteristics of the waters in sections from Dutch Harbor, Alaska, to the Strait of Juan de Fuca and from the Strait of Juan de Fuca to Hawaii. (Washington (State). University. Publications in oceanography, Dec. 1940. v. 3, no. 3, p. 81-103, and appendix, p. 1-48, 2 text maps, 15 graphs, 53 tables) 8 refs. This paper was read at the Sixth Pacific Science Congress, Berkeley, Calif., 1939.

Includes data on temperature, chlorinities, phosphates and nitrates, and current vectors for a section started at 50°38' N. 172°45' W., just south of the Aleutians, southeast to 48°10' N. 125°40' W. Samples were taken July 29-Aug. 5, 1935 at a series of stations 150 miles apart, and during late Sept. 1938 over almost the same route at hourly intervals. Four distinct water masses were recognized: Alaskan stream (51°17'-53°52' N. 165°-155°10' W.); southern Aleutian stream (53°52'-52°13' N. 155°10'-140°24' W.); Washington drift (52°13'-49° N. 140°24'-126°47' W.); coastal water (49°-48°30' N. 126°47'-125° W.). These water masses are discussed. Data from the samples are given in tables.

A preliminary report by the head of the expedition on the geological, prospecting, and biological work carried out in 1932 in the lower Pechora River basin and in adjoining regions of Malozemel'skaya and Bol'shezemel'skaya Tundras. Quaternary deposits were studied; no outcrops of bedrock were found; the discovery of ocher, high grade clay and lake iron ore deposits is noted; reindeer food, and parasites were investigated. cf. *Arctic Bibliography*, No. 5924.

(1) t. 71, p. 137-69; (2) t. 72, p. 160-81; (3) t. 73, p. 191-203) Text in Russian. *Title tr.:* Contribution to the history of the conquest of the Northern Sea Route; Bering's expedition of 1732-1743.

Contains texts of three documents recently found in the archives of White Russian Academy of Sciences in Minsk, signed by V. Bering and his chief aides.

The first, dated Petropavlovsk, Apr. 18, 1741, is the explorers' point-by-point (in all, 25) reply to a letter of Apr. 14, 1740, in which the Empress Anna, Senate and Admiralty accuse the expedition of slowness in fulfilling its task. Among other things, resettlement of Russians, Tungus and prisoners from Yakutsk to the Okhotsk region is mentioned (point 18); also conflicts between expeditionary personnel and Chukehis, Koryaks, and Kamchadals (points 20-21); Bering urges more humane treatment of natives (points 22-24). Introduction and comments to the text are given by P. Gorin. A summary in German with additional comments are given by L. L. Breitfus in Petermanns geographische Mitteilungen, 1936, Jahrg. 82, Heft 1, p. 16.

The second and third documents are the Collegium of the Admiralty's instructions of Feb. 28, 1733, to Commander Bering and Captain Shpanberg respectively.

34968. GRAINGER, E. H. Polychaetous annelids of Ungava Bay, Hudson Strait, Frobisher Bay and Cumberland Sound. (Canada. Fisheries Research Board. Journal, Sept. 1954. v. 11, no. 5, p. 507-528, table) 46 refs. *Calanus* series, no. 5.

A collection of 74 species (representing 27 families) is described. Specimens were collected primarily by the *Calanus* expeditions of 1947-1952, and supplemented by D. V. Ellis' collections made in summer 1953 in Baffin Island waters, also by nine species from Hudson Strait, Cumberland Sound, and Somerset Island, provided by E. and C. Berkeley. Depth range of the collections is from the inter-

tidal area to 274 meters. Twelve species are new records for the Canadian Eastern Arctic and two are new for North America. For each species, distribution in the Canadian Arctic and the world, location where collected, and references are given. These fauna show a closer relationship to those of West Greenland and to the Arctic-Subarctic region north of the Atlantic, than to the Pacific and Alaska, but a Pacific faunal element comprises nearly six percent of the Eastern Arctic species. **Copy seen:** CaMAI; DI.

34969. GRAINGER, E. H. Station list of the *Calanus* expeditions, 1951-52, together with Frobisher Bay stations, 1948, 1950 and 1951, and Resolution Island stations, 1950. (Canada. Fisheries Research Board. Journal, 1954. v. 11, no. 1, p. 98-103, 3 text maps) *Calanus* series no. 4.

"A list is given of 61 stations where biological or oceanographic observations or collections were made by the *Calanus* in Ungava Bay, Frobisher Bay, Cumberland Sound and adjacent waters, during the 1951 and 1952 seasons. Five additional stations, occupied independently from the *Calanus* in Frobisher Bay in 1948, 1950 and 1951, and at Resolution Island in 1950, are included."—Author's abstract. Information for each station includes lat. and long., depth (meters) and type of work done. Station locations are shown on maps.

no. 3, p. 508-510, 3 graphs, table) 5 refs.

Calculations of the atmospheric refractive index for radio waves were made from 151 aircraft soundings taken June 23-Sept. 30, 1952 in connection with the shore survey of northern Canada. From June 23 to Aug. 23, the area of operations extended from Great Slave Lake north to Coronation Gulf, east across Keewatin District to southwestern tip of Foxe Peninsula and northwestern Ungava. From Sept. 4-30, operations were in eastern Quebec and southern Labrador. Sounding techniques and computation of index of refraction are described, and a comparison is made between the results and the NACA 60 percent relative humidity standard atmosphere.

34973. GRANT, ULYSSES SHERMAN, 1867-1932. Gold on Prince William Sound. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 97)

Notes the occurrence of small amounts of placer gold on a few of the streams flowing into Prince William Sound—a few are listed. Describes a small gold-bearing quartz vein on Jackpot Bay, west of Chenega Island.

Copy seen: DLC.

34974. GRANT, ULYSSES SHERMAN, 1867-1932. Mining and prospecting on Prince William Sound in 1909. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 164-65)

Describes the results of mining operations on the various copper and gold deposits of the Prince William Sound region in 1909. Mentions finds of native copper at the Fleming Spit copper prospect.

Copy seen: DLC.

34975. GRANT, ULYSSES SHERMAN, 1867-1932, and D. F. HIGGINS. Notes on the geology and mineral prospects in the vicinity of Seward, Kenai Peninsula. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 98-107, map)

Contains brief discussions of the geology of parts of this area and descriptions of the copper and gold prospects. The copper ores (chalcopyrite) occur in sheared and brecciated zones in greenstones in a belt along the east shore of Resurrection Bay, east of Seward. The gold quartz veins described are at Seward, and on Falls Creek and in Moose Pass.

Copy seen: DLC.

34976. GRANT, ULYSSES SHERMAN, 1867-1932, and D. F. HIGGINS. Preliminary report on the mineral resources of the southern part of Kenai Peninsula. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 166-78, fold. maps)

Contains a brief discussion of the geology of the southern part of Kenai Peninsula (p. 166-68) and descriptions of the mineral deposits. The gold lodes of the Moose Pass and Kenai Lake regions and the gold placers at Quartz Creek in the Moose Pass region are described, as are the gold lodes along the south shore of Kenai Peninsula; chromite deposits of Red Mountain and Port Chatham near Seldovia (p. 168-69); copper deposits near Seward (p. 170); antimony deposits near Kenai Lake north of Seward; and coal at Port Graham (p. 178).

34977. GRAVES, G. VAN A. International Ice Patrol. (Marine observer, Apr. 1953. v. 23, no. 160, p. 109-110, 2 illus.)

Contains brief survey of duties of the Patrol. Ice observation and oceanographic work are carried out by U. S. Coast Guard with two B-17 bombers and a cutter; merchant ships provide additional information. Twice-daily bulletins are broadcast to shipping during the ice season. Charts of sea surface temperatures and currents are prepared and oceanographic surveys made in Baffin Bay and Labrador Sea. Records of icebergs calving from West Greenland glaciers and of those drifting south of 48° N. are kept. Investigation of sensitivity of radar to ice is being made.

Copy seen: DLC.

34978. GRAWITZ, P. BUSSE. Experimentelle Entzündungen durch schwache physikalische Reize: Wärme, Kälte, Ultraviolettlicht. (Virchows Archiv für pathologische Anatomie und Physiologie 1953. v. 323, no. 6, p. 622-28, illus.) 7 refs. Text in German. **Title tr.:** Experimental inflammation through weak physical stimuli: warmth, cold, ultraviolet light.

Among the stimuli, application of ice bags caused "formation" of first leucocytes in the subcutis in 120 minutes; inflammation in this case is strongest six hours after exposure; exposure of less than five minutes caused no reaction.

34981. GRAY, GRATTAN. The Yukon's coming alive again. (Maclean's magazine, Nov. 15, 1954. v. 67, no. 22, p. 35, 46-50, illus., text map)

Contains popular description of the Yukon-northern British Columbia hydroelectric power project, planned by Northwest Power Industries Ltd. and Quebec Metallurgical Industries Ltd. (part of Frobisher-Ventures) to begin in 1956. Flow of the upper Yukon River will be reversed by a series of dams and diverted through the mountains to generating stations near Taku Inlet, on the Southeast Alaska-northern B. C. boundary. Plans for a refining and smelting industry are noted. History of the Yukon River basin

is outlined from Gold Rush days of the 1890's to the present.

Copy seen: DLC.

34982. GRAY, JOHN A. Land birds at sea. (Condor, Sept.-Oct. 1945. v. 47, no. 5, p. 215-16)

Includes notes on two short-eared owls (*Asio flammeus*) which were seen at 57°24' N. 150° 10' W, 70 miles northwest of Kodiak Island.

Copy seen: DSI; MH-Z.

34983. GRAY, L. R. Navigation equipment of the ANT-25. (Aero digest, Aug. 1937. v. 31, no. 2, p. 34, 62, sketch)

Description and location of navigation equipment aboard the Russian monoplane ANT-25 (NO-25) with which Chkalov established a non-stop flight record of 6262 miles from Moscow to California via the North Pole, June 18-20, 1937. Included were a conventional-type sun compass, directional gyro, bubble sextants, Hughes marine chronometer, and radio homing device. Three books of two-star altitude curves covered latitudes from 30° to 60°, on a larger scale than Weems'.

34984. GREAT BRITAIN. COMMON-WEALTH SHIPPING COMMITTEE. Report on Hudson Bay marine insurance rates, 1930-[1954]. London, H. M. Stationery Off., 1930-1954. In progress. 13 v. (Its: 1st-13th reports).

Reports no. 1-9 (pub. 1930-1939) deal with seasons 1929-1938, and no. 10-13 (pub. 1951-1954) with 1950-1953. No reports were issued for the 1939-1949 seasons, but the 10th report (pub. 1951) gives a record of vessels loading from Churchill 1931-1939, 1946-1950. The first, or general, report, pub. 1930 contains a survey of ice conditions as reported by the Hudson Strait Expedition 1927-1928, from records of the Canadian Government 1927-1928, and from records for the period 1824-1894.

Appendices contain (1) extract from report of the Hudson Strait Expedition, 1927-1928; (2) list of marine casualties in Hudson Strait and Bay 1910-1929; (3) loss of two Hudson Bay Co. vessels in Ungava Bay and Labrador Sea; and (4) extract from reports in 1929 and 1930 on direction-finding stations in Hudson Bay and Strait. Subsequent reports contain information for each season on ice conditions and length of navigation season, number of commercial vessels calling at Churchill, and navigation and weather problems, including number of days with fog. Relation of these factors to insurance rates is considered. Table of insurance premiums for vessels with, and without, gyro compass, 1931 to date, are appended to reports from 1935 onwards. *Fold. maps* in 10th to 13th reports show location of lights, coast and direction-finding stations, and meteorological stations in Hudson Bay and Strait. **Copy seen:** DLC.

34985. GREAT BRITAIN. HYDROGRAPHIC DEPT. The Admiralty list of lights, fog signals and visual time signals, volume 7, 1953. Corrected to 16th December, 1953. Western side of South Atlantic Ocean and East Pacific Ocean (eastern coast of South America south of Cape Orange; west coasts of South and North America and Hawaiian Islands). London, Hydrographic Dept., Admiralty, 1953. 528 p. text map.

Includes Gulf of Alaska, Bering Sea and Strait, and Beaufort Sea. Information is given on name of signal or station, year established, position, number, color and power of lights, character and period, height above high water, miles seen in clear weather, description of structure or vessel, remarks. **Copy seen:** DN-HO.

34986. GREAT BRITAIN. HYDROGRAPHIC DEPT. The Admiralty list of lights, fog signals and visual time signals, volume 8, 1953. Corrected to 17th January. Western side of North Atlantic Ocean: north of Canadian border; Labrador, Newfoundland, Canada and Canadian Arctic, west coast of Greenland. London, Hydrographic Dept., Admiralty, 1953. 298 p. text map.

Includes west coast of Greenland, Hudson Bay and Strait, coast of Labrador. Information is given on name of signal or station, year established, position, number, color and power of lights, character and period, height above high

water, miles seen in clear weather, description of structure or vessel, remarks.

Copy seen: DN-HO.

34987. GREAT BRITAIN. HYDROGRAPHIC DEPT. The Admiralty list of lights, fog signals and visual time signals, volume 11, 1954. Corrected to 24th March, 1954. Greenland Sea: west and north coasts of Norway (north of 60° north), Spitsbergen, the Faeroes, Iceland and the east coast of Greenland. London, Hydrographic Dept., Admiralty, 1954. 390 p. text map.

Information is given on name of signal or station, year established, position, number, color and power of lights, character and period, height above high water, miles seen in clear weather, description of structure or vessel, remarks. **Copy seen:** DN-HO.

34988. GREAT BRITAIN. HYDROGRAPHIC DEPT. The Admiralty list of lights, fog signals and visual time signals, volume 12, 1954. Corrected to 20th April. Arctic Ocean: north coast of Finland, White Sea, and Arctic Russia to Bering Strait. London, Hydrographic Dept. Admiralty, 1954. 191 p. text map.

Includes coasts bordering easternmost part of Greenland Sea, and those of Barents, White, Kara, Laptev, East Siberian, and Chukchi Seas, also Bering Strait and Sea. Information is given on name of signal or station, year established, position, number, color and power of lights, character and period, height above high water, miles seen in clear weather, description of structure or vessel, remarks. **Copy seen:** DN-HO.

34989. GREAT BRITAIN. HYDROGRAPHIC DEPT. Glossary of terms used on Admiralty charts and in associated publications, 1953. Part V. Ice and snow terms. London, Hydrographic Dept., Admiralty, 1953. 15 p. (*Its*: Professional paper, no. 11. 2d ed.) Prepared with assistance of the Scott Polar Research Institute, for use of the Dept.

Some 275 terms are presented alphabetically with definitions; also (p. 13-15) as a summary of ice conditions, grouped: sea ice, river and lake ice, and ice of land origin and their subdivisions.

Copy seen: DN-HO.

34990. GREAT BRITAIN. HYDROGRAPHIC DEPT. New photographs of H. M. surveying ship *Vidal* and the new

29 ft. surveying motorboat. (International hydrographic review, Nov. 1954. v. 31, no. 2, facing p. 7 and p. 165, 6 illus., fold. plan)

Contains four photographs of the *Vidal* and two photographs and plan of the motorboat. The *Vidal* is first survey ship fitted with a helicopter hangar; it has also an air-conditioning plant capable of extracting heat from sea water under arctic conditions. **Copy seen:** DN-HO.

34991. GREAT BRITAIN. HYDROGRAPHIC DEPT. Newfoundland and Labrador pilot, vol. II, comprising the eastern coast of Newfoundland from Cape Saint Francis to Cape Bauld; Belle Isle; and the eastern and northeastern coasts of Labrador from Cape Saint Charles to Cape Chidley. 8th ed., 1953. London, Hydrographic Dept., Admiralty, 1953. xlv, 655 p. 93 illus., charts (2 fold. in text), tables. Prepared by W. S. Bardwell.

This edition supercedes *Arctic Bibliography*, No. 6098 and Supplement No. 7 (1951). It has a more detailed description of formation of sea ice, ice movement, International Ice Patrol Service, ice limits and seasons, and icebergs; also a section on ice navigation (p. 27-39). Sailing directions for the Labrador coast (p. 365-591) include more detailed treatment of the Hamilton Inlet-Lake Melville region (p. 457-88). *Appendices* list ports available for under-water repairs; principal ports, with particulars of depths, etc.; spots suitable for magnetic observations. **Copy seen:** DN-HO.

34992. GREAT BRITAIN. HYDROGRAPHIC DEPT. Norway pilot, vol. 3, comprising the northwestern and northern coasts of Norway from Halten to Jacobselva. 4th ed., 1953. London, Hydrographic Dept., Admiralty, 1953. li, 833 p. 94 illus., charts (incl. 1 fold. in text), tables. Prepared by F. M. Hodgson.

Contains general information on physical features, flora and fauna, government, population and industry of northern Norway; ice conditions, currents, tides, signals, submarine cables, magnetic variations, lifesaving, buoyage and marks, pilotage, regulations, communications, passages, and climate, with glossary of Norwegian words. Sailing directions include (p. 266-757) the coastal region from Bodø (67°17' N. 14°25' E.) north and west to Varangerfjorden, including coastal island groups, Lofoten, Vesterålen, Sørøy.

Copy seen: DN-HO.

34993. GREAT BRITAIN. HYDROGRAPHIC DEPT. Rising and setting diagrams for high northern latitudes. [London], Hydrographic Dept. of the Admiralty, July 1952. 11 p. incl. diagrs. Prepared by W. A. Scott, H. M. Nautical Almanac Office.

Supplements information given in the *Abridged nautical almanac*. For sunrise and sunset and for civil, nautical and astronomical twilight, the basic diagram is a zenithal equidistant projection of the north polar region above latitude N. 70°, with meridians marked in hours from 0-24. Superimposed on the basic diagram are curves, generally given for every fifth day, which are the projections of the circles corresponding to zenith distances of the sun of 90°50' (for sunrise and sunset), 96° (for civil twilight), 102° (for nautical twilight), and 108° (for astronomical twilight). For moonrise and moonset the basic diagram is a gnomonic projection of a portion of the polar region north of latitude N. 70°.

Copy seen: DN-HO.

34994. GREAT BRITAIN. HYDROGRAPHIC DEPT. South and east coasts of Korea, east coast of Siberia, and Sea of Okhotsk pilot, comprising the coast from the southwestern extreme of Korea to Mys Shipunsky on the east coast of Kamchatka; and Quelpart, Tsushima and Sakhalin. 4th ed., 1952. London, Hydrographic Dept., Admiralty, 1952. liii, 666 p. 161 illus., charts incl. 1 fold., tables. Supplement no. 1, 1954. 12 p. Prepared by I. M. Hodgson.

This edition supersedes *Arctic Bibliography*, No. 6100 and Supplement no. 10 (1951), to which this is similar in scope and areal coverage. Information on Russian coasts and adjacent waters may not be up to date, readers are cautioned, as exchange of hydrographic information has been abandoned by the U. S. S. R. **Copy seen:** DN-HO.

34995. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 2, 1953, relating to the Arctic pilot, vol. II, fifth edition, 1949, corrected to 13th October, 1953. London, Hydrographic Dept., Admiralty, 1953. 26 p. 9 illus. Prepared by H. V. Silk.

Contains deletions, additions, and substitutions to *Arctic Bibliography*, No. 6095, superseding Supplement no. 1 (1951). Includes all information affecting this pilot contained in Notices to

mariners, up to and including no. 2402 of 1953. Twenty-one new and altered geographical names are listed.

Copy seen: DN-HO.

34996. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 3, 1953, relating to the Arctic pilot, vol. I, fifth edition, 1947, corrected to 15th September, 1953. London, Hydrographic Dept., Admiralty, 1953. 24 p. Prepared by H. V. Silk.

Contains deletions, additions, and substitutions to *Arctic Bibliography* No. 6094, superseding Supplement no. 2 (1951). Includes all information affecting this pilot contained in Notices to mariners, up to and including no. 2140 of 1953. A Russian transliteration table approved by the Permanent Committee on Geographical Names and a list of five new and altered geographical names are included.

Copy seen: DN-HO.

34997. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 3, 1953, relating to the Arctic pilot, vol. III, fourth edition, 1947, corrected to 28th April, 1953. London, Hydrographic Dept., Admiralty, 1953. 18 p. 2 illus. Prepared by H. V. Silk.

Contains deletions, additions, and substitutions to *Arctic Bibliography* No. 6096, superseding Supplement no. 2 (1951). Includes all information affecting this pilot contained in Notices to mariners, up to and including no. 979 of 1953. Twenty-five new and altered geographical names are listed.

Copy seen: DN-HO.

34998. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 3, 1953, relating to the Southeast Asia pilot, third edition, 1948, corrected to 11th September, 1953. London, Hydrographic Dept., Admiralty, 1953. 29 p. Prepared by H. V. Silk.

Contains deletions, additions, and substitutions to *Arctic Bibliography* No. 6101, superseding Supplement no. 2 (1951). Includes all information affecting this pilot contained in Notices to mariners, up to and including no. 2108 of 1953. Thirteen new and altered geographical names are listed.

Copy seen: DN-HO.

34999. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 3, 1952, relating to the White Sea pilot, first edition, 1946, corrected to 29th July,

1952. London, Hydrographic Dept., Admiralty, 1952. 83 p. Prepared by C. A. Bamford.

Contains deletions, additions, and substitutions to *Arctic Bibliography* No. 6103, superseding Supplement no. 2 (1950). Includes all information affecting this pilot contained in Notices to mariners up to and including no. 1436 of 1952. One hundred-twenty new or altered geographical names are listed.

Copy seen: DN-HO.

35000. GREAT BRITAIN. HYDROGRAPHIC DEPT. Supplement no. 8, 1953, relating to the Bering Sea and Strait pilot, second edition, 1940, corrected to 11th August, 1953. London, Hydrographic Dept., Admiralty, 1953. 68 p. Prepared by F. M. Hodgson.

Contains deletions, additions, and substitutions to *Arctic Bibliography* No. 6097, superseding Supplement no. 7 (1952). Includes all information affecting this pilot contained in Notices to mariners, up to and including no. 1868 of 1953. Eighty-seven new and altered geographical names are listed.

Copy seen: DN-HO.

35001. GREAT BRITAIN. MEDICAL RESEARCH COUNCIL. COMMITTEE ON THE CARE OF SHIPWRECKED PERSONNEL. A guide to the preservation of life at sea after shipwreck. London, H. M. Stationery Office, 1943. 21 p., illus. (Medical Research Council war memorandum no. 8)

Contains a comprehensive but concise guide on preparations and precautions aboard ships; action in emergency; and procedure, ailments, treatment, etc., in the lifeboat. Included are instructions on clothing and protection against cold and wind; food; frostbite and immersion feet and their treatment; etc.

Copy seen: NNX.

35002. GREAT BRITAIN. METEOROLOGICAL OFFICE. Meteorological report on arctic Scandinavia (north of 66½° N.). London, 1944. 44 p. text maps, diagr., graph, tables. (*Its:* Aviation meteorological report, no. 22) 10 refs.

"General climate, synoptic meteorology and seasonal weather for the parts of Norway, Sweden and Finland above the Arctic Circle are described. Freezing of lakes and rivers, state of the ground and snow cover, and airplane icing are discussed briefly. . . The number of days

required for ice to grow to a certain thickness at certain constant air temperatures is tabulated. Data are tabulated for certain stations on the mean depth and number of days with snow, and the average number of days with snowfall."—SIPRE.

Copy seen: DWB.

35003. GREAT BRITAIN. METEOROLOGICAL OFFICE. 1000-500 mb. thickness North America to Europe, 1946-1951. Monthly means and extremes. London, H.M. Stationery Off., 1953. 38 p. 36 charts. (*Its:* Meteorological reports, no 13) 2 refs.

Contains circumpolar charts of the thickness in feet of the atmospheric layer between the 1000 mb. and 500 mb. surfaces. Charts show mean geographical distribution of the thickness lines and the extreme northerly and southerly positions of lines representing a given thickness. Data were derived from radiosonde observations once daily over North America, the North Atlantic, and Europe.

Copy seen: CaMAI; DWB.

35004. GREAT BRITAIN. ROYAL AIR FORCE. CENTRAL NAVIGATION AND CONTROL SCHOOL, Shawbury, England. North polar flights of "Aries." Shawbury, England, 1945. 10 pts. in 9 v. Mimeographed. (*Its:* EANS report no. 45 24)

Pt. 1, *Narrative*, (29 p. 27 illus. on 6 plates, text map) consists of a general description of the expedition as seen through the eyes of the captain, D. C. McKinley. The Lancaster *Aries* of the Empire Air Navigation School, Shawbury, England with a crew of 11 completed the series of flights during the period May 10-26, 1945. They were: Shawbury-Iceland-North Pole via Jan Mayen and East Greenland-Iceland; (2) Iceland-Disko-Goose Bay, Labrador-Boothia Peninsula 73°30' N. 98°W.-Dorval; (3) Dorval-Whitehorse, Yukon Territory; Whitehorse-Shawbury. A total ground distance of 19,965 nautical miles, 9,245 of which lay within the Arctic Circle, was covered in a period of 109 hours and 40 minutes. Planning, equipment, crew composition and duties, and general descriptions of each route flown are discussed.

Pt. 2, *Navigation* ([50] p. 3 illus. text map, 2 fold. charts, graphs, tables) contains account of the navigational preparation before flight, the procedure carried out during the flights, and the results of

observations made by the two navigators. Included are descriptions of the methods of navigation employed, such as the use of the A. P. I. in conjunction with the Greenwich grid system, the use of the Pole as an assumed position when plotting astro sights, and the various methods of maintaining direction. Facsimile copies of the logs and charts are appended together with a carefully determined reptot of the tracks. The Pole was approached with the sun dead ahead so that the sun sights should not be affected by wander. Course was set to take the aircraft slightly east of north, so that a form of "finding the island" technique could be used, running down the sun position line and using moon position lines to check ground speed.

In pt. 3, *Aircraft performance* (12, 4 p.) details are given concerning preparation of the Lancaster Mk. I with Lancaster-type nose and tail fairings; ranges and fuel, oxygen, icing, stowage, crew comfort, engine performance and maintenance, oil consumption, engine handling technique, airframe performance and maintenance, electrical and radar services, also maintenance organization and duties are described. Full de-icing equipment for all essential services, defrosting equipment for the astrodomes, suitable cooking and food storage facilities, torque-meters to reduce power wastage are among recommendations made. The flight engineer's log for the flight to the North Pole is appended.

Pt. 4, *Meteorology* ([29] p. 15 maps, 8 of them fold., diagrs., cross-sections, tables) presents a full account of the meteorological observations with emphasis on the three main flights: Reykjavik, Iceland to geographic North Pole and return; Goose Bay, Labrador, to North Magnetic Pole to Dorval, Quebec; Whitehorse, Yukon to Shawbury, England. To illustrate the forecasting problems and the accuracy of their solution, for each of these flights the following are reproduced: the pre-flight synoptic chart; the complete flight forecast; the flight meteorological log; a "post-facto" synoptic chart for a time approximately in the middle of each flight. Meteorological logs for two of the shorter flights are also included. A table showing average climatological conditions for April, May and June in Iceland and open sea around Greenland, Greenland Ice Cap, Canadian Arctic, and the Polar Basin is included.

Pt. 5, *Compasses and terrestrial magnetism* ([53] p. illus. 5 maps of which 1 fold., 16 graphs, 11 fold., tables) contains existing information on compasses and terrestrial magnetism in the Arctic, equipment carried by the *Aries*, installation details of equipment, observation techniques and methods of analysis. Instruments carried included four direct reading magnetic compasses of very high magnetic moment, but of varying degrees of damping, two astro compasses; a flux-valve type of dip meter; a three-axis flux-valve magnetometer; a special directional gyroscope; a latitude and departure air position indicator; an automatic observer to record all required readings. A track plot of the North Polar flights of the *Aries* is included. Appended are Royal Observatory North Polar isomagnetic charts showing computed values of magnetic elements, a table of differences between charted and computed values of magnetic elements, along aircraft's tracks as supplied by the Royal Observatory, and values of magnetic elements derived from *Aries* observations. Recommendations are made concerning magnetic compasses to be chosen for future polar flights.

Pt. 6, *Communications and radar* (12, 8 p. tables) contains discussion of radio wave propagation in the Arctic, communication procedure during flight, and radar operations. Standard R. A. F. communications and navigational radar equipment was carried. The frequency arranged for almost all the W/T communications was 6,500 kilocycles per second. Contact was continuously maintained with Reykjavik, Goose Bay, and Gander on the flight to the Magnetic Pole. Loran operations, including stations used, areas in which signals were received, and value of readings obtained are summarized. Search-type radar (H2S) was of considerable help in navigation, particularly in detecting ice-free coastlines or lakes (but not icebound coasts) when cloud cover prevented use of maps. A radar altimeter was used continually until half-way through the final flight when it failed due to a fractured antenna. True height was obtained by this altimeter. A frontispiece indicates the routes followed by the aircraft and the location of the various radio stations contacted. The W/T log for the geographic North Pole flight is appended.

Pt. 7, *Photography and geographical*

data ([29] p. 40 illus., fold. map, fold. graph, tables) contains a selection of topographical photographs (Greenland, Canadian Arctic Islands, etc.) of 70 made during the various flights. A 35 millimeter Leica and an R. A. F. Pistol Camera MK. II were used. Sea and coastal ice observations are described. Photographs of typical radar (H2S) returns and a list of their positions are included. Floe ice and the edge of ice packs were clearly visible on the screen; icebergs gave strong returns. A series of radar altimeter recordings was made on the east-west crossing of the Greenland plateau from Cape Gustav Holm to Disko Island. The vertical section obtained from these altitude measurements is appended, illustrating heights of ground along the track. A frontispiece shows the location of the topographical photographs, a catalog of which is also included.

In pt. 8, *Medical aspects and safety equipment* (24 p., tables) measures taken to give the *Aries* crew the best chance of survival after forced landing in the Arctic and reasons which governed final selection of equipment and rations are discussed by R. H. Winfield, the medical officer. An account is given of the observations of medical interest made during the flights, including oxygen supply, cold, noise, food, icing, and crew considerations. Lists of flying clothing, emergency personal kits, emergency kit bags, miscellaneous equipment are appended, as well as food values of rations carried, arrangement of meals, and cooking instructions.

Pt. 9, *Notes on the history of arctic exploration* (10 p. fold. map) deals mainly with the role of aircraft, and the navigation instruments and methods hitherto employed. The outline was prepared by members of the *Aries* expedition in searching for data regarding previous arctic flights. Those of Andr  e 1897, Wellman 1907, Nagurski   1916, Amundsen 1925, Byrd 1926, the *Norge* 1926, Wilkins 1926-28, Nobile 1928, aerial exploration in 1930-36, and Russian flights of 1937 are noted, and routes of the principal flights of 1925-1938 shown on map.

Pt. 10, *Bibliography* (p. 11-17) contains 96 references arranged chronologically (1909-1945) in seven sections: historical information; polar navigation; aircraft operation; meteorology; terrestrial magnetism and magnetic compasses; radio; equipment and safety measures

The references were largely compiled from Harold Gatty's report on polar navigation published in 1944.

Almost all Yakutia is hunting grounds, with an average of 100 sq. km. per hunter. The annual catch of arctic fox, squirrel, ermine, etc., valued at seven million rubles, plays a significant part in the economy, though by no means all the hunting facilities are utilized. Organizational defects of the hunting industry are discussed, and the regional students (kraevedy) called upon to raise hunting efficiency by study of its conditions.

Description of the Avro Canada CF-100 heavy, two-seat all-weather, jet fighter which can operate out of small arctic airfields. Initial development and production are discussed. The chief characteristics are a high rate of climb, small turning circle, unusually good low-speed handling qualities and short take-off and landing runs. A maximum speed at sea level of 640 miles per hour and an initial climb rate of 17,500 ft. per minute if boosted by Solar afterburners are believed to be among the performance characteristics.

Report based on flights over the Canadian Arctic Mar. 20, 1946-Sept. 4, 1947, by the 4149th AAF Base Unit of the Air Materiel Command with members of the RCAF in the air crews. Flights were made in support of a chain of loran stations and of the Exercise Musk Ox, and photography, mapping, and reconnaissance were carried out in addition to regular duties. Of the many flights so made, only results of 16 long-range,

across unsurveyed, uncharted, or little known areas, are reported here, with date, route, distance and time of each indicated. Each of the following regions is treated in turn, the topography, ice conditions, snow coverage, drainage, and relation of coastlines and other features to existing maps, being presented from the aerial viewpoint, and excellent photographs included for all: northern Baffin and Bylot Islands, Devon Island, Melville Bay, Ellesmere Island, Axel Heiberg Island, Arctic Ocean, the Ringnes Islands, Meighen Island, Norwegian Bay (including Cornwall Island), Bathurst Island (including Cornwallis), Somerset Island, Prince of Wales Island, Boothia Peninsula, King William Land and Queen Maud Gulf, Yukon Territory and Districts of Mackenzie and Keewatin, Coronation Gulf, Victoria, Melville, Borden, Prince Patrick, Banks Islands, and northeastern Alaska. *Appendices:* (1) the magnetic compass in arctic air navigation, by K. C. Maclure; (2) grid navigation, by K. C. Maclure; (3) maps and charts selected for map-reading reference and plotting.

35011. GREENAWAY, KEITH ROGERS, 1916- . Direction in high latitudes. (Canadian surveyor, July 1953. v. 11, no. 5, p. 35-38, 7 diagrs.)

Contains discussion of measurement of direction north of 65° N. A plotting chart based on a polar projection such as the widely used Lambert conformal is required. The grid system of orientation, and methods used in grid navigation to overcome difficulties introduced by the Lambert conformal projection are described. The most suitable plotting charts for long-range air navigation (in the higher latitudes) are the polar stereographic (or Ney) for 90° N. - 67° N., and the Lambert conformal (cone constant .8) for 67° N. - 42° N.

35012. GREENAWAY, KEITH ROGERS, 1916- . New navigational methods for northern flying. (Canadian aviation, Sept. 1953. v. 26, no. 8, p. 44-45, 115-21, 6 figs.)

Description of the grid system, techniques and procedures for polar navigation. The projections most widely used in polar navigation are the polar stereographic and the modified Lambert conformal (Ney's). Complications introduced with this projection are overcome

by using a curved grid corresponding to the direction of grid north, or a straight-line grid with a correction for convergence applied to all bearings involving longitude. Limitations on the use of the magnetic compass near the Pole, convergence of isogonals near the magnetic and geographic poles, and polar twilight conditions are described.

35013. GREENBERG, MARVIN. Aerial celestial positioning of ground control points for arctic mapping. (Navigation, Dec. 1949. v. 2, p. 98-99)

A procedure, proposed by navigators of the U. S. Air Force 72nd Photographic Reconnaissance Squadron (VLR), for obtaining "tie in" positions by aerial celestial observations is outlined. The method is a careful coordination of celestial sights and radar bearings over or near points of prominent radar returns. The accuracy for practical purposes was estimated in the order of five nautical miles maximum ($\pm 2-5$ nautical miles).

COPY seen: DLC.

35014. GREENLEES, STEPHEN. Indian canoe makers. (Beaver, Summer 1954. Outfit 285, p. 46-49, 5 illus.)

Important role of the canoe in the economy of the North is explained, and its structural requirements stated. Most of those used by natives of the Hudson-James Bay region are made by Indians at the Hudson's Bay Company's canoe factory at Rupert House, northern Quebec ($51^{\circ}29'$ N. $78^{\circ}46'$ W.). The old birchbark freighters, canvas-covered canoes (since 1902), and modern craft built (since 1920) upon a mould with iron ribs, are described in turn. Some 1,300 of the last have been produced in two basic styles, 16-23 ft. long. Their uses, performance, etc., are indicated.

35017. GRESSARD, ROBERT. Gradients thermiques. (In: Expéditions polaires françaises. Expédition arctique, 1948-1953. Hivernage au Groenland, 1950-1951; rapports préliminaires, 1953. Série scientifique no. 22, p. 137-38, 2 photos.) 2 refs. Text in French. **Title tr.:** Thermic gradients.

The program in atmospheric physics (measurement of thermic gradients) at the Central Station (Expéditions polaires françaises) on the Greenland icecap was initiated by Gérard Taylor who reported in *Arctic Bibliography*, No. 32392. His work was continued by the writer July 18, 1950-Apr. 28, 1951. Apparatus and methods are briefly described; no results are given. Three daily readings were made throughout the period. Apparatus was left functioning when writer left with party for the coast on May 1, 1951.

Presence of foxes in increasing numbers at the Central Station (Expéditions polaires françaises) on the Greenland

icecap is discussed. Those seen by the wintering party 1950-1951 are described (including one killed and examined). Many traces were seen between the Central Station and the west coast. Conclusion was that animals normally lived near the inland ice border, making temporary excursions into the interior, and that they were drawn to the camps by curiosity and presence of food.

35021. GRIERSON, JOHN, 1909- . The arctic air route. (Flight, London, Sept. 14, 1944. v. 46, no. 1864, p. 288-92, illus.)

Contains review of exploratory work done on the Arctic Air Route, including the American flights in Douglas biplanes in 1924, Locatelli's flight during the same year, the British Arctic Air Route Expedition of 1930, von Grönan's flight in 1931, Balbo's mass flight of 1933, the author's flights of 1933 and 1934 and Lindberg's survey flights of 1934. The two most important contributions up to 1939 were Lindberg's and the British Arctic Air Route Expedition. The author admits the fallacy of his former short stage conception of a trans-Atlantic route via Iceland, Greenland, and Labrador, but advocates the great circle aspects of the route in view of modern technical developments. Baffin Island as a site for a major emergency base and meteorological station is suggested.

After the 1912 eruption of Katmai Volcano, Alaska (58°16' N. 154°59' W.), no revegetation on the ash occurred for about 18 years. In 1930 colonization had started by leafy liverworts of the family Jungermanniaceae. An account of this colonization and a discussion of the physical and biological factors involved are given. Dominant position of the liverworts "as pioneers on the nitrogen-free ash appears to be due to their ability to thrive on a lower concentration of nitrogen compounds than the other plants, algae, mosses and seed plants whose disemules reach the habitat."

35050. GROCOTT, D. F. H. Navigation in high latitudes. (Institute of Navigation, London, Journal, Oct. 1953. v. 6, no. 4, p. 414-15)

Letter to the editor, questioning the use of the astrograph technique of homing to the Pole when double-box fixes had been obtained, as reported in Bower's article concerning the flight of the *Aries* (Arctic Bibliography, No. 28272). Bower answers that this technique was used purely for its training value since the *Aries* flight was a training mission. *Hughes'* tables were not used to obtain azimuth when the altitude was negative since no short-cut method equivalent to that used for calculating zenith distance appeared to exist.

35051. GRÖNAAS, OLAF. Developing north Norway. (Norseman, May-June 1951. v. 12, no. 3, p. 179-82, 5 illus.)

Contains brief survey of economic conditions and planning in Nordland, Troms, and Finnmark. The North Norway Plan is outlined: it was set up in 1951 to increase productivity and employment by developing industries requiring electric power, and enterprises based on such raw materials as fish and minerals. A Development Fund of, eventually, £10,000,000 capital, with special preferences in building and import licences, etc., are among Government plans for attracting industry into the North. Agriculture, fisheries, and mining are to be developed, also, with government aid, road and railway construction. A development period of about ten years is planned to provide employment for 10,000 people.

Contains discussion on improvement of economic conditions in Kamchatka. More population is needed, also well organized commerce and shipping, hitherto neglected by Russians and left to Americans. Natural resources of the country are outlined: an abundance of fur-bearers (sable, beaver, fox, wild reindeer, mountain sheep, etc.), fish, whales, cedar nuts, and precious metals, etc. (gold, amethysts, and pearls). Cattle breeding, grain and vegetable growing are possible. Among a population of about 5,000, were some 800 able Kamchadal hunters. The writer spent twelve years in Kamchatka.

35060. GROSS, FRED A., Jr., 1923- . The AAF approach to polar navigation. (Navigation, Sept. 1946. v. 1, no. 3, p. 47-49)

Excerpt from a paper presented at the Los Angeles meeting of the Institute of Navigation, June 26, 1946, on the U. S. Air Force navigation training program. The course consists of 46 hrs. of instruction, orientation and practice, including special applications of DR, radar, loran, radio pilotage and celestial procedures to the polar regions. The polar latitudes are defined as extending from the 85th parallels to the poles. Arguments in favor of using the grid in high latitudes are advanced. Use of the Greenwich grid and astrocompass is explained.

35064. GRUENING, ERNEST HENRY, 1887- . The state of Alaska. N. Y., Random House, 1954. 607 p. 2 text maps, 3 graphs, maps on endpapers. refs.

Detailed analysis of the relations of the federal government and Territory from 1869, and of the economic forces conditioning Alaska's development. The writer, director Division of Territories from 1934, then Governor of Alaska during 1939-1953, gives (p. 3-22) a précis of Russian discovery and occupation 1741-1867, stressing that this determined Alaska's eventual incorporation within the United States instead of in the British Commonwealth. The early period of American administration is presented as one of federal neglect, with Alaska successively a military, customs, and (from 1884) a civil district with governor (p. 33-153); fur trade, fisheries, mining developments (coal, copper, gold) are

discussed in their political-economic aspects. Territorial status, election of delegate to Congress (1906), and establishment of a territorial legislature (1912) are chronicled. Through the years 1912-33 and 1933-54, termed eras of "indifference" then "growing awareness" on the part of the federal government (p. 155-319), exploitation of resources, political and industrial interests, population, effects of economic depression and war are described. "Alaska's pending problems" are discussed (p. 321-459) in regard to public lands, law enforcement, native claims, fisheries, sea and air transportation, highway and railroad construction. Finally, the struggle and ease for self-government, Alaska statehood, is presented. Extensive citation of sources, mainly government documents (p. 497-576), and a useful index are added. They make available, data on many phases of Alaskan life in a work which is essentially a chronicle of "stateside" dominance in government and industry and of Alaskans' efforts to achieve political and economic self-determination.

Text in Croatian. *Title tr.:* Therapy of angiospastic edema of the hand following frostbite, by intra-arterial application of novocain.

Contains an account based on experience with military cases in the winter of 1946-47, with information on symptoms, pathogenesis, etc. Novocain infiltration (without adrenaline) combined with warm air and physical therapy gave satisfactory results. *Copy seen:* DSG.

35066. GRUNDSTRÖM, HARALD, 1885- . Lapsk-svensk-tysk ordbok till Anta Pirak Jähtee saamee viessoom. Uppsala, 1939. 173 p. fold. map (Humanistiska vetenskapssamfundet i Uppsala. Skrifter, Bd. 31:3) *Title tr.:* Lappish-Swedish-German dictionary for Anta Pirak's book Jähttee saamee viessoom [q.v.].

Contains some three thousand words and expressions in Lappish with meanings given in Swedish, the latter translated into German by W. Schlachter.

Copy seen: DLC.

35067. GRUNDSTRÖM, HARALD, 1885- . Lulelappsk ordbok. København, E. Munksgaard, 1946-1952. 10 fasc.: vi, 1587 p. (Sweden. Landsmåls- och Folkminnesarkivet. Skrifter, ser. C:1) *Title tr.:* Lule Lapp dictionary.

The largest and most exhaustive Lapp dictionary, compiled on the basis of material collected by K. B. Wiklund, B. Collinder, and the editor who had over thirty years' experience among the Lapps as a clergyman. All the words are explained in German and occasionally in Swedish. This dialect spoken in the parishes of Gällivare and Jokkmokk in northern Sweden, has gradually achieved the position of the literature language: it is the only Lappish dialect still in use at public church service (the New Testament having appeared in it in 1903); it has been used in the promulgation of laws, and until 1918 in the Lapp schools. A list of given names for men and women, and family names is added (p. 1583-87).

Reviewed by T. A. Sebeok in *Language*, 1948, v. 24, no. 2, p. 244-50, with survey of Lappish dialects and literature on Lapp linguistics.

Contains text of paper presented at the annual convention of the American Association of Petroleum Geologists, Houston, Texas, Mar. 26, 1953, and at the Fourth Alaskan Science Conference, Juneau, Alaska, Oct. 1, 1953. The petroleum reserve, established in 1923, occupies about 37,000 sq. mi. on the arctic slope of northern Alaska. Geology and topography of the region are described. In 1944 the U. S. Navy began explorations in which the U. S. Geological Survey participated, and during which a large part of the reserve and adjacent areas were explored by geological and geophysical methods. To Dec. 1952, 35 test wells and 41 core tests were drilled on 18 structures. Two oil fields and one prospective field, two gas fields and four prospective fields have been discovered. For these fields, estimates of oil reserves range from 30 million to 100 million barrels, gas reserves from 370 billion to 900 billion cubic feet. **Copy seen:** DGS.

35082. GURINA, N. N. Arkheologicheskie issledovaniia v Karelii i v Leningradskoi oblasti. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1953. vyp. 51, p. 23-35, 2 illus., text map) 7 refs. **Title tr.:** Archeological investigations in Karelia and in the Leningrad region.

Includes description of excavations made in 1951 in the northern Karelia, on the shores of Lake Kufto and the Kem' River which connects it with the White Sea. Sixteen ancient settlements and sites were found, most of them belonging to the late neolithic (end of 2000 B. C.), and two are dated 1000-1300 A. D. The oldest sites were located near the mouth of the river. In a site 4 km. from the town of Kem', numerous artifacts were found: mostly ceramics very different in material and ornamentation, slate chisels and adzes, stone arrow points, quartz flakes and nuclei, etc. The ceramics are similar to those of Kola Peninsula and the stone arrow points are typical for the White Sea culture. The discovery may indicate that the Kola Peninsula was inhabited by people coming from Karelia.

Materialy i issledovaniia po arkheologii SSSR, 1953. no. 39, *Paleolit i neolit* SSSR, p. 408-420, 5 illus., text map) 10 refs. Text in Russian. **Title tr.:** On the dating of stone labyrinths of the White and Barents Seas.

Contains an attempt at dating the stone settings in circular labyrinthine array on the southern (near Kandalaksha) and northern shores of Kola Peninsula, investigated by the writer in 1947-1948. Two seasonal sites were found in the vicinity of the Kandalaksha labyrinth and another two at Zakhrebetnoye in the north of the Peninsula (in the latter region two hitherto unknown labyrinths were discovered by the author in 1948). While the labyrinths themselves disclosed no archeological artifacts or

graves, these sites produced flakes and quartz scrapers, also potsherds with admixture of asbestos. The labyrinths of Kola (some thirty now known) are divided into two groups and dated from about the end of the second to the beginning of the first millennium B. C. Their great antiquity is evidenced by the fact that the stones are half sunk into the ground and covered with a thick layer of decayed vegetation. Native names for the labyrinths and the legends about them show that their original purpose has been completely forgotten.

35084. GURINA, N. N. Pamiatniki epokhi rannego metalla na severnom poberezh'e Kol'skogo poluostrova. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Materialy i issledovaniia po arkheologii SSSR, 1953. no. 39, *Paleolit i neolit* SSSR, p. 347-407, 35 illus., text map, 2 tables) 25 refs. Text in Russian. **Title tr.:** Monuments of the early metal period on the northern shores of the Kola Peninsula.

The history is traced of a people who inhabited the very fringe of northern Europe in the bronze and the beginning of the iron age. They had still chiefly a stone age culture, although a few pieces of bronze and iron were found. The study is based on relics found in the burial grounds on Ostrov Bol'shoy Oleniy, and two sites on Ostrov Bol'shoy Yekaterinskiiy. On the first small island (69°13' N. 33°29' E. in Kol'skiy Zaliv) 11 graves were excavated by A. V. Shmidt in 1928 (see *Arctic Bibliography*, No. 15948), another ten were excavated by the writer in 1947-1948, and 25 graves were despoiled in 1935 by a local, unskilled "archeologist". The two sites on the other adjacent island were found and explored by the writer in 1947-1948. Detailed description is given of the ten graves and two sites, and of the rich store of stone and bone artifacts: implements for hunting and fishing; tools for working on bone, hide, and wood; objects of adornment and cult; ceramics; supplies of raw material laid in the graves; and objects of undetermined purpose. The decoration of the objects from Bol'shoy Oleniy Island is especially dealt with (p. 393-402) and extensively illustrated. Some affinities with Lapp culture and that of arctic hunters generally, are indicated. Karelian influence is evident, as is the relationship of these remains

with the graves discovered on the Yuzhnyy Oleniy Ostrov in Lake Onega.

35085. GURVICH, I. S. Ėtnografičeskaja ekspeditsiia v bassein r. Indigirki; predvaritel'nyĭ otehet. (Akademiia nauk SSSR. Institut etnografii. Kratkie soobščeniia, 1953. vyp. 19, p. 28-42, 6 illus., fold. map) Text in Russian. **Title tr.:** The ethnographic expedition to the Indigirka River basin; a preliminary report.

The writer, an interpreter and some guides traveled 1040 km. by boat and horse, mid-July-mid-October, 1952, and explored the regions of Khonu (66°28' N. 143°14' E.), Abyy (68°25' N. 145°08' E.), Allaykha (70°30' N. 147°25' E.), and Russkoye Ust'ye (71° N. 149°26' E.), down the lower Indigirka, investigating ethnic composition, culture and life of the local Yakuts, Tungus, Yukaghirs and Russians. The clans and *naslegs* of the Tungus and Yakuts are named, their settlements located and social organization outlined. The Yukaghirs are being absorbed by Tungus, and small ethnic groups generally are disappearing rapidly. The leveling process is aided, e. g., by bringing Tungus, Yakut, and Russian families together in the same kolkhoz. The language of communication is Yakut. Economic conditions and changes after collectivization are discussed in more detail. The chief occupation of the Tungus was hunting and reindeer breeding; cattle and horse breeding, also fishing have been recently introduced by the kolkhozes, but difficulties arise in teaching the fishing trade to Tungus who are born hunters. Yakuts bred horses before collectivization, and now attempts are made to revive reindeer breeding among them. The Yakuts of Abyy have adopted the fishing techniques and equipment of the Russian settlers. The Allaykha region has a mixed population of old Russian settlers, Yakuts, and groups of Tungus-Yukaghirs. The Yukaghirs, chiefly reindeer hunters, nomadize on the eastern bank of the Indigirka. The

material culture of both Tungus and Yakuts shows many affinities with that of their kinsmen in the Sredne-Kolymsk region. The origin and history of the old Russian settlers, centered around Russkoye Ust'ye near the mouth of the Indigirka is sketched. Fishing and dog breeding has been their chief occupation, supplemented by hunting of wild reindeer and geese; recently polar fox farming was attempted. The Russians have their own dialect with many loan words from the Yakuts and Yukaghirs, and have preserved much of their folklore: epics, tales, customs, superstitions, etc. Clothing and food, forms of dwelling and other features of material culture among the natives and Russians are described. Shamans and sorcerers have been liquidated, although in 1932, 33 still remained in the Abyy region. Schools and medical help are mentioned.

35087. GURVICH, I. S. Soviet research in the history of Yakutia. (VOKS. Vsesoiuznoe obščestvo kul'turnoĭ svyazi s zagranițsei, Bulletin, July-Aug. 1954, no. 4 (87), p. 33-39, 6 illus.) Text in English.

Review of archeological, anthropological and folkloristic investigations carried out in Yakutia during the Soviet period. A. P. Okladnikov's historical-archeological expedition to the Lena, 1940-1943 is noted among others, also the writer's expedition in 1951-1952, to study the ethnic composition and culture of the population of the Kolyma and Indigirka River basins. The origin of the Yakut people, their migration, contact with other ethnic groups (e. g. Tungus), occupation and acculturation are outlined. Their complex origin is indicated: the basic component was a Turcic-speaking ethnic group from the southern Baykal area, which merged and intermingled with aboriginal Si-

berian ethnic groups (Paleo-Siberians, Tungus) at various times. Yakut folklore indicates that their ancestors once lived in some southern steppes. Russian old settlers on the lower Kolyma and Indigirka, and their ancient traditions are also mentioned. **Copy seen:** DLC.

Contains brief and fragmentary sketches of the Soviet achievements in exploring unknown or little known regions of the U.S.S.R.; based on published materials and supplemented by notes on changes in geography of the country due to large hydrotechnical projects. Included are (titles translated):

Changes in the map of the Arctic (p. 20-43): an account of exploration and mapping of Severnaya Zemlya (Ushakov's expedition 1930-32, p. 21-32), discovery of Ostrov Vize, checking maps of Novaya Zemlya and Vrangeli Island, Akkuratov's flights to the Pole of Inaccessibility in 1941, Papanin's expedition to the North Pole in 1937, explorations of the Gydan and Taymyr Peninsulas, etc.

Discovery of the Cherskiy Range and investigation of the Kolyma Basin (p. 44-77), with account of I. D. Cherskiy's expedition in 1891-92, S. V. Obruchev's Indigirka expedition in 1926, and his Kolyma expedition of 1929-1930.

Recent investigations of the Indigirka Basin; changes in the map of the far Northeast of Asia (p. 78-88) mentions: investigation of glaciers in the Suntar-Khayata Range (watershed between the Indigirka and Okhota Rivers), and in the Buordakh Mts. (watershed between the Moma River and its tributary the Buordakh) by L. L. Berman's expedition

in 1946; aerial investigations of the Koryak Mts. by I. G. Nikolaev and D. M. Kolosov in 1937, and of the Chukotka mountains by S. V. Obruchevev in 1933 are also considered. Of 203 notes appended to the text, some hundred refer to arctic explorations. **Copy seen:** DLC.

35110. HAGG, E. L., and G. H. HANSON. Motion of clouds of abnormal ionization in the auroral and polar regions. (Canadian journal of physics, Dec. 1954. v. 32, no. 12, p. 790-98, 10 fig.) 3 refs.

Examination of records taken in rapid succession at ionospheric stations Baker Lake (64.3° N. 96.0° W.). Fort Chimo (58.1° N. 68.3° W.) and Resolute Bay (74.7° N., 94.9° W.) show three distinctive types of echoes corresponding to clouds of ionization in motion. One type is ascribed to clouds of sporadic E moving horizontally over the station. In the second type, clouds of ionization descend vertically from the F region to the E region, while the third type appears to be from clouds moving at extremely high velocities in the E region. Reflections of the second and third types have been seen only at stations in, or north of the auroral zone. The characteristics of the echoes, cloud velocities and other associated phenomena are discussed.

eosinophils and rectal temperatures of rats. (American journal of physiology, June 1954. v. 177, no. 3, p. 361-66, illus. tables) 35 refs. **Other authors:** H. A. Zander, M. W. Houghlum and H. R. Mühlemann.

A morning "low" and a night "high" were observed in rectal temperature of rats. The temperature reaction to the recording procedures also showed significant day-night differences.

Copy seen: DLC.

35116. HALBERG, FRANZ, and others. Relation of 24-hour rhythm in body temperature to lighting conditions and to the adrenal. (Federation proceedings, Mar. 1953. v. 12, no. 1, pt. 1, p. 59) **Other authors:** L. Levy and M. B. Visscher.

Contains report on experiments with mice, suggesting "that adrenal mechanisms which have been shown to control periodicity in number of eosinophils, contribute also to the maintenance of the 24-hour rhythm in body temperature."

Copy seen: DLC.

35117. HALBERG, FRANZ, and M. B. VISSCHER. Temperature rhythms in blind mice. (Federation proceedings, Mar. 1954. v. 13, no. 1, pt. 1, p. 65)

Contains a study of rhythms in rectal temperature of blinded mice and controls kept in an alternating, 12 hr. light-darkness regime. A shortening of the cycle length to 23 hrs. 20 min. was noted after blinding. Several months after blinding, periodic exogenous stimuli other than light may resynchronize the intrinsic periodicity with the 24-hr. periodic environment.

HALE, HORATIO, see Boas, F. First general report on Indians of B. C. 1890. No. 33639.

35118. HALE, MASON E. Lichens from Baffin Island. (American midland naturalist, Jan. 1954. v. 51, no. 1 p. 232-64, 4 illus., sketch map, table) 29 refs.

During the Arctic Institute of North America's expedition in summer of 1950 to Baffin Island ("the last terra incognita of lichenology in the Arctic"), a careful study of lichen flora was made in the Clyde Inlet region and during brief visits to Arctic Bay, Pond Inlet, Clyde, Barnes Ice Cap (Camp A2), Cape Searle and Frobisher Bay. The geology of the areas visited and world distribution of

the lichens found are briefly surveyed. An annotated list of the 257 species now known from Baffin Island is given. Nineteen of these are new to North America and 44 species and two varieties are new to the Canadian Eastern Arctic. Additions and corrections to the list are appended. **Copy seen:** DGS; MH-A.

35119. HALICKI, BRONISLAW. Rola lodu gruntowego w kształtowaniu plejstoceńskich form peryglacialnych. (Acta geologica Polonica, Oct.-Dec. 1951. v. 2, no. 4, p. 616-198. 6 refs. Text in Polish. English translation in conspectus p. 209-210. **Title tr.:** The role of ground ice in shaping Pleistocene periglacial forms.

Contains note on thermic karst landscape characterized by lake depressions in places where large ground ice lenses have melted. Thermic karst is a main feature of the present periglacial zone in Asia and North America. Relation of this phenomenon to certain Pleistocene features in Europe is discussed.

Copy seen: DGS.

35120. HALL, CARLOTTA C. Observations on western *Botrychiums*. (American fern journal, Oct.-Dec. 1943. v. 33, no. 4, p. 119-30, plate 2)

Contains synonymy and critical notes on *Botrychium pinnatum*, a grape fern or moonwort, ranging from Kamchatka (W. T. Eyerdam in 1928), Alaska, and British Columbia to Colorado, p. 128-30.

Copy seen: DLC; MH-G.

35121. HALL, DAVID G., 1903- . The blowflies of North America. Baltimore, Md., Thomas Say Foundation, [Jan.] 1948. [6], 477 p. incl. illus., 46 plates (5 col.). (Thomas Say Foundation, v. 4) 303 refs.

Contains in the introduction (p. 1-40) history of the classification of the Calliphoridae; their economic importance as transmitters of various diseases, including myiasis in man and livestock; control; methods of collecting and preservation of specimens; variation, synonymy and classification. A key to major taxonomic units of muscoid flies (p. 31-33) is followed (p. 45-361) by: data on morphology, metamorphosis and ecology of the fam. Calliphoridae, keys to the genera, species and larvae, and descriptions of all known North American forms (male and female), including many new species and combinations. At least 13 native to Alaska,

northern Canada and Baffin Island, are included (p. 170, 200, 213, 275, 277-80, 299, 303, 307, 326, 337, 339). An extensive bibliography and index of valid names and synonyms are appended.

35123. HALL, EUGENE RAYMOND, 1902- , and J. W. BEE. Occurrence of the harbor porpoise at Point Barrow, Alaska. (Journal of mammalogy, Feb. 1954. v. 35, no. 1, p. 122-23) Contrib. No. 1953-1 from Arctic Research Laboratory under contract Nonr-38700 between Office of the U. S. Naval Research and University of Kansas.

Contains notes on two harbor porpoises *Phocoena vomerina* (Gill), one a very young specimen, killed in this area. Though these are the first such records for the northern Alaskan waters, the animals according to local Eskimos are not rare there, and are called in their language *Ah-vi-sauk*. Both specimens are preserved at the U. S. National Museum.

35130. HALLE, THORE GUSTAF, 1884- . The Carboniferous flora of East Greenland. (In: International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 594-95)

Fossil flora from Upper Carboniferous and possibly Lower Permian beds on Clavering and Traill Islands, Gauss Peninsula, and north Scoresby Land, were collected by the Danish expeditions to East Greenland between 1931 and 1938 (led by L. Koch). Hitherto a gap has extended from the top of the Lower Carboniferous to the base of the Upper Triassic. "These Permo-Carboniferous plants represent the only reliable information that we have on the flora and vegetation of the Arctic regions during a period elsewhere marked by great paleogeographical changes." Discussion by W. Gothan (in German) and J. Walton (in English).

HALLER, ALBRECHT VON, 1708-1777, see Gmelin, J. G. Reliquias . . . 1861. No. 34920.

35131. HALLER, JOHN, 1927- . Geologie und Petrographie von West-Andr es Land und Ost-Fraenkels Land, NE-Gr nland. K benhavn, C. A. Reitzel, 1953. 196 p. illus. 12 maps (6 fold.), diagrs., cross sections, tables. (Meddelelser om Gr nland. Bd. 113, nr. 5) 34 refs. Text in German. Summary in English, p. 190-93. *Title tr.*: Geology and petrography of West Andr es Land and East Fraenkels Land, northeast Greenland.

Contains a detailed study of the innermost part of Kejser Franz Josephs Fjord region. Field work was done by the writer (during the Danish East Greenland Expedition) Aug. 1949-Aug. 1950 in western Andr es Land (73 30' N. 26  W.) and July-Aug. 1951 in central and eastern Fraenkels Land (73 20' N. 27 -28 30' W.). The region consists of a crystalline complex (granite, gneiss, schist, quartzite, marble) bordered on the east by the Upper Algonkian Eleonore Bay Formation and Petermann Series. The study shows that rocks of sedimentary origin in the crystalline complex are of Upper Algonkian age, metamorphosed and metasomatically altered in the Caledonian orogeny. Petrography of the metamorphic and igneous rocks of the complex is discussed in great detail and chemical analyses are given. Structure of the region is described. *Copy seen:* DGS.

35132. HALLOWELL, ALFRED IRVING, 1892- . The role of conjuring in Salteaux society. Philadelphia, University of Pennsylvania Press, 1942. xiv, 96 p. 1 illus., 2 plates on 11. (Philadelphia Anthropological Society. Publications, v. 2)

The practice of conjuring is found among the Indians "in the Great Lake region, west from there to the Rocky Mts. and north to the arctic region. The conjurer, upon being asked to perform, enters a specially built lodge and shakes it ritually; the witnesses then address their inquiries to him. The questions concern the welfare of distant people, causes of sickness or other perplexing events, and the proper course of action in the face of a dilemma. The

answers are given directly by the conjurer. The conjurers, on being questioned, gave no evidence of conscious duplicity, and the author believes that they are living out the expectations of a culturally prescribed role."—Psychological abstracts, 1944. v. 18, p. 23.

Annotated bibliography is appended, p. 89-96. This study is "based on intimate knowledge of . . . the Salteaux of the Berens River in Manitoba."—Preface.

35136. HAMILTON, A. C. Shoran sites. (Canadian surveyor, July 1954. v. 12, no. 4, p. 254-58, text map, diagr.)

Preparatory work on shoran sites in northern Canada is usually done a year ahead of the actual measurement program. Ninety sites have been selected, spaced to provide control for Quebec, Labrador, northern Ontario, Manitoba, northern Saskatchewan, northern Alberta, Yukon Territory, Mackenzie and Keewatin Districts, Southampton Island, and southern half of Baffin Island. This will extend control north from existing triangulation to the base of the Arctic Archipelago. Requirements for selecting shoran sites in general and seaplane sites in particular, and the preparation then necessary for shoran installation on the sites are discussed. To be used for map control, the points positioned on the ground must be identified and pinpointed on tri-met or vertical photographs. Procedures are briefly described.

35141. HAMILTON, RODGERS D. The range of the northern cliff swallow in Alaska. (Auk, July 1948. v. 65, no. 3, p. 460-61)

Contains a summary of the literature data on distribution of this bird in Alaska, and the author's observations on its nesting above Port Clarence, near Teller, in the summer of 1946.

Copy seen: DSI; MH-Z.

35142. HAMMER, MARIE SIGNE (JØRGENSEN), 1907- Collemboles and oribatids from the Thule District, North West Greenland and Ellesmere Island, Canada; collected by J. C.

Troelsen and Chr. Vibe. København, C. A. Reitzel, 1953. 16 p. 15 illus. (Meddelelser om Grønland. Bd. 136, nr. 5) 16 refs.

Specimens were obtained from soil samples collected by J. C. Troelsen at Slidre Fjord (80°09' N. 86°15' W.) on the west side of Ellesmere Island during summer 1952, and by Chr. Vibe on Bache Peninsula (79°07' N. 75°20' W.), Ellesmere Island, in 1940 and in Inglefield Land (78°30'–79° N. 64°30'–69° W.) and the Thule region, northern Greenland, in 1941 and 1951. Nineteen species of Collembola and eight species of Oribatidae (wood mites) are briefly described. Collembola have been mentioned only once before from Ellesmere, and Oribatidae have never been found so far north in Canada or Greenland.

35143. HAMMERICH, LOUIS L., 1892–. Aus nordischen Siedlungen in Grönland. (Kieler Blätter, 1941, Heft 2, p. 84–92, text map) **Title tr.:** From northern settlements in Greenland.

Contains an evaluation of habitability conditions in West Greenland compared with those of Iceland and northern Norway. The adventure of Erik the Red, the location of the Norse settlements (the northernmost called Ataneq, approx. 65° N. 50° W.), economic possibilities (sheep and cattle breeding), exploratory voyages of Norsemen to Vinland and as far north as Upernavik, 74° N. are reviewed; how Greenland was depicted in the Old Norse poetry (Atlamál en groenlenzku), and causes of the extinction of the Norse colonies are discussed. Acculturation of the Eskimos, their old and modern literature are also considered. **Copy seen:** DLC.

35144. HAMMON, WILLIAM McDOWELL, 1904–. La situación actual del problema de la poliomiélitis en el Continente Americano. (Pan American Sanitary bureau. Boletín de la Oficina sanitaria panamericana, Aug. 1950. año 29, no. 8, p. 821–26) Text in Spanish. **Title tr.:** The present situation of the problem of poliomyelitis on the American continent.

The study includes a discussion on polio in the American Arctic, its epidemiological peculiarities, severity, morbidity, etc. **Copy seen:** DGS.

35144A. HAMMOND, JOHN. Photoperiodicity in animals; the role of dark-

ness. (Science, Apr. 10, 1953. v. 117, no. 3041, p. 389–90, table) 10 refs.

Contains comments on a recent paper by C. M. Kirkpatrick and A. C. Leopold, q. v., on the role of darkness in sexual activity of quail. The author suggests that the data contained in this paper could be interpreted as responses to day length; and, secondly, that darkness is not necessarily inhibitory, but in some cases may promote sexual activity in animals. These views are supported by the author's own work and that of others.

Copy seen: DSG.

35145. HAMPTON, BENJAMIN B. Shall Alaska become a "Morganheim" barony? (Hampton's magazine, May 1910. v. 24, p. 631–46, illus.)

Describes Alaska's wealth and the dependence of its development on transportation facilities. Discusses the Morgan-Guggenheim Syndicate control in the Bering River and Matanuska coalfields; the Copper resources of the Copper River region, and of the Copper River and Northwestern Railway, and Alaska Central Railway. Author argues for U. S. Government construction and operation of the railroads in Alaska and the leasing of the mineral lands on a fair royalty basis, to prevent further expansion of the Morgan-Guggenheim control over the railroads and mineral resources and ultimate domination over Alaska.

Copy seen: DLC.

35146. HAMPTON, BENJAMIN B. The vast riches of Alaska; will the Morgan-Guggenheim combination acquire them, or will they benefit the whole people? (Hampton magazine, Apr. 1910. v. 24, p. 451–68, illus.)

Presents estimates of wealth of Alaska. Discusses fight in Washington, D. C., for the reorganization of the government of Alaska and control of the development of Alaska resources. Author argues for public control of resources against private exploitation, and that the United States Government should build, equip, and operate the railroads; mines should be operated on a royalty basis for the benefit of the whole people. **Copy seen:** DLC.

35154. HANNA, WILSON CREAL, 1883-. *Cuculus canorus* on the North American continent. (Condor, Jan.-Feb. 1947. v. 49, no. 1, p. 42)

Contains notes on a species of cuckoo collected by an Eskimo near Cape Prince of Wales, Alaska. The specimen was identified by Dr. H. Friedmann. "The bird is a Siberian cuckoo, *Cuculus canorus*. It is a young bird and is not completely identifiable to subspecies but is probably of the race *telephonus*." This is the first record of *C. canorus* on the North American continent.

Copy seen: DSI; MH-Z.

35155. HANNA, WILSON CREAL, 1883-. Siberian peregrine falcon in North America. (Condor, May-June 1940. v. 42, no. 3, p. 166-67, illus.)

Contains an identification of the skin of an adult male hawk, obtained by a native on May 25, 1939, near Cape of Prince Wales, Seward Peninsula, Alaska. It was determined by L. R. Wolfe and H. Friedmann as *Falco peregrinus calidus*, a new form for the fauna of North America. The author has also a set of three eggs, collected on Cape Mountain and apparently belonging to Siberian peregrine falcon.

35156. HANSEN, D. B. Arterial blood pressure in unanesthetized hypothermic rats. (Journal of applied physiology, Apr. 1954. v. 6, no. 10, p. 645-49, 2 fig., 2 tables) 13 refs.

Mean arterial blood pressure in cold-anesthetized rats did not fall below 90 mm. Hg. despite reduction of colonic temperature to near lethal level. By contrast, pentobarbital anesthesia greatly limited the temperature range for safe cooling, the lethal effects of hypothermia and pentobarbital being apparently additive. Relations between blood pressure and pulse rate, etc., were also studied.

35157. HANSEN, PAUL MARINUS, 1901- . The stock of cod in Greenland waters during the years 1924-52. (International Council for the Study of the Sea. Rapports et procès-verbaux, 1953, pub. 1954, v. 136, p. 65-71, 6 graphs) 8 refs.

Contains study based on continuous investigations by the Greenland Administration. During 1919-1931 cod moved north to 73°-74° N.; commercial fishing now takes place to 71° N. Occurrence of eggs and larvae in West Greenland offshore banks and in coastal waters and fjords, the year-class composition 1924-1952, changes in growth rate, age at first maturity, and migration for the 29-year period are discussed in some detail.

35158. HANSON, G. H., and others. Maximum usable frequencies and lowest usable frequencies for the path Washington to Resolute Bay. (Journal of geophysical research, Dec. 1953. v. 58, no. 4, p. 487-91, 5 graphs) 3 refs. *Other authors:* H. V. Serson and W. Campbell.

"The standard frequency transmissions of WWV were monitored at Resolute Bay [Canadian Arctic Islands; 74°41' N. 94°55' W.] for one year [Sept. 24, 1951-Sept. 30, 1952]. Using a method

developed by Scott, maximum usable frequencies (MUF's) and lowest usable frequencies (LUF's) have been obtained for the path Washington to Resolute Bay for that period. Comparison with the predictions made by the Central Radio Propagation Laboratory in Washington indicates that the predicted MUF's are too low during the night and, for some months, too high during the day. The LUF's are lower than would be expected if the propagation were all by one reflection from the F2 layer."—*Author's abstract.* Discussion by S. M. Ostrow in this journal Sept. 1954. v. 59, no. 3, p. 434. *Copy seen:* DGS.

Observations were made during field work in 1947 in the muskeg country west and south of James and Hudson Bays, and conclusions also drawn from plant collections and low altitude flights. Muskeg apparently constitutes one of the primary habitats of this grouse (*Pediocetes phasianellus*) which has been reported from all major sectors of the Hudson Bay lowlands. Types of muskeg are described. Habits of this race of grouse are compared with those of the race *campestris* in Wisconsin. Emigration from the Hudson Bay-James Bay region in 1932 is discussed.

(In: National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Canadian papers presented at the Third International Conference on Soil Mechanics and Foundation Engineering, held in Zurich, Switzerland, Aug. 1953. Ottawa, July 1954. Technical memorandum, no. 30, p. 103-106, 3 illus., 4 graphs) 2 refs. Reprinted from: International Conference on Soil Mechanics and Foundation Engineering. Third, Switzerland, 1953. Proceedings, v. 2, session 6, p. 103-106. Text in English. Summary in French.

"Results are presented of laboratory and field tests with a sulphite solution marketed in liquid and powder form under the trade name *Lignosol*. This product reduces soil permeability and has almost eliminated ice segregation in test situations favorable for frost action. Heaving of treated samples in the laboratory was less than 10 percent of the untreated samples. A pressure-grouting technique for injecting the solution into the soil is described. A treatment may last for at least three yr. under average soil and moisture conditions. The higher viscosity of the *Lignosol* solution in the soil in comparison with the normal soil moisture is suggested as the major reason for the reduction in ice segregation."—SIPRE. **Copy seen:** DGS.

35173. HARRINGTON, GEORGE LEAVITT, 1883- . The gold and platinum placers of the Kiwalik-Koyuk region. (*In:* U. S. Geological Survey. *Mineral resources of Alaska in 1917.* Bulletin, 1919, no. 692, p. 369-400, fold. map)

Presents the results of earlier geologic work in the general region of the Kiwalik and Koyuk basins between Kotzebue Sound and Norton Bay in eastern Seward Peninsula, supplemented by data obtained by the author in 1917. Describes the geology and mineral resources, gives history of mining developments, and discusses the economic conditions affecting mining operations; describes the gold-bearing placers of the region. The occurrence of platinum is noted in some of the placer deposits. Coal deposits, a lead-silver lode, and hot springs also occur in this region. *Copy seen:* DLC.

35174. HARRINGTON, GEORGE LEAVITT, 1883- . The gold and platinum placers of the Tolstoi district. (*In:* U. S. Geological Survey. *Mineral resources of Alaska in 1917.* Bulletin, 1919, no. 692, p. 339-51, fold. map)

Presents the results of author's field investigation in 1917 of the Tolstoi district (approx. 63°20' N. 157° W.) in west-central Alaska. Describes the topography, climate, vegetation, animal life, economic factors affecting mining, and (in more detail) the geology. Summarizes the history of mining development and describes the gold-bearing placers of the district. The occurrence of gold, platinum, cinnabar (mercury sulfide), and cassiterite (tin oxide) is reported. *Copy seen:* DLC.

35175. HARRINGTON, GEORGE LEAVITT, 1883- . Gold placers of the Anvik-Andreafski region. (*In:* U. S. Geological Survey. *Mineral resources of Alaska in 1916.* Bulletin, 1918, no. 662, p. 333-49, fold. map)

Gives the results of a field investigation in 1916, by the author, of the territory north and west of the lower Yukon River between the Anvik and Andreafski Rivers (61°30'-63°40' N. 159°40'-163°20' W.) in western Alaska. Describes the relief, uplands, lowlands, drainage, climate, vegetation and animal life, and the geology. The mineral resources described include gold placers, gold lodes, coal deposits, mineral springs, and antimony deposits. The mineralization of the region is discussed and suggestions to prospectors made; the history of mining

development is given and economic factors affecting mining considered. Author's bulletin on this region is *Arctic Bibliography*, No. 6679.

35181. HARRISON, JAMES MERRITT, 1915- . Iron formations of Ungava Peninsula, Canada. (*In:* International Geological Congress. 19th, Algiers, 1952, pub. 1953. Comptes rendus, Sect. 10, fasc. 10, p. 19-33, text map, 2 cross-sections, table) 32 refs.

The Labrador trough, a belt of tightly folded rocks of Proterozoic age resting unconformably on Archean gneiss, extends for about 600 miles in a northerly direction across western Labrador and northern Quebec. Its maximum width is about 60 miles. The western part of this belt contains iron formations of the Lake Superior type. Formations of the Knob Lake group in the Knob Lake-Burnt Creek region on the Quebec-Labrador boundary are described in turn. The stratigraphic sequence includes slates, quartzites, elastic dolomites, chert breccia and, locally, basic volcanic rocks. The two iron formations within this group, the Ruth and Sokoman, are described in some detail. It is concluded that they were deposited in a shallow basin under stable conditions. Source of the iron is unknown.

Adrenalectomized cats, maintained on adrenal extract adequate for laboratory life, showed, when chilled, a much quicker fall in rectal temperature than controls. Arterial pressure, erythrocyte volume, plasma sodium and chloride, and blood sugar are also discussed. After chilling the cerebral activity of experimental animals returned only slowly to normal and then sometimes failed; such animals also sometimes failed to survive a second cooling. **Copy seen:** DLC.

35188. *HARVA, UNO NILS OSKAR, 1882-1949. Die religiösen Vorstellungen der altaischen Völker. Helsinki, Suomalainen tiedeakatemia, 1938. 634 p. 109 illus., text map. (Folklore Fellows. FF Communications, no. 125) about 250

*Name Holmberg was used in his earlier works.

refs. Text in German. **Title tr.:** The religious conceptions of the Altaic peoples.

A revised German edition, translated by Erich Kunze, of a study pub. in Finnish in 1933.

A monograph on the religions of the Turcic, Tataric, Mongolic, and Manchutungusian peoples, living in the regions of the Altay and Sayan Mts. The work is divided into chapters according to the objects and forms of worship, e. g. the earth and its origin, creation of man, god of heaven, the masters of nature, hunting rites, the shaman and his attributes, etc. Numerous references are made to the beliefs and customs of Dolgans, Gilyaks, Soyots, Tungus, Yakuts, Yeniseians, Voguls, and Paleo-Siberians.

35189. HARVEY, BEN, Jr. Land transportation in the Arctic. Ft. Belvoir, Va. Apr. 1949. 44 p. illus., map, graph, table. (U. S. Army. Engineer School. Unpublished research paper) 19 refs.

"Arctic transportation is reviewed with reference to the capabilities and limitations of wheeled and track-laying vehicles, trailers, various types of sleds, and tractor trains. Wheeled vehicles are unsuitable for cross-country operation; but track-laying vehicles are satisfactory, and large quantities of supplies and equipment can be successfully moved overland by means of tractor trains . . . [features required in a vehicle for arctic use are stated] . . . Such a vehicle could be used as a mobile shop, radar carrier, gun mount or weather station. Data on load capacities of lake, river and sea ice are also included."—SIPRE.

Copy seen: DP.

35190. HARVEY, HUGH. Charter flying in the Canadian Northwest. (Shell aviation news, Dec. 1954. no. 198, p. 4-6, illus., map)

Contains discussion of the importance of pioneer and regional air carriers and the role of charter flying in the economic and military developments in northern Canada. One such, Associated Airways Ltd. of Edmonton, established 1945 by P. P. Fox, has bases at Peace River (Alberta), and at Yellowknife, Fort Smith, and Hay River (Mackenzie District). It has now a fleet of twenty planes, including de Havilland Beavers, which are superseding four-place and the earlier two-place aircraft. Through Associated Helicopters Ltd., this airline

operates a fleet of five Bell 47-D1 helicopters; they are used in Mackenzie River country surveys (for oil companies, etc.) and by the Canadian Wildlife Service. The airline has applied for a license to operate a regularly scheduled freight service from Edmonton to Uranium City, Fort Smith, Hay River, Resolution and Yellowknife using Bristol Freighters. Freight rates would be reduced considerably from those of charter service.

35192. HASBROUCK, EDWIN M. The status of Barrow's golden-eye in the eastern United States. (Auk, Oct. 1944. v. 61, no. 4, p. 544-54, text map)

Contains a study of the frequency of the duck, *Glaucionetta islandica*, in the eastern United States, based on over 2000 records from the Canadian provinces, Greenland and Iceland, as well as the United States itself. Two specimens were collected in Greenland and twenty in Labrador. **Copy seen:** DSI; MH-Z.

35193. HASSELBORG, ALLEN E. Bird notes from Admiralty Island, southeastern Alaska. (Condor, Sept. 1918. v. 20, no. 5, p. 191)

Contains a discussion of the effects of a hard winter on some species of birds, especially on horned owls which moved to the coast because almost all rabbits had died in the interior.

Copy seen: DSI; MH-Z.

35194. HASSERT, KURT, 1868- Die Völkerwanderung der Eskimos. (Geographische Zeitschrift, 1895. Bd. 1,

Heft 5-6, p. 302-322) about 50 refs. Text in German. *Title tr.*: Migration of the Eskimos.

Contains a critical review of numerous theories on the origin and wanderings of Eskimos. A great movement of peoples in northeastern Asia once originated from the Altay Mts. and the region around Lake Baykal. The former Eskimo settlements in Asia and Asiatic Eskimo relations with the neighboring peoples, especially coastal Chukchis, are discussed. The Eskimo route to America was via Bering Strait and Alaska, and not by way of Kamchatka and the Aleutian Islands, it is stated. Eskimo migrations on the American continent (in Alaska, Canada and Greenland) are traced; their struggles with Norsemen in Greenland are outlined; forced south by change of climate they met the Norse and defeated or assimilated them around 1448 A. D. Eskimo migrations back to Asia were due to trade relations, hostility of the Indians and search for food.

35198. HATTER, JAMES, 1921-. The status of moose in North America. (North American Wildlife Conference. 14th, Washington, D. C., Mar. 7-9, 1949. Transactions, p. 492-501) 5 refs.

Some general aspects regarding the status of this species, *Alces americana*, are discussed, including its condition in Alaska. There in contrast to other areas, it is considered as holding its own; range extension and population shifts are characteristic over much of the territory.

Copy seen: DLC.

35199. HATTERSLEY-SMITH, GEOFFREY F. Cruise of the *Cancolim II* in Beaufort Sea and Amundsen Gulf, 1951. (Polar record, Jan. 1954. v. 7, no. 47, p. 41-42)

Contains short account of the first northern cruise of the *Cancolim II*, research vessel of the Defence Research Board of Canada. The party of nine was

led by T. H. Manning. During the period July 28–Sept. 19, 1951, 43 oceanographic stations were occupied, lines of soundings made at every opportunity and four astronomical control positions established. Fish, plankton, birds, and mammals were collected.

35201. HATTERSLEY-SMITH, GEOFFREY F. Ellesmere Island Expedition 1953; preliminary report. Ottawa, Defence Research Board, 1953. 10, 2 p. Typescript. 3 refs.

Contains brief description of work carried out on Ellesmere Ice Shelf and northern coast by a four-man party (the writer and R. G. Blackadar of the Defence Research Board of Canada, with two Greenlanders) in spring and summer 1953. A revised map of much of the region was prepared, and ice formations and extent of the ice shelf plotted. Observations made on the ice shelf are listed and compared with ice island T-3. Glaciological and meteorological observations, traveling conditions, and relics of former expeditions are noted; mammals seen are listed; as is the party's equipment. Appendix contains full abstract of a report on "A geological reconnaissance of northeastern Ellesmere Island," by R. G. Blackadar. Aerial photographs, two maps and six diagrams accompanying original report are not included in the typescript copy.

Text in French. *Other authors:* J. Cheymol, and A. Quinquaud. **Title tr.:** Prevention and inversion of toxic apnea during hypothermia.

Contains a note on the effects on toxic apnea in hypothermic dogs, of adrenaline, methylene blue and yohimbine.

Copy seen: DSG.

35206. HEAP, J. A. Edinburgh University Lyngen Expedition 1953. (Geographical journal, Dec. 1954. v. 120, pt. 4, p. 536-38, text map)

This ten-man expedition to northern Norway, July-Aug. 1953, had one group carrying out biological work in Res'adal about 40 miles southeast of Tromsø: a botanical collection and a survey of bird life (72 breeding species found) were made, small mammals, fruit flies, external parasites of trout and char, also fleas from voles and beetles were collected. A second group carried out glaciological work on the Lyngstäl Glacier (approx. 70° N. 20°30' E., some 40 miles from Res'adal), a secondary glacier fed by the Jekkevarre Icecap. Landforms were studied in the valley, recordings of cosmic radiation obtained, and a survey was made of a species of soil fauna resistant to arctic conditions.

35208. HECKSCHER, KAY. La valorisation du Nordland. (Revue de l'Université Laval, June 1953. v. 7, no. 10,

p. 852-63) Text in French. **Title tr.:** The stabilization of Nordland.

Contains a survey of the plan for economic recovery following World War II in northern Norway (Nordland, Troms, and Finnmark provinces). Economic problems are noted. Projects in agriculture, forestry, fisheries, mines, industries, commerce, and tourist industry are discussed. The ten-year plan will be financed by both public and private funds; a preliminary estimate of cost is about 70 million dollars. Means of financing are discussed.

Copy seen: DLC.

35209. HEGNAUER, ALBERT HENRY, 1900-, and others. Cardiac physiology in dog during rewarming from deep hypothermia. (American journal of physiology, Oct. 1951. v. 167, no. 1, p. 69-75, 6 fig.) 12 refs. *Other authors:* J. Flynn and H. D'Amato.

Dogs made hypothermic to a mean heart temperature of 16.2° C. were placed in a 45° bath and studied during rewarming. The return to normal of the pulse rate, blood pressure, P-R, Q-T, etc. with increasing heart temperature, followed a course which almost exactly mirrored that during cooling. Conditions in the dog are compared and contrasted with those in man.

Copy seen: DSG.

35210. HEGNAUER, ALBERT HENRY, 1900-, and K. E. PENROD. Observations on the pathologic physiology in the hypothermic dog. U. S. Air Force Air Materiel Command. Wright-Patterson Air Force Base, Dayton, Ohio. Technical Report no. 5912. Feb. 1950. 108 p. illus. tables. Process print. 11 refs.

Contains a study of 450 dogs immersed in 1 cc. water with the aim of establishing the cause(s) of hypothermic death. The temperature at which death ensued varied greatly. The main cause of death was progressive cardiac ischemia. No evidence of hypoxia was obtained.

Copy seen: DSG.

35211. HEGNAUER, ALBERT HENRY, 1900-, and others. Influence of intraventricular catheters on course of immersion hypothermia in dog. (American journal of physiology, Oct. 1951. v. 167, no. 1, p. 63-68, fig., 3 tables) 12 refs. *Other authors:* H. D'Amato and J. Flynn.

Intraventricular catheterization was found to be detrimental to hypothermic dogs, as it initiates idioventricular ectopic

beats which in turn cause ventricular fibrillation at temperatures above those in uncatheterized animals. The possible mechanism of this sensitization is discussed. **Copy seen:** DSG.

35212. HEIDELMANN, GERHARD. Die Bedeutung der individuellen Kälteempfindlichkeit für die Krankheitsbereitschaft. (Zeitschrift für die gesamte innere Medizin und ihre Grenzgebiete, Nov. 15, 1953. Jahrgang 8, Nr. 22, p. 1016-1023, 3 fig.) 42 refs. Text in German. **Title tr.:** The significance of individual cold sensitivity for susceptibility to disease.

Contains a review of the current knowledge on the relation between the circulation in the skin (especially of the aera) and the susceptibility to disease of the inner organs. It is concluded that the so-called functional circulation-disturbances are often symptoms of impaired metabolism, endocrines, or nervous system. The significance of cold sensitivity and acral circulation in diagnosing those diseases is discussed.

chology, 1939. v. 20, p. 431-47, illus., tables) 21 refs.

Contains an account of experiments on temperature sensation with two trained subjects. The Alrutz theory which claims that "hot" sensation depends upon simultaneous stimulation of both cold and warmth spots is shown to be untenable.

Copy seen: DSG.

35215. HEITMANN (H.) AND SON, Oslo. Evaluating the helicopter for use in Norway. (Aeroplane, Aug. 27, 1954. v. 87, no. 2249, p. 271-72, illus.)

Contains description of flight tests made on a Bell 47-D1 helicopter under typical Norwegian winter conditions to obtain practical experience. Flying was divided into two periods: from Fornebu airport near Oslo, Oct. 2-Dec. 31, 1952, and from Lillehammer, Jan. 1-Apr. 15, 1953. Tests were made over mountainous terrain, in low temperature conditions (to -30° C.) and on snow-covered landing sites. Results indicate the need for an engine with reserve power, de-icing equipment for rotor blades, a cabin heating system, and a defroster equipped with windshield. The services of a navigator for passenger-carrying helicopters is suggested. "A great future" is anticipated for the helicopter in Norway and in countries of similar nature (i. e. many regions of the Arctic).

35218. HEMINGWAY, ALLAN, 1902-, and L. A. FRENCH. Effect of denervation of thermal cutaneous receptors on rectal temperature response to limb immersion. (*American journal of physiology*, Aug. 1953. v. 174, p. 264-68, illus.) 8 refs.

Contains an account of experiments with dogs designed to determine the role of cutaneous warmth receptors in the control of body temperature. The response of rectal temperature to hind limb immersion, was markedly changed by bilateral rhizotomy and the thermal cutaneous vasomotor response was considerably retarded. **Copy seen:** DSG.

35219. HEMINGWAY, ALLAN, 1902-. Rate of recovery of temperature regulating responses after ether anesthesia. (*American journal of physiology*, 1948. v. 152, p. 663-70, illus., tables) 12 refs.

Contains an account of experiments with dogs exposed to cold for determining thermoregulatory responses. Neither shivering, nor peripheral vasoconstriction were abolished during ether anesthesia, but temperature regulation was impaired and normal rectal temperature could not be maintained. Temperature regulation returned to normal two-three hours after anesthesia. **Copy seen:** DLC.

35220. HENDERSON, JAMES FENWICK, 1905-. Current research in the geological sciences in Canada 1950/51 [1953/54]. Ottawa, Geological Survey of Canada, 1951-1954, *in progress*. 4 no. mimeographed. The first three

numbers (54, 54, 61 p.) were issued separately; the fourth was issued in: Canada, National Advisory Committee on Research in the Geological Sciences, Fourth annual report, 1953-54, Dec. 1954. p. 63-117

Annual bibliography undertaken at the request of the Canadian National Advisory Committee on Research in the Geological Sciences. Each number contains 500-550 references (some briefly annotated) to investigations being carried on by geologists in Canadian Government agencies, industry, universities, private institutions and associations, etc., also by certain graduate students. Projects are grouped under the main branches of geology and mineralogy and listed by provinces. Northern material is included under Manitoba, Newfoundland-Labrador, Northwest Territories, Ontario, Quebec, and Yukon. Author index is added. **Copy seen:** DGS.

35221. HENDERSON, JAMES FENWICK, 1905-, and I. C. BROWN. Structure of the Yellowknife greenstone belt, Northwest Territories. (*Canadian mining and metallurgical bulletin*, Nov. 1950. no. 463, p. 613-20, illus., text map) Also *pub. in:* Canadian Institute of Mining and Metallurgy. Transactions, 1950. v. 53, p. 415-22.

Contains "interpretation of the structure along the west side of Yellowknife Bay [Great Slave Lake, Mackenzie District]. Key lava beds have been traced across the West Bay fault and east of the Giant Campbell shear-zone system, suggesting that the shear zones are related to a large, early fault. The probable extension of this fault has been mapped."—U. S. Geological Survey. *Annotated bibliography of North American geology*, 1950, pub. as its Bulletin 985, 1952, p. 124. **Copy seen:** DGS.

35222. HENNIG, RICHARD, 1874-. Rassistische Überreste mittelalterlicher Normannen bei Eingeborenen Nordamerikas. (*Zeitschrift für Rassenkunde*, 1937. Jahrg. 6, Heft 1, p. 20-28, plate) Text in German. **Title tr.:** Racial relicts of medieval Norsemen among natives of North America.

Contains discussion as to the origin of "white Indians" or Mandans, and legendary Tunnits. The "blond Eskimos" found on Baffin Island, in northern Labrador, also on Victoria Island in 1911 by V. Stefansson, the author con-

cludes, were probably crossbreeds between American natives and Norsemen who left Godthaab in 1342 on a voyage to America.

Copy seen: DLC.

35223. HENNING, GEORG. Die Reiseberichte über Sibirien von Herberstein bis Ides. (Gesellschaft für Erdkunde zu Leipzig. Mitteilungen, 1905, pub. 1906. p. 241-394) about 100 refs. Text in German. **Title tr.:** Travel accounts on Siberia from Herberstein to Ides.

Contains an analysis of news on Siberia and its population before Yermak and at the time of his conquests, on discoveries made in the Far East by Russians, Englishmen and Dutchmen. It was mostly diplomats and envoys from western Europe to Moscow who wrote and published such accounts of travels, e. g. Sigmund von Herberstein (1486-1566), Isaak Massa, Johann Arnold von Brand (1647-1690), Nikolai Witsen (1641-1717), Eberhard Isbrand Ides (b. 1657), and Adam Brand. Narratives of Cossacks, notes and letters of English and Dutch merchants, reports of Jesuit fathers are also considered. Henning gives a critical evaluation of all this old literature. A special chapter (p. 341-72) deals with the ethnographic data on the Siberian natives, supplied by Witsen, Ides and A. Brand; supplementary information and emendations based on works of later explorers (Gmelin, Schrenck, Hiekisch, and others) are provided in footnotes. Thus an ethnographic sketch (demography, material culture, customs and beliefs) of the following Siberian natives is given: the Voguls and Ostyaks, Tungus, Yakuts, Gilyaks, Yukaghirs, Chukchis, Koryaks, Kamchadals, and others. A final chapter (p. 373-94) reviews the first attempts to draw maps of Siberia in the period 1537-1704.

Contains a list of 22 fungi from various regions, with 12 described as new. *Puccinia saxifragae* on the leaves of *Saxifraga lyellii* and *Chrysomyxa pirolae* on *Pirola secunda* native to Alaska (Lynn Canal) are included. The first part (1893) of this work has no Arctic material.

Copy seen: MH-BL.

35225. HENSCHEN, FOLKE, 1881- Problems of geographic pathology in Sweden. (Research and progress, Mar.-Apr. 1942. v. 8, no. 2, p. 73-79) 12 refs.

The nature and limitations of the problem and of earlier studies are outlined. The distribution of some diseases is discussed. Bothryocephalic anemia is more common in the northern than other areas, arteriosclerosis (Norrländ coast) rare. Tularemia is confined to southern Norrländ. TB, having reached an enormous increase in the North, shows retrogression in the past 25 years.

35227. HENSEL, HERBERT. Afferente Impulse aus den Kälterezeptoren der äusseren Haut. (Pflügers Archiv für die gesamte Physiologie, 1952. Bd. 256, Heft 3, p. 195-211, 11 fig.) 37 refs. Text in German. **Title tr.:** Afferent impulses from the cold receptors of the external skin.

Impulses were studied in cold receptors of the *N. infraorbitalis* of cats and dogs following the application of heat and cold; in addition pressure effects were also studied. A fundamental similarity with the behavior of cold receptors in the tongue was established.

Copy seen: DSG.

35228. HENSEL, HERBERT, and others. Electrophysiological measurements of depth of thermoreceptors. (Journal of neurophysiology, 1951. v. 14, p. 423-29) Other authors: L. Ström, and Y. Zotterman.

Contains description of a method "based on the recording of the spike potentials of the specific cold fibers in the lingual nerve set up by applying rapid cold jumps to the tongue and by the simultaneous recording of the temperature changes." The depth of thermoreceptors calculated from data of this

method is in good agreement with histological findings. **Copy seen:** DLC.

35229. HENSEL, HERBERT. The time factor in thermoreceptor excitation. (*Acta physiologica scandinavica*, 1953. v. 29, no. 1, p. 109-116, illus.) 4 refs.

Contains report of an investigation, by objective methods, of the time factor in thermoreceptor excitation of single cold fibers of lingual nerves of the cat.

Copy seen: DSG.

35230. HENSEL, HERBERT. Das Verhalten der Thermoreceptoren bei Ischämie. (*Pflügers Archiv für die gesamte Physiologie*, 1953. Bd. 257, Heft 5, p. 371-83, 7 fig.) 18 refs. Text in German. **Title tr.:** Behavior of thermoreceptors during ischemia.

Contains account of investigations designed to elucidate Ebbecke's experiment (1917). The peculiar behavior of thermoreceptors during and following partial asphyxia was found to be due to ischemia and ultimately due to chemical factors.

Copy seen: DSG.

35231. HENSEL, HERBERT. Das Verhalten der Thermoreceptoren bei Temperatursprünge. (*Pflügers Archiv für die gesamte Physiologie*, 1953. Bd. 256, Heft 6, p. 470-87, 10 fig., 2 tables) 20 refs. Text in German. **Title tr.:** The behavior of thermoreceptors during jumps in temperature.

A study is made of the cold receptors in the tongue of the cat during quick and slow changes in temperature. A discussion of the findings and their relation to Hahn's theory of temperature sense is also presented.

35239. HEPPNER, JAMES P. Time sequences and spatial relations in auroral activity during magnetic bays at College, Alaska. (Journal of geophysical research, Sept. 1954. v. 59, no. 3, p. 329-38, 4 graphs) 11 refs. Also pub. as: California Institute of Technology. Division of Geological Sciences. Contribution, no. 662.

"At College (Fairbanks), Alaska [64° 51' N. 147° 50' W.], simple magnetic disturbances of negative bay type are closely related to a sequence of change in the type of auroral activity. General features of the relationship indicate that auroral forms are not independent of the electromotive force responsible for the intense auroral-zone currents. Following the major $-\Delta H$ disturbance, a short interval of $+\Delta H$ disturbance is observed; this cannot be explained by the existing idealized current-systems for the auroral zone."—*Author's abstract.*

35241. HERMANN, FREDE, and H. THOMSEN. Drift-bottle experiments in the northern North Atlantic. København, C. A. Reitzel, 1946. 87 p. 17 maps (4 fold.), 20 graphs, tables. (Denmark. Kommissionen for Danmarks fiskeri- og havundersøgelser. Meddelelser. Ser. Hydrografi. Bind 3, nr. 4) 16 refs. Text in English. Summary in Danish.

Contains compilation and discussion of data from drift-bottles launched in the North Atlantic, Norwegian (Greenland) Sea, Denmark Strait, Labrador Sea, and southernmost Baffin Bay-Davis Strait between 1891-1939. Of some 5610 bottles launched, 1224 were recovered, 70 percent of them on the coasts of Norway, the Faeroes, Shetlands, Orkneys and North Sea, and about 26 percent of the remainder in Iceland. Each launching area is considered in regard to currents indicated by drift and stranding of the bottles. Data 1908-1939, previously unpublished, are appended; number of recoveries from each area, and surface currents are mapped.

35243. HÉROUX, O., and J. S. HART. Adrenal cortical hormone requirement of warm and cold acclimated rats after adrenalectomy. (American journal of physiology, Sept. 1954. v. 178, no. 3, p. 449-52, fig., 2 tables) 12 refs.

Account of experiments which indicate that after adrenalectomy, the minimal amount of adrenal cortical extract necessary for maintaining body weight is not higher in cold- than in warm-acclimated rats; but the rats did not survive at 6° C. without some ACE. Acclimatization to cold, once established, can be partly maintained by low amounts of administered cortical hormones which are apparently not greater than those required for maintaining acclimation to warmth.

Copy seen: DSG.

35244. HÉROUX, O., and J. S. HART. Cold acclimation and adrenal cortical activity as measured by eosinophil levels. (American journal of physiology, Sept. 1954. v. 178, no. 3, p. 453-56, fig., 2 tables) 13 refs.

The trend in eosinophil response to ACTH injections indicates that the higher adrenal activity occurring in the first few days of cold exposure, reaches a maximum in about 20 days and then returns to pre-acclimation level. Hence the adrenals of fully acclimated rats though hypertrophied, are not hyperactive.

Copy seen: DSG.

35245. HÉROUX, O., and J. S. HART. Comparison of four indices of adrenal activity in rats acclimated to 30°, 15°, 1° C. (American journal of physiology, Sept. 1954. v. 178, no. 3, p. 445-48, 2 fig., 4 tables) 15 refs.

Contains report on experiments with two strains of rats, suggesting that "in spite of larger adrenals in the cold acclimated rats, the adrenal cortical activity may not be increased." This interpretation applies more to the Wistar-Sprague Dawley strain, than to the Wistar rats used.

Copy seen: DSG.

35246. HÉROUX, O., and J. S. HART. Restraint hypothermia and its inhibition by cold acclimation. (American journal of physiology, May 1954. v. 177, no. 2, p. 219-21, illus., table) 7 refs.

In narrow cages, 30° C. acclimated rats showed a progressive fall in skin and rectal temperatures. In 6° C. acclimated rats, similar restraint produced a significant decrease in skin temperature only. No correlation was found between body weight and degree of hypothermia in individuals of the same acclimation group.

35247. HERRICK, SAMUEL, 1911- Grid navigation. (Geographical review, Oct. 1944. v. 34, p. 436-56, 9 fig., table)

Suggests the use of a rectangular grid system for navigating a straight line on any conformal or practically conformal chart as readily and accurately as on a Mercator chart, especially in air navigation. A practical comparison between the great circle, the rhumb line, and the grid rhumb line on various projections is provided. Grid variations in practice are discussed, with reference made to the arctic regions for which isogonic lines and isogrivs are shown. Dead reckoning between adjacent charts, preparation of existing charts for grid navigation, radio navigation, a comparison of projections for navigation, and a choice of projection for grid navigation are discussed.

35252. HEUSSER, CALVIN J. Additional pollen profiles from southeastern Alaska. (American journal of science, Feb. 1954. v. 252, no. 2, p. 106-119, text map, graphs, 3 tables) 14 refs.

Contains results of study in summer 1952 (continuing that of 1950, 1951, Arctic Bibliography, No. 22605) of three muskeg sections from the mainland of southeastern Alaska north of Alexander Archipelago: (1) Icy Point; (2) Excursion Inlet; and (3) Chilkat Peninsula. Physical geography and postglacial chronology of the region are briefly described, and the location and character of the muskeg sampled is noted. Sections were obtained with aid of a light airplane. Laboratory treatment of the samples is described and the pollen analyses are shown in tables. The resulting record of vegetation development following the recession of the Wisconsin ice sheet in each of the three localities is discussed.

35253. HEUSSER, CALVIN J. Alpine fir at the Taku Glacier, Alaska, with notes on its postglacial migration to the Territory. (Torrey Botanical Club. Bulletin, Jan.-Feb. 1954. v. 81, no. 1, p. 83-86, text map) 19 refs.

*Alpine fir (*Abies lasiocarpa* (Hook.) Nutt.) was found on the southeast flank of the Juneau Ice Cap, on a ridge bordering Taku Glacier. The tree and its location are described and its occurrence at other stations listed. It apparently survived the ice age in unglaciated refugia in the Yukon and/or Alberta and spread to the coast in the warm dry middle post-glacial period. Migration was impeded during the "little ice age" in late postglacial time. The fir is now found at the heads of inland waterways and valleys where the climate is drier than that of lands immediately bordering the Pacific.*

35254. HEUSSER, CALVIN J., and others. Geobotanical studies on the Taku Glacier anomaly. (Geographical review, Apr. 1954. v. 44, no. 2, p. 22-36, 2 text maps, profiles, table) 14 refs. *Other authors: R. L. Schuster and A. E. Gilkey.*

A study of the upper part of Taku Glacier (main active drainage artery of the Juneau Ice Field, Southeast Alaska) was made by a team from the 1952 field party of the Juneau Ice Field Research Project. Investigations were made to determine reasons for the advance of the glacier terminus during the past 50 years, a period of world-wide glacier recession. Studies of plant succession and differential weathering aided in determining forest and heath trimlines which indicate approximate positions and times of glacier advance. Methods are described and lists of plant species given. Present advance of the glacier terminus appears to be due to an ice wave (or waves), initiated in the source region at 6,000 ft. by a period of increased snowfall and/or less ablation at the edge of the "little ice age," and now moving downglacier. Dissipation of the wave will halt advance of the glacier terminus, as the source region is now being lowered.

35255. HEUSSER, CALVIN J. Palynology of the Taku Glacier snow cover, Alaska, and its significance in the determination of glacier regimen. (American journal of science, May 1954. v.

252, no. 5, p. 291-308, sketch map, graphs) 14 refs.

Pollen and spore stratigraphy of the snow cover (1951-52 autumn, winter, spring, summer increments) on Taku was investigated as part of the Juneau Ice Field Research Project, summer 1952, in an attempt to locate the ablation surface of the previous budget year. Seasonal distribution of various types of pollen and spores over the region was investigated by exposing coated microscope slides to the air. Results are described and meteorological factors affecting pollen transport discussed. Samples in stratigraphic sequence were then obtained from eight pits dug in the glacier between 2,000 and 6,000 ft. elevation. Seventy-five samples were studied and total pollen and spore counts made for each level. Results showed that: (1) seasonal accumulation is variable and depth to 1951 ablation surface increases with altitude; (2) at the lowest elevation studied, only autumn snow remained; progressively up-glacier, winter, spring, and summer snow increments were found; (3) downward percolation of pollen and spores does not generally occur.

35260. HIGGINS, R. G. A radar survey of the ice barrier. (Institute of Navigation, London. Journal, Apr. 1952. v. 5, no. 2, p. 195-97, chart)

Radar-survey trips by the Norwegian sealer *Norsel* along Norsel Bay, Antarctica in 1952 are described. Open water was followed for 150 mi. and the barrier position was fixed approximately every 0.25 mi., soundings taken every five minutes and the barrier height measured at intervals by vertical sextant angle and radar range. An accurate DR was kept throughout the trip. A map of the barrier showing soundings was constructed for a mid-latitude of 5.70°30'. Instruments used were a Kelvin-Hughes 3-cm. marine radar with ranges up to 20 mi., a German echo sounder to depths of 1200 m. and a Sperry gyroscope.

(Paradentium, 1940. Jahrg. 12, p. 69-86, illus. tables, map) *Title tr.:* Report on odontological investigations in Greenland, 6; on parodontal conditions and abrasion in recent East Greenland Eskimos.

Based on observations and material collected by the second author in summer 1937 during the second Danish expedition, organized by the Dental Institute of Copenhagen. Information is presented on the East Greenland Eskimos, their life, food, health, etc., followed by chapters on abrasion; the pulpa, and parodontium. 737 Eskimos of pure blood in the Angmagssalik District were studied, with some 150 persons examined radiologically and 133 having both X-rays and models of their dentition made. The conditions are compared with those in partly westernized ("domesticated") Eskimos of the same area. The effects of the native diet and way of life on dentition, on the parodontium and the jaws and their muscles are analyzed and discussed.

Attempt to evaluate data obtained from archeology, radiocarbon dating, and dendrochronology in the light of linguistic research, suggesting that the proto-Eskimo-Aleut stock was present in south Alaska over 3,000 years ago, and that the proto-Eskimo stock was between the latter area and the Bering Strait region between 3,000 and 1,000 years ago when it split into two major groups found at the present time. **Copy seen:** DSI.

Journal, May 1954. v. 70, no. 5, p. 533-36, fig.) 14 refs. **Other authors:** E. S. Goddard and J. A. F. Stevenson.

The diurnal variation in body temperature was found to be inversely related to that of the eosinophils and thus

is in phase with adrenocortical activity. No significant difference was found between schizophrenics and normal controls in the temperature- or eosinophil cycles, and there is no evidence that adrenocortical function is impaired in chronic schizophrenics. **Copy seen:** DSG.

"Nine new records of black flies bring the total number of species found in northern Manitoba to 21. Observations on the bionomics, especially of *Simulium venustum* Say, are given. [The studies were made in 1951 and 1952; twelve miles south of Churchill, primarily to gather information to use in laboratory rearing of this species.] The attachment of black fly larvae is determined by a mechanical factor, probably the water velocity gradient, perhaps conditioned by visual stimuli. Young larvae were heavily

preyed upon by *Hydra* sp. and adults by the white-crowned sparrow *Zonotrichia leucophrys*. Mermithid worms persisted as parasites in the pupal and adult stages."—Abstract, p. 99.

35274. HOEL, ADOLF, 1879- . Expéditions Norvégiennes au Spitsberg. (Revue de géographie, 1916-1921, new ser., t. 9, no. 5, p. 1-48, 8 illus., 2 text maps) **Title tr.:** Norwegian expeditions to Spitsbergen.

Contains the preliminary reports on the work of the expeditions of 1919, 1920 and 1921, to Vestspitsbergen, led by the writer. In 1919 the scientific party numbered 16 and work was carried on from July 3 to Aug. 31; in 1920 a party of 18 worked from July 7-Sept. 13; and in 1921 a party of 17 worked from July 3 to September 30. Topographic, hydrographic, and geologic surveys were carried out each year on the western coast of the island. Botanical work was done in 1920, and meteorological and declination observations were made in 1921. For each year, the voyage to Vestspitsbergen and the work of the various scientific parties throughout the summer is described, with discussion of results in each case. **Copy seen:** DLC.

35275. HOEL, ADOLF, 1879- . Norsk ishavsfangst, en fortægnelse over litteratur. Oslo, Jacob Dybwad, 1952. 23 p. (Norsk Polarinstitutt. Meddelelser, nr. 69) Text in Norwegian. **Title tr.:** Norwegian Sea catch, a survey of the literature.

The principal publications on catch of seals, bottlenose, Greenland shark, and furred animals. (except inaccessible recent Russian material) are listed under: bibliographies; periodical publications; information on the animals hunted; ice conditions; Norwegian seal, bottlenose, and Greenland shark fisheries; Canadian, Greenland, and Russian seal

catch; fur animal catch; East Greenland conflict; technology and utilization of the products of the catch; medicine; organizations, insurance, foreign politics, historical and biographical material. Brief annotations in Norwegian accompany some references. **Copy seen:** DGS.

35276. HOESSLY, HANS. Kraniologische Studien an eine Schädelserie aus Ostgrönland. Zürich, 1916. 54 p. 38 text illus. incl. curves, diagrs., and map, tables, 3 plates, 16 refs. (Schweizerische naturforschende Gesellschaft. Denkschrift, 1916. Bd. 53, 1) Text in German. **Title tr.:** A craniological study on a series of skulls from East Greenland.

Contains anthropometric data and evaluation of 36 Eskimo skulls, now at the Anthropological Institute in Zürich. They were secured by the writer in 1912 on the small East Greenland islands of Amaut and Siginganeke (65°38' N. 37°50' W.) while he was serving as physician of the Schweizerische Grönlandexpedition 1912-1913, headed by A. de Quervain. The skulls were taken from stone graves about 50 years old, and the author considers them to belong to the pure Eskimo race without any admixture of White or Indian blood. A general characterization of these skulls is given, and separate chapters deal with the vault, face, and lower jaw. The principal measurements are given in tables (p. 50-53), and comparisons made with other Eskimo groups and other races. The author considers the Eskimos the oldest of all the living human races. Migration of Greenland Eskimos is discussed. Previously listed as No. 7218. **Copy seen:** DGS; DLC.

35277. HÖST, PER, 1907- . What the world showed me from the Arctic to the jungle. London, Methuen, 1953. 223 p. illus. part. col. Translation by Katherine John, from the Norwegian *Hva verden viste meg*, Oslo, 1951 (297 p.), also pub. by Rand McNally, New York, 1955 (302 p.)

The author, a naturalist, tells about his experiences in sealing, especially at the edge of the White Sea ice field (Kvitsjø) from 1931. Races, biology, reproduction and migration of seals; hunting and tagging them, etc. are touched upon (p. 12-85). The remainder of the book deals with tropical America. Excellent photographs are included.

35279. HOGAN, EDMUND F. The end of the earth: Thule; here's what life's like for our servicemen now on their year's tour at the USAF's far northern outpost. . . . (Air force, July 1954. v. 37, no. 7, p. 43-44, 46, 49, illus.)

Contains description of facilities and living conditions at Thule Air Base, Greenland, which houses 4,000 U. S. Army and Air Force personnel. Recreation is stressed and University of Maryland courses are taught on the base. It consists of 114 barracks, 43 heated warehouses, 7 refrigerated warehouses, 6 large mess halls, 2 miles of runway, 6 hangars, vehicle storage buildings, and various others.

35280. HOGG, A. R. Air-earth current observations in various localities. (Archiv für Meteorologie, Geophysik und Bioklimatologie, 1950. Ser. A, Bd. 3, Heft 1-2, p. 40-55, 2 graphs, 7 tables) 12 refs.

In a discussion of the statistical relation between the conductivity of the atmosphere near the ground and the air-earth conduction current, results from 19 stations are examined. These include Scoresby Sund (E. Greenland), Fort Rae (Mackenzie District) and College-Fairbanks (Alaska). Total conductivity, potential gradient, and air-earth current are given for each station in a table. Arctic regions are also noted in discussion of annual variation of air-earth current and the thunderstorm theory of maintenance of the earth's electric charge.

35281. HOHN, E. O. In the home of the snow goose. (Beaver, Summer 1954. Outfit 285, p. 8-11, 4 illus.)

Short account of a visit by the author to the Sach's Harbour region of southwestern Banks Island (73° N. 122° W.) May 10-July 1953. Breeding grounds of the lesser snow goose in the Egg River valley are described, probably the largest single colony of geese in the western Canadian Arctic. A few blue geese and one Ross's goose were also seen. Note appears in autumn issue of *Beaver*, Outfit 285, p. 54, on the shooting in fall and winter 1953 in Alberta and California of five birds banded on Banks Island in summer 1953.

Contains tables of statistical data on birds ringed in Norway by the Government Game Investigation Service (Statens Viltundersøkelse), Stavanger Museum, and a few other institutions for the years 1914-50 and 1950-52, followed by the lists of recoveries for the years 1950-52. Many specimens were ringed or recovered in the northern regions of Scandinavia and Spitsbergen (43 specimens of pink-footed goose were ringed in Gipsdalen in 1952, by the Sherborne Spitsbergen Expedition). The reports show a considerable increase in the numbers of birds ringed as well as recovered over previous years.

Contains a key and critical notes on ten species of this fungal genus based chiefly on the characters of the spores. *D. praestabilis*, collected in Lapland (Jukkasjärvi parish, Mt. Nuolja) is included. Pt. 1-2 are *Arctic Bibliography*, No. 7294, 22674. *Copy seen:* MH-A.

35285. HOLMAN, H. L. Forest resources of the southern Yukon. Calgary, Alberta, Mar. 1944. 16 p. Mimeographed.

Interim report (to accompany map of forest cover) on field work during summer 1943 for one phase of the U. S.-Canadian North Pacific Planning Project. Distribution, composition, and general condition of the forest were investigated. Brief descriptions of primary tree species are given, and the Liard watershed, Rancheria and Swift watersheds, Teslin-Whitehorse section, Takhinni River valley, Dezadeash and Alsek watersheds, Klutane-White River water sheds, and Lewes-Yukon valley are described. Of the 111,637 sq. mi. mapped, approx. 16 percent is normally growing forest, 35.4 percent is unproductive forest, and the rest unforested or water. An estimated potential annual yield of 144,000,000 board ft. should be reduced by one quarter or one third to take care of areas which could not be logged economically. Possible markets for the lumber are considered and recommendations for further surveys are made.

35291. HOLTVED, ERIK, 1899- . Archaeological investigations in the Thule District III. Nûgdliit and Comer's midden. København, C. A. Reitzel, 1954. 135 p. 68 illus. incl. 4 plates, 2 text maps, 2 tables. (Meddelelser om Grønland. Bd. 146, nr. 3) 20 refs.

Contains results of author's work in the Thule region in 1946-1947, including excavations at Nûgdliit at the mouth of Granville Fjord (north side) about 50 km. north of Thule settlement and at Comer's midden (Comer A) at Thule settlement. Sixty excavated house sites at Nûgdliit are discussed (with plans). Objects found: hunting implements, means of transportation (toboggans, sledges, kayaks, etc.), tools, household utensils, clothing, ornaments, games and toys, and some unidentified artifacts are listed and individually described. The cultural and chronological position of the site is noted. Objects found at Comer's midden are also described, with a table showing the layers from which each specimen came. Previous investigations were made by the author at Thule in 1935-1937 (cf. *Arctic Bibliography*, No. 7369).

35292. HOLTZSCHERER, JEAN-JACQUES, and G. de Q. ROBIN. Depth

of polar ice caps. (Geographical journal, June 1954. v. 120, pt. 2, p. 193-202, 2 plates) 13 refs.

Includes description by J. J. Holtzschere (p. 193-97) of the seismic work done by Expéditions Polaires Françaises on the Greenland inland ice during 1949-1952. The two seismic teams covered more than 8000 km. between 1949 and 1951 and ascertained depths of ice at nearly 400 points. Measurements were made by reflection shooting at an average interval of 20 km. Refraction shots were made at several points, particularly at Camps IV, VI, and the Central Station. Results of the measurements are discussed and some seismograms are reproduced. Similar seismic work in Dronning Mauds Land, Antarctica, is described by G. de Q. Robin (p. 197-201). Comments are made by J. W. Glen (p. 201-202) on use of depth measurements of icecaps to check recent theories of glacier flow.

Contribution à la connaissance de l'inlandsis du Groenland . . . 1954. p. 1-26, text maps, graphs) 17 refs. Text in French. Summary in English and German. *Title tr.:* Seismic measurements.

"Results of 400 seismic soundings of the Greenland Ice Cap made by the French Polar Expeditions of 1948-1953 are discussed and graphed. Wave velocities in the ice and underlying rocky soil were determined by refraction shots; ice thickness was measured by reflection shots. Charges of 500 and 1000 gm. of explosive were used on the surface of névé; and shots 1.50 m. in the air were used for live ice. Two distinct layers of subglacial soil were determined by means of variations in wave velocity; the first layer of 200-300 m. may consist of frozen moraine material. Compensation required for values obtained decreased with the névé depth in tests verified by mechanical drilling. Points of seismic soundings and ice thickness are mapped; and E-W cross sections at different latitudes are graphed to show ice thickness and altitudes of ice surface and subglacial soil."—SIPRE.

35298. HONIGMANN, JOHN JOSEPH, 1914- . Cultural dynamics of sex; a study of culture and personality. (Psychiatry, 1947. v. 10. p. 37-47) 14 refs.

"Non-motivated determinants of sex in Kaska culture include economic patterns such as isolated bush residence, kinship, recreational forms, and marriage patterns. Data are presented to show the manner in which the childhood conditioned modal personality of the Kaska Indian, defines sexuality and how that definition determines some of the forms of sexual behavior and the emotional significance of it."—*Psychological abstracts*, 1947. v. 21, p. 38. The paper is based on the author's field work in summer 1944 and June-Dec. 1945 among the Kaska, some 200 in number, on the British Columbia - Yukon border. A general characterization of their culture: economic activity, social structure, religion, sexual attitudes, etc. introduce the study.

35299. HONIGMANN, JOHN JOSEPH, 1914- , and I. HONIGMANN. Drinking in an Indian-White community. (Quarterly journal of studies on alcohol, Mar. 1945. v. 5, no. 4, p. 575-619) 13 refs.

Author's observations were made in summer 1944 at a trading post, Delio, near the Alaska Highway. The natives of various Indian stocks, their culture, in particular child rearing, and economy are described. Techniques of making intoxicants, drinking customs, behaviour, its analysis and interpretation are presented; followed by a discussion of parallel problems in white society.

35300. HONIGMANN, JOHN JOSEPH, 1914- . Incentives to work in a Canadian Indian community. (Human organization, 1949. v. 8, no. 4, p. 23-28)

Contains observations and data collected between July 1947 and June 1948 at Attawapiskat, a trading post serving about 460 Cree Indians, on the west coast of James Bay, northern Ontario.

The study was made on behalf of the National Committee for Community Health Studies (Canada). These Indians were found industrious whenever the work was related to their sense of values and offered quick reward, backed by public opinion; but Whites find them slothful and unmotivated by wages. Adapting work conditions to their expectations and ideas, partial payment in food, etc., are recommended.

of polar ice caps. (Geographical journal, June 1954. v. 120, pt. 2, p. 193-202, 2 plates) 13 refs.

Includes description by J. J. Holtzsch-
scherer (p. 193-97) of the seismic work
done by Expéditions Polaires Françaises
on the Greenland inland ice during 1949-
1952. The two seismic teams covered
more than 8000 km. between 1949 and
1951 and ascertained depths of ice at
nearly 400 points. Measurements were
made by reflection shooting at an average
interval of 20 km. Refraction shots were
made at several points, particularly at
Camps IV, VI, and the Central Station.
Results of the measurements are dis-
cussed and some seismograms are repro-
duced. Similar seismic work in Dronning
Mauds Land, Antarctica, is described by
G. de Q. Robin (p. 197-201). Comments
are made by J. W. Glen (p. 201-202) on
use of depth measurements of icecaps to
check recent theories of glacier flow.

Contribution à la connaissance de l'inlandsis du Groenland . . . 1954. p. 1-26, text maps, graphs) 17 refs. Text in French. Summary in English and German. *Title tr.:* Seismic measurements.

"Results of 400 seismic soundings of the Greenland Ice Cap made by the French Polar Expeditions of 1948-1953 are discussed and graphed. Wave velocities in the ice and underlying rocky soil were determined by refraction shots; ice thickness was measured by reflection shots. Charges of 500 and 1000 gm. of explosive were used on the surface of névé; and shots 1.50 m. in the air were used for live ice. Two distinct layers of subglacial soil were determined by means of variations in wave velocity; the first layer of 200-300 m. may consist of frozen morainic material. Compensation required for values obtained decreased with the névé depth in tests verified by mechanical drilling. Points of seismic soundings and ice thickness are mapped; and E-W cross sections at different latitudes are graphed to show ice thickness and altitudes of ice surface and subglacial soil."—SIPRE.

35304. HOOD, A. D. An analysis of radar ice reports submitted by Hudson Bay shipping, 1953. Ottawa, May 1954.

4 p., map, graph. Mimeographed. (National Research Council of Canada. Radio and Electrical Engineering Division. ERB-330)

"Ice reports . . . were analyzed to determine whether . . . satisfactory radar results are being achieved by merchant marine radar operators when navigating in ice-infested waters. On all ice formations of berg size, the ranges recorded were found to be in reasonably close agreement with theoretical and experimental data. There was not a sufficient number of flocs and growlers reported to arrive at any definite conclusion regarding the smaller types of ice. A survey of the reported ice locations reveals that 90 percent of the ice encountered by a ship on the Port Churchill route occurs between Charles Island and the eastern approaches to Hudson Strait [between 63°-73° W.] . . . a distance of 600 miles." Modification of the ice report forms now in use would be desirable.—From author's abstract.

This report is substantially the same as that included in Canada. Dept. of Transport. *Navigation conditions on the Hudson Bay Route . . . 1953*, q. v. One graph is added.

35307. HOPKINS, DAVID MOODY, 1921- , and R. S. SIGAFOOS. Role of frost thrusting in the formation of tussocks. (American journal of science, Jan. 1954. v. 252, no. 1, p. 55-59) 10 refs.

Contains discussion of the authors' previous paper (*Arctic Bibliography*, No. 22706) in the light of criticism by S. Taber (*Arctic Bibliography*, No. 26583). Frost thrusting—lateral soil movement during freezing—plays a major part in the formation of cottongrass tussocks, peat rings, vegetation polygons, characteristic plant forms, and vegetation patterns of tundra regions, according to the

authors. Frost heaving—upward displacement of the surface—is a factor, but not the only factor, in the development of these forms. Mechanisms of the lateral and upward pressures developed during soil freezing are discussed with particular reference to their influence on tussock formation. **Copy seen:** DGS.

gineer School. Unpublished research paper) 12 refs.

"Methods adopted in Russia and Alaska for construction on permafrost are reviewed. Permanent structures on coarse-grained, non-frost-susceptible subgrades of adequate depth may be built using temperate-zone procedures, provided that all surface moss, peat, and fine-grained frost-susceptible materials are removed. Construction where a normal ground surface is underlain by permafrost at 2- to 5-ft. depths with an active zone of moss, peat and fine-grained frost-susceptible soils should be raised about 2 ft. above the ground surface on treated timber pilings or reinforced-concrete piers with spreader footings extending well into the permafrost. Improper site selection has caused the majority of arctic structural failures. Silty soils should be avoided; but negligible deformation occurs in structures erected on coarse-grained soils, which usually withstand seasonal freezing and thawing."—SIPRE.

35322. HOWSE, CLAUDE KILBORN, 1907- . The mineral industry of Newfoundland, 1953. (Canadian mining journal, Feb. 1954. v. 75, no. 2, p. 110-111, illus., table)

Includes notes on exploration in Labrador where six companies are operating. Drilling in the Wabush Lake area (53°02' N. 66°52' W.) indicated more than one hundred million tons of "wash" iron ore.

Copy seen: DGS.

35323. HOYT, E. "JACK." Beware the snowshower. (Air facts, Jan. 1954. v. 17, no. 1, p. 7-10)

Contains discussion of hazards which pilots of light planes may encounter while flying in snow showers. These showers can occur at any time or place where conditions are favorable to their development, including Alaska and Canada. Snow falling from an overcast usually obscures the base of the clouds for thousands of feet, reducing visibility, in many cases, to less than one-half mile. If the snow is wet, the probability of icing is almost certain. Low flight under poor visibilities is hazardous due to commercial radio towers in rural or sparsely settled areas, and the VHF transmission as well as reception is limited.

35324. HOYT, JOHN CLAYTON, 1874-1946. A water-power reconnaissance in southeastern Alaska. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 147-49, map, diagrs. incl. fold.)

Describes detailed investigations of water power resources of the Ketchikan, Juneau and Skagway districts. Discusses general topographic features, climate, vegetation, runoff, industrial conditions, and power possibilities, with a list of developed water powers in Alaska in 1908. Southeast Alaska is a deeply dissected mountainous country, covered with dense forests, and greatly indented by many bays, fiords, and inlets from the Pacific. Rainfall is high along the coast (up to 130 inches), declining inland to from 88 to 26 inches. Mostly short streams with large fall and small catchment areas. Numerous lakes, however, offer water storage possibilities.

Copy seen: DLC.

35325. HOYT, JOHN CLAYTON, 1874-1946. Water supply of Nome region, Seward Peninsula, 1906. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1906. Bulletin, 1907, no. 314, p. 182-86, 3 tables)

Notes that U. S. Geological Survey started systematic measurements of the flow of Alaska streams in the summer of 1906, confined in that year to Seward Peninsula. Lists 45 stream-gaging stations at which discharge measurements were made. Measurements for 1906 are given of the mean weekly water supply available for use back of Nome, mean runoff at gaging stations, minimum flow of streams on Seward Peninsula, and rainfall for three stations in the summer of 1906. cf. *Arctic Bibliography*, No. 7463 for author's paper on this work.

35327. HUBER, ALFRED. Churchill, ein Aussenposten an der Hudson Bay. (*Geographica Helvetica*, 1954. Bd. 9, Nr. 1, p. 16-26, illus., text map) Text in German. Summary in French. *Title tr.*: Churchill, an outpost on Hudson Bay.

Churchill's importance as a port of entry to interior Canada and as a center of administrative, economic, and military activity in the Arctic is noted. Its history is outlined: exploration in the early 17th century, Hudson's Bay Company post in the 18th century, construction of the railroad to the Bay in 1930, climatic problems in use of Churchill as a port; finally its growing importance during and after World War II as a base for reconnaissance and surveillance of the Canadian Arctic is stated.

35328. HUBER, LOUIS R. Opening up Alaska; the story of Northern Consolidated Airlines. (*Eso* air world, July-Aug. 1953. v. 6, no. 1, p. 2-6, illus.)

History of the growth of this airline, with headquarters at Anchorage. From the early 1930's bush pilots established transport services in various localities in Alaska; in 1947, six such pooled resources to form Northern Consolidated Airlines, with Raymond Peterson, early bush pilot of the lower Kuskokwim, as president. The company's promotion of the tourist trade is stressed. Its 2500-mile route network is shown (map inside front cover): Anchorage and Fairbanks are linked with scattered communities of central and western Alaska, using DC-3 mainline and bush plane schedules.

35329. HUBLEY, RICHARD CARLETON. Albedo variations over an old snow surface. (American Meteorological Society. Bulletin, Nov. 1954. v. 35, no. 9, p. 446)

Contains abstract of paper presented at the 134th National Meeting of the Society, Dec. 28-30, 1954, Berkeley, Calif. In summer 1954, incoming and reflected radiation were measured over the surface of an old snowpack above the firnline on Lemon Creek Glacier, Juneau Ice Field, Southeast Alaska. Methods are described and variations of

albedo at different times of day and on clear, overcast, and foggy days are noted. Variations "appear due primarily to the angle of the incident radiation, and secondarily to changes in the physical structure of the snow surface."

Copy seen: DGS.

35330. HUBLEY, RICHARD CARLETON. The problem of short period measurements of snow ablation. (Journal of glaciology, Oct. 1954. v. 2, no. 16, p. 437-39) 5 refs.

"A simple equation is developed for ablation in a snow cover on the basis of the principle of conservation of mass. Sinking of the snow surface as measured with ablation stakes or ablatographs is commonly accepted as a measure of ablation. In so doing, a principal term associated with density changes in the snow with time in the above-mentioned equation is neglected. In a few investigations, ablation was determined from sinking of the snow surface alone, and also by other methods. These investigations demonstrated errors in the calculated ablation values resulting from neglect of density changes in the order of 15-20 percent for long observation periods, and as great as 65 percent for short observation periods. The terms are also discussed which must be measured to determine short period values of melting and evaporation of the snow for analyses of the heat exchange at a snow surface."

Author's abstract. Investigations on the Kårsa Glacier in northern Sweden, and on Taku and Lemon Creek Glaciers (Juneau Ice Field), Southeast Alaska, are briefly mentioned. The author worked on Lemon Creek Glacier in summer 1953.

Deals with the "disconnection" of the neuro-vegetative system (neuroplegia) during hypothermia; methods of inducing the latter; such through anesthesia; local, anti-shock hypothermia, etc.

Copy seen: DSG.

35337. HULBURT, EDWARD OLSON, 1890- . Magnetic storms, aurorae, ionosphere and zodiacal light. (Scientific monthly, Feb. 1954. v. 78, no. 2, p. 100-109, 7 fig., photo) 31 refs.

"The following topics are considered: (1) magnetic storms, particularly the characteristics of those with sudden commencements; (2) the ultraviolet light theory of magnetic storms and auroras which attempts a unified explanation of these phenomena as well as ionospheric storms, zodiacal light and Gegenschein; (3) the solar corpuscular theory with brief mention of Störmer, Chapman and Ferraro, Martyn, and Alfvén; (4) the experiments of Meinel and Gartlein on the aurora; (5) Bennett and Hulburt's theory (*see their: Magnetic self-focusing of auroral protons*, Physical review, Sept. 15, 1953. v. 91, no. 6, p. 1562) to explain how high-speed protons may be deflected to auroral zones; and (6) zodiacal light and Gegenschein. In conclusion, the author states that there are 2 effects that should always be kept in mind when thinking about the outer fringe of the earth's atmosphere: 'the sweep-up by the earth of interplanetary material and the electrical charge brought to the earth by cosmic rays.' Schematic diagrams illustrate several of the theories reviewed."—*Meteorological abstracts and bibliography*, Mar. 1954. v. 5, no. 3, p. 422.

35338. HULBURT, EDWARD OLSON, 1890- . Survey of the brightness of the night sky. Washington, D. C., U. S. Naval Research Laboratory, Apr. 23, 1948. 13 p. 2 charts. (*Its*: report no N-3263)

Sky brightness data are presented for clear moonless nights in North and South America, the Pacific and France. The data refer to points in the sky around the compass from the horizon to the zenith, and include a few values for the Milky Way, the zodiacal light and the

Magellanic Clouds. A few data indicated that in the absence of aurorae, brightness increased with latitude from north latitudes 44° to 80°. At Godhavn, Greenland, latitude 69°, for average aurorae the sky illumination on a horizontal plane was about twice its value for no aurorae, and about three times its value for a bright aurora.

Contains a list of about 100 lichens, mostly from Labrador and Newfoundland, but also some other localities; at least 30 species collected in Labrador are included.

Copy seen: MH-BL.

35341. HUME, GEORGE SHERWOOD, 1893- . The lower Mackenzie River area, Northwest Territories and Yukon.

Ottawa, Queen's Printer, 1954. 118 p. 5 illus. on 3 plates, 17 maps (3 fold.), cross-sections, tables. (Canada. Geological Survey. Memoir 273) 78 refs.

Contains detailed geology of the Mackenzie River and bordering regions from Wrigley (63°16' N. 123°36' W.) to 68° N., centering on the Norman Wells area. Information from former reports is brought up to date by data from geological work and aerial photography done during the World War II Canol Project and post-war exploratory drilling for oil and gas. Stratigraphy and the structural features of each region are examined in detail. The geology and production data of the Norman Wells oil field is discussed and logs from unsuccessful wells in 21 locations in the Mackenzie River basin are given. It is unlikely that further attempts will be made in the near future to find oil near Norman Wells, but other parts of the Mackenzie Basin may be explored. Best prospects for oil are in Devonian and Upper Silurian beds.

35345. HUSEMEYER, W. W. Report on snowmobile, Penguin Mark II. Washington, D. C., Sept. 29, 1949. 32 p. illus., diags. (U. S. Coast and Geodetic Survey. Special report, no. 142 (1949))

"The snowmobile was tested to determine its adaptability for use as a prime mover in Alaskan surveying operations, and its performance is compared with that of the Weasel. The advantages of the Penguin include superior riding quality, greater carrying capacity, higher towing capacity, a nominal upkeep cost, and higher operating speed over comparable terrain. The disadvantages include greater maintenance cost per mile, a generator too small to carry a full electrical load, and the lack of a winch. Recommendations include redesign of the suspension system to eliminate excessive pitching during cross-country operation, a different type of tire, improved bogie-wheel seals, strengthened sprockets, and more durable bogie springs."—SIPRE.

35346. HUSTICH, ILMARI, 1911- . The lichen woodlands in Labrador and their importance as winter pastures for domesticated reindeer. Helsinki, 1951. 48 p. 18 illus., 5 text maps, 2 diags., 4 tables. (Acta geographica 12, no. 1) 60 refs.

Contains description of the conifer lichen and conifer dwarf shrub lichen forest of the Labrador taiga and forest

tundra regions (approx. 50°-57° N.). Vegetation of 16 sample plots from the east coast of Hudson Bay and James Bay and from the Knob Lake region of central Labrador is described in detail. Vascular plants, cryptogam cover, and beard lichens are listed for each plot. Ground vegetation of lichen woodlands in the Northwest Territories of Canada and in northern Europe and Asia is similar; the dominating lichen, *Cladonia* (*Cladonia*) *alpestris*, is the same species in each case, although tree species dominating the woodlands differ. Snow cover in the Labrador lichen woodlands (with relation to reindeer grazing), the ecology of the lichen cover, and its recovery after fire or winter grazing are discussed. The woodlands are economically unimportant and lie outside the area of accessible forests. The Labrador Peninsula has good winter pasturage for at least 500,000 reindeer, and the lichen woodlands there "seem at present . . . to be the best winter ranges for reindeer in the whole of North America and Europe." Nutritional value of reindeer lichen is considered in an appendix.

Copy seen: DLC.

35347. HUSTICH, ILMARI, 1911- On forests and tree growth in the Knob Lake area, Quebec-Labrador Peninsula. (*Acta geographica*, Helsinki, 1954. v. 13, no. 1, p. 1-60, 19 illus., text map, diagr., 8 graphs, 8 tables) 56 refs.

Contains further results of investigations Aug. 8-Sept. 4, 1948, in the region 54°50' N. 66°42' W., supplementing the forest-botanical information published in the writer's previous reports (cf. *Arctic Bibliography*, No. 22744, 35346). Purpose of this paper is mainly to give a first impression of a virgin forest area. Vegetation in the Precambrian sedimentary bedrock of the Labrador Trough "seems to be richer, and the tree-growth more luxuriant than in the surrounding granite-gneiss area." Tree species, bush species, and the vertical tree line are briefly discussed; sample plots (of forest habitats) not dealt with in the two previous papers, are noted here. Discussion based on analysis of the plots and surrounding region, includes: forest vegetation, cryptogams, forest types, generative reproduction of forests, adventitious roots, reproduction after fires. Growth in height was studied on seedlings, and radial growth, with the aid of a Swedish increment borer. Tables of tree growth

series are given for black and white spruce.

35353. ĀDRINTSEV, NIKOLAI MIKHAILOVICH, 1842-1894. Osuzhdaemyĭa na smert' plemena. (Sibirskii sbornik, 1904. p. 1-31) 10 refs. Text in Russian. **Title tr.:** Tribes condemned to death.

A humanist discusses the demographic and economic situation of Ostyaks and Samoyeds (also in part, the Voguls and Tungus), resulting from their contact

with the civilization brought by the Russians. The economic situation is steadily deteriorating: Ostyaks are deprived of their best fishing grounds, natives generally are in perpetual debt to usurious merchants, the price of native products is low and that of imported goods high. Permanent starvation and famine fever (typhus) are the result. The latter and syphilis are the most common diseases. Statistics on disease and mortality of Ostyaks, and vital statistics of Ostyaks and Samoyeds in the Berezovo district are given; they show the female mortality higher and numbers lower than the male. Under the merchants' influence, native ethics have deteriorated. These peoples' extinction is inevitable, concludes the writer, and is caused by the introduced civilization.

ĬAKUNIKA, L. I., *see* Leningrad. Arkticheskiĭ . . . institut. Istoricheskiĭ pamiatnik russkogo arkticheskogo . . . 1951. No. 35857.

35356. ĬANIKOV, G. V. Dmitriĭ Ĭakovlevich Laptev. (*In:* Lupach, V. S. Russkie moreplavately, 1953, p. 99-110, text map) Text in Russian.

Contains a sketch of the life of this naval officer and of his exploration of the northern coast of Siberia between the Lena and Kolyma Rivers. He took part in the Great Northern Expedition, relieving the party of Lt. Lasinius in the Lena delta in 1736. During next six years, on the *Irkutsk*, he explored and surveyed the coast between the Lena and Kolyma, and described the deltas of the Lena, Indigirka and Kolyma Rivers. When all his attempts to reach Bering Strait were frustrated, he sent a land party, in 1741 from the mouth of the Kolyma to Anadyrskiy Ostrog on the Anadyr, and the next year sailed down this river to its mouth.

35357. ĬANIKOV, G. V. Vasilĭ Pronchishchev, Khariton Laptev, Semen Chelĭuskin. (*In:* Lupach, V. S., Russkie moreplavately, 1953, p. 81-98, text map) Text in Russian.

Contains account of the work of the section of Bering's Great Northern Expedition, which surveyed the northern coast of Siberia between the Yenisey and Lena Rivers. In 1735 Lt. Pronchishchev, the head of it, sailed on the sloop *Yakutsk* to the mouth of the Lena, then on to the Olenek River, where he wintered. The next year he reached the Anabar, but died of scurvy on the return trip. He was succeeded in 1737 by KH. Laptev, who continued the survey, on the *Yakutsk*; when the sloop was destroyed by the ice in 1740, he organized land parties which finally surveyed the entire Taymyr Peninsula. One of the most difficult parts of the work was carried out by S. I. Chelĭuskin who explored the northernmost part of the Peninsula and

of Asia (Mys Chelyuskin and Poluostror Chelyuskin). **Copy seen:** DLC; MH.

35358. ĬANKOVSKIĬ, V. M. Osnovnye rezultaty izucheniĭa chetvertichnykh otlozhenĭiĭ i geomorfologii Malozemel'skoi tundry. (International Quaternary Association. *U.S.S.R. section. Trudy sovetskoi sekciiĭi merzhdunarodnoiĭ assotsiatsiiĭi po izucheniuiĭu chetvertichnogo perioda (IN-QUA)*, 1939. vyp. 4, p. 35-39, map) Text in Russian. **Title tr.:** Main results of the study of the Quaternary deposits and geomorphology of the Malozemel'skaya Tundra.

Contains information on the location of the tundra (66°40' to 60°N. 48°30' to 54°30' E.) and the general characteristics of its surface; its pre-Quaternary deposits; Quaternary deposits, including young and old moraines, marine deposits, continental deposits, etc.

Copy seen: DGS.

35359. ĬANOVSKIĬ, A. Frit'of Nansen. (*Nasha strana*, June 1940. no. 6, p. 23-31, port., illus., map) Text in Russian. **Title tr.:** Fridtjof Nansen.

Contains brief popular biographical sketch of Nansen; his youth and family life; his Greenland and North Polar expeditions, scientific work and political activities are described, and the significance of his achievements and impact of his personality stressed.

Copy seen: DLC.

35360. ĬANOVSKIĬ, B. Liĕto v Bol'shezemel'skoi tundriĕ, Mezenskago uĕzda Arkhangel'skoi gubernii. (Morskoi sbornik, Sept. 1859. t. 43, no. 9, smĕs', p. 1-14) Text in Russian. **Title tr.:** Summer in the Bol'shezemel'skaya Tundra, District of Mezen, Govn. of Arkhangel'sk.

Contains an account of the summer camping of the Samoyeds on the shores of the Arctic Ocean, fishing and fowling on the Vaygach Island; their oppression by the Zyryans of Izhma and exploitation by Russian traders who take a man's entire season's work for a few bottles of vodka. Includes notes on the Samoyed birch bark tent, reindeer and dogs, summer work of the men and women, religious beliefs (mother of gods lives on the Vaygach Island), etc.

Copy seen: DLC.

35361. ĬASTREBOV, E. V. Vodopad na reke Novyiĭ Semĭachik. (*Priroda*,

Sept. 1954. no. 9, p. 115-16, illus.) Text in Russian. **Title tr.:** The waterfall on the Novyy Semyachik River.

Contains a description of a waterfall (20 m. high, 25-28 m. wide) 20 km. from the mouth of this river (approx. 54°07' N. 159°58' E.) in eastern Kamchatka (Kronotskiy Bay).

35379. INNES, MORRIS JAMES SAGE, 1907- . Gravity anomalies in north-western Canada. (International Geodetic and Geophysical Union. Association of Geodesy. Bulletin géodésique, June 1949. new series, no. 12, p. 162)

A study of isostatic anomalies for 23 stations in an area between 55°-70° N., bounded on the east by Hudson Bay and on the west by the Athabaska, Slave, and Mackenzie Rivers, shows that all Precambrian stations have negative anomalies (Churchill and Cambridge Bay cited as examples), while stations such as Arctic Red River and Good Hope near the Mackenzie River have positive anomalies. The center of the Precambrian area may have been the center of the Keewatin ice sheet of Pleistocene time, and negative anomalies may be due to lack of isostatic adjustment following removal of glacial loads.

35381. INSTITUTE OF NAVIGATION. Annual reports of the technical committees, for the 12-month period ending 30 May 1949. Washington, D. C., Aug. 16, 1949. 96 p.

Presents (p. 20-26) findings of the Technical Development Committee for Air. The unanimous opinion of the committee is that the Modified Lambert Projection, in accordance with the Canadian formula, be adopted as the projection for the standard long range polar navigational chart. The chart shall extend

to the 65th parallel of latitude. The gnomonic projection will be necessary for determining precise great circles as required, track mercators for special long distance route operations, and azimuthal equidistant charts for special cases. Recommendations made for polar navigation charts in regard to tint and terrain presentation are given.

35382. INTERNATIONAL BOTANICAL CONGRESS. 7th, Stockholm, 1950. Proceedings of the Seventh International Botanical Congress, Stockholm, July 12-20, 1950. Edited for the Executive Committee by Hugo Osvald and Ewert Åberg. Stockholm, Almqvist and Wiksell; Waltham, Mass., Chronica Botanica Co., 1953. 899 p., 20 plates, text maps, graphs, tables.

Contains minutes, addresses and papers from the plenary sessions; resolutions; votes of thanks; general evening lectures; list of delegates and additional members. Summaries are given of the post-congress excursions and of papers delivered at the sectional meetings on agronomy, cytology, experimental ecology, experimental taxonomy, forest botany, genetics, morphology, mycology and bacteriology, nomenclature, paleobotany, phytogeography, phytopathology, plant physiology, taxonomy, and on the palynological conference. The summaries are, in general, extensive, reproducing some papers almost *in extenso*. Those on the North (except Brunel's) are listed in this Bibliography under the authors' names:

35383. INTERNATIONAL BOUNDARY COMMISSION (U. S., ALASKA, AND CANADA). Joint report upon the survey and demarcation of the boundary between Canada and the United States from Tongass Passage to Mount St. Elias. In accordance with the convention of Jan. 24, 1903; the award of the tribunal appointed under the convention, signed at London, Oct. 20, 1903; an exchange of notes between the governments of Great Britain and the United States relative to the award, signed at Washington, Mar. 25, 1905; and the treaty signed at Washington, Feb. 24, 1925. Ottawa, Queen's Printer, 1952. 2 v: xiv, 365 p. 82 illus., 4 diagrs. 47 maps (incl. 28 fold. in pocket; and atlas vol. of 14 maps)

Contains texts of conventions, awards, notes, letters, proclamations, and treaties between the U. S., Great Britain, and Canadian governments relative to the Alaska-Canada boundary between 1903-1925; description of field operations for each season 1904-1914, 1920; maintenance under treaty of 1925 with description of field seasons 1925, 1927, 1929, 1936,

1938, 1944, 1946-1948; outline of field and office methods; and (p. 147-80) description and definition of the International Boundary line region from Tongass Passage to Mount St. Elias, in which the boundary points are enumerated and their exact geographic location and description given.

Appendices (p. 183-349) comprise (1) historical sketch; (2) the boundary treaties; (3) explorations prior to the convention of 1903; (4) elevations and descriptions of bench marks; (5) geographic positions and descriptions of triangulation stations. An alphabetical index to boundary points, reference monuments, and triangulation stations, also a general index are added.

Maps. Historical maps and 24 triangulation sketches are included in the text vol. In a separate atlas volume (with title: *Joint maps of the International Boundary between United States and Canada, from Cape Muzon to Mount St. Elias*) are 13 signed joint maps (and index map) of the boundary as established by the treaties, etc. set forth in the text. Scale: 1:250,000, contour interval 250 ft. **Copy seen:** DLC.

35384. INTERNATIONAL COMMISSION FOR THE NORTHWEST ATLANTIC FISHERIES. Annual proceedings, v. 3, for the year 1952-53. Halifax, N. S., the Commission, Forrest Building, 1953. 86 p. text fig., maps, tables. 13 refs.

Contains five parts: (1) administrative report (p. 5-10) by E. M. Poulsen, for the year ending June 30, 1953, with information on headquarters, secretariat, officers, panel membership and activities, cooperation with international organizations, research, statistics, appendix with financial statement.

2. Report of the third annual meeting, May 25-30, 1953, by J. L. Kask (p. 11-22) giving time, place, participants; agenda; staff matters; budget; amendments to Rules of Procedure; research, statistics and regulations; publications, etc.

Part 3 is Summaries of Research 1952 presented by countries:

Canadian groundfish research in the convention area during 1952, by W. Templeman and others (p. 25-27) contains account of exploratory fishing in areas 2, 3, and 4 (Labrador Sea, Grand Banks of Newfoundland and southward); also research on hydrography, vital statistics, growth, fish movements, etc.

Danish researches in subarea 1 in 1952, by P. M. Hansen (p. 28-33) deals with research conducted in Baffin Bay-Davis Strait by two vessels; it covered occurrence of cod eggs and larvae, age composition, size, growth rate of cod, tagging experiments.

Summary report of the cruise of the French research vessel "President Theodore Tissier" in the region of Newfoundland and Labrador, subareas 2 and 3, Aug.-Sept. 1952, by J. Ancellin (p. 34-37) includes information on the routes taken; temperatures; age and size determinations of cod; growth and age differences among sexes; etc. Some depth and bottom records were also made.

Icelandic researches: analysis of trawler-caught cod in Greenland waters in 1952, by J. Jonsson (p. 38-40) includes information on age and size composition of catches; growth as compared with Icelandic conditions; catch per unit of effort.

Summary of research work by Norway in subarea 1 in 1952, from Fiskeridirektoratets Havforskningsinstitut, Bergen (p. 41-45) presents data on temperature and catches; fishing intensity and yield; size and age composition of catch. All information pertains to line-caught cod.

Brief preliminary report of the scientific Spanish researches made in Newfoundland waters aboard the trawler *Vendaval*, Feb.-Mar. 1953, by the Spanish delegation (p. 46) includes: species studied (6) as to size, sexual stage, food, etc.; also plankton, salinity, temperature, etc.

Summary of research work carried out by the United Kingdom in the I.C.N.A.F. area in 1952, by C.E. Lucas and R.S. Wimpenny (p. 47-48) concerns conditions of bottom, icebergs, currents and weather; composition and quality of catches; tagging experiments, etc.

United States research in convention area during 1952, by H.W. Graham (p. 49-51) concerns the southern sections of the area.

Summary by subareas, by E.M. Poulsen (p. 52-55) contains a systematized summary of the foregoing reports according to subareas, each subarea in turn being discussed according to (a) hydrography and (b) fishes.

Pt. 4 is (1): Identification of major groundfish stocks in subarea 4 of the Northwest Atlantic convention area, by W. R. Martin (p. 57-61); and (2): TEMPLEMAN, W. Knowledge of divisions of stocks of cod, haddock, redfish

and American plaice in subareas 3 and 2 of the Northwest Atlantic convention area (p. 62-66). The second paper is abstracted in this Bibliography under the author's name.

Pt. 5 is Contributions to a special meeting on long-term hydrographic changes and their effects on fish stocks in the Northwest Atlantic area, by J. L. Kask and others (p. 67-86), of which two papers are abstracted in this Bibliography under their authors' names, viz.:

TÄNING, Å. V. Long term changes in hydrography and fluctuations in fish stocks.

TEMPLEMAN, W., and A. M. FLEMING. Long term changes in hydrographic conditions and corresponding changes in the abundance of marine animals.

Copy seen: CaMAI.

35385. INTERNATIONAL COMMISSION FOR THE NORTHWEST ATLANTIC FISHERIES. Annual proceedings, v. 4, for the year 1953-54. Halifax, N. S., the Commission, Forrest Building, 1954. 104 p. illus., maps, graphs, tables. 56 refs.

Contains five parts: (1) administrative report (p. 5-10) by E. M. Poulsen, on headquarters; secretariat and staff; panel memberships; publications; meetings; research; regulations, etc. Financial statements appended.

2. Report of fourth annual meeting, June 14-18, 1954, by S. Bates, p. 11-22. Includes information on time and place; agenda; participants; budget; reports; etc. with address by G. L. Kesteven on the need of increasing the world's seafood production, desirability of surveys of world marine resources, economy, maps; etc.

Part 3 is Summaries of Research 1953 presented by countries:

Canadian groundfish research in the convention area during 1953, by W. Templeman and W. R. Martin (p. 23-27). The first deals with the Hamilton Inlet Banks, the second with the Newfoundland fishing areas. Cod, haddock, plaice and redfish were studied; also hydrography, population dynamics, nets, etc.

Danish researches in subarea 1 in 1953, by P. Hanson (p. 28-32) concerns southwestern Greenland waters: hydrography; eggs and young of common fish; tagging experiments; etc.

Hydrographic conditions in the eastern part of Labrador Sea and Davis Strait, 1953, by F. Hermann (p. 32-36) includes

determinations of temperatures and currents; phosphates; plankton prospects.

French researches carried out from the frigate "l'Aventure" in 1953, by P. Desbrosses (p. 37) contains observations on hydrography and plankton from dispersed stations.

Icelandic researches on trawl-caught cod on the West Greenland Banks in 1953, by J. Jonsson (p. 38-39). The material investigated was from the Fylla Bank. Size, age, sex, growth rate, etc., were studied.

On the Norwegian pelagic long-line fishery in the Holsteinsborg Deep, by R. Rasmussen (p. 40-45) presents information on production (1953 season); trends of this fishery; effects of temperature; catch composition, etc.

Portuguese researches in 1953, by J. Mousinho de Figueiredo (p. 46-48) contains data on cod from several aretic banks regarding: conversion factors; size and sex composition; year classes in catches.

Report on the cruise carried out by the Spanish vessel "Vendeval" in the waters off Newfoundland Feb.-Apr. 1953, by O. R. Martin and R. L. Costa (p. 49-54) presents data on temperature and yield; catches per unit of fishing effort; size, age, etc., of cod, haddock, pollock and hake, etc.; also: temperature, salinity, phosphates.

United Kingdom research report for the year 1953, by C. E. Lucas (p. 55). Only measurements and age determinations on cod were done.

English trawl fishery at Cape Farewell, by G. C. Trout (p. 55) contains data on length and age distribution of cod from that area.

United States research in convention area during 1953, by H. W. Graham (p. 56-59), includes biology of haddock and redfish; effects of mesh regulations, etc.

Compilation of research reports by subareas, by E. M. Poulsen (p. 60-65), contains summary of above reports, discussed according to subareas (1-5) and within this division dealing with hydrography, fish biology, catches, etc.

Pt. 4 is HACHEY, H. B., and others. The waters of the ICAF convention area (p. 67-100), abstracted in this Bibliography under the authors' names.

Pt 5 is Lists of Scientists and laboratories engaged in the various branches of the Commission's work (p. 103-104).

35386. INTERNATIONAL COMMISSION FOR THE NORTHWEST ATLANTIC FISHERIES. Report by the chairman concerning the first annual meeting, Washington, D. C., April 2-10, 1951, with appendices. [Washington, D. C., 1951] v, 51 p., fold. map (U. S. Dept. of State publication 4244. International organization and conference series, 1, 15)

H. J. Deason's report includes statement of the origin and development of the Commission which is to coordinate research and conservation of fisheries off the west coast of Greenland, the east coast of Canada and the northeast coast of the United States; contracting governments (Canada, Denmark, Iceland, United Kingdom and United States), non-contracting bodies (France, Italy, Norway, Portugal, Spain, FAO, International Council for the Exploration of the Sea). Organizational activities are reported: addresses, agenda, committees, panels, etc. *Appendices* (14) include text of the convention of Feb. 8, 1949, and of the Final Act of International Northwest Atlantic Fisheries Conference Jan. 26-Feb. 8, 1949; proposed research program for the Baffin Bay-Davis Strait region; and chart of the area subject to the Convention. Five sub-areas are indicated, of which three are within the scope of *Arctic Bibliography*.

The meeting is summarized in *Polar record*, Jan. 1953. v. 6, no. 45, p. 675.

Copy seen: CaMAI.

35387. INTERNATIONAL COMMISSION FOR THE NORTHWEST ATLANTIC FISHERIES. Second annual report, for the year 1951-52. St. Andrews, N. B., the Commission, 1952. 68 p. 8 fig., 7 tables. 20 refs.

Contains four parts: (1) administrative report (p. 5-10) by W. R. Martin, on: headquarters, secretariat, officers, ratifications of member governments, news service, cooperation with international organizations, panels; research and statistics, financial statement.

2. Report of the second annual meeting, June 30-July 9, 1952 by A. T. A. Dobson (p. 11-22). This includes information on time and place of meeting, participants and agenda, cooperation with international organizations; research and statistics (mesh regulation, biological and hydrographic studies); finances, etc.

Pt. 3 (p. 23-33) is Mesh regulation to increase the yield of the Georges Bank haddock fishery, by H. W. Graham.

Pt. 4, CÔTÉ, J. Statistics of landing of groundfish from the convention area, is abstracted in this Bibliography under the author's name.

Copy seen: CaMAI.

35388. INTERNATIONAL COMMISSION FOR THE NORTHWEST ATLANTIC FISHERIES. Statistical bulletin, v. 2, for the year 1952.* Halifax, N. S., the Commission, Forrest Building, 1954. 55 p. text fig., tables, fold. map in pocket. Prepared by Jacques Côté, Commission Statistician.

Contains statistics on landings of groundfish from the Convention Area by the ten member countries, with data on corresponding fishing effort expended. Pt. 1 (p. 10-25) offers long term statistics and developments; pt. 2 (p. 26-52) data for each country, according to kind of fish and fishing gear, fishing area and effort. Pt. 3 (p. 53-55) contains revisions and additions to v. 1, prepared by J. Côté, q. v.

Copy seen: CaMAI.

35389. INTERNATIONAL HYDROGRAPHIC BUREAU. Limits of oceans and seas. 3rd ed., 1953. Monte-Carlo, Imprimerie Monegasque, 1953. 38 p. 3 fold. maps. (*Its*: Special publication, no. 23)

Contains geographical boundaries approved by the International Hydrographic Conference in 1952. The information was drawn up to ensure uniformity in references to areas in the Sailing Directions and Notices to Mariners issued by various nations. Principal alterations from the second edition, 1937, are noted (p. 3). Arctic among other seas are included, and geographic coordinates given for Greenland, Norwegian, Barents, White, Kara, Laptev, East Siberian, Chukchi and Beaufort Seas, the "Northwestern Passages" (Canadian Arctic Islands waters), Baffin Bay, Davis Strait, Labrador Sea, Hudson Bay, Hudson Strait, Arctic Ocean, Lincoln Sea, Sea of Okhotsk, Bering Sea, Gulf of Alaska, coastal waters of Southeast Alaska and British Columbia.

35390. IONOVA, O. V. Ĭakuty v XVII veka. (Istorik marksist, 1939, kn. 5-6 (75-76), p. 175-91) about 20 refs. Text in Russian. *Title tr.*: The Yakuts in the 17th century.

Contains a sketch of the social and economic order among the Yakuts in the 17th century. The Russians' penetration into their country, taking possession of it, imposing high taxes in sable and cattle upon the natives, the latter's struggle and numerous revolts against the colonial oppressors during 1629-1684 are outlined; based on archival material in Moscow and Leningrad, and on the literature with frequent citation of Marx, Lenin, etc. The Yakuts of that period were chiefly occupied with cattle and horse breeding. In the northern part of the country, sable and fox hunting, also reindeer breeding was carried on, as well as fishing by the poorer people. The social structure was feudal. On important occasions (e. g. deciding upon a war), the clan chieftain or *tolon* ("prince") called a council of the "ulus people", i. e. heads of families, but the latter were mere listeners. There was a class of subordinate people, and below them, slaves (prisoners of war, orphans). Weapons and warfare are also discussed.

35391. IRVING, LAURENCE, 1895-, and **S. PANEAK**. Biological reconnaissance along the Ahlasuruk River east of Howard Pass, Brooks Range, Alaska, with notes on the avifauna. (Washington Academy of Sciences. Journal, July 1954.

v. 44, no. 7, p. 201-211, 2 text maps) 8 refs.

A description is given of the country and Eskimo routes around Howard Pass (68°14' N. 157°03' W.), "Itivlik" Lake (Eskimo name, at 68°08' N. 156°10' W.), and "Ahlasuruk" (Nigu) River, into which the lake drains. Observations were made by the authors for about three miles around the lake and eight miles northwest along the river, from June 19-July 22, 1953. Caribou, wolves, and other mammals seen are noted. Forty-six kinds of birds observed are listed with notes on numbers, habitat, etc. Sixty kinds have been listed as nesting in the Anaktuvuk Pass region 140 miles to the east. "Although some birds migrate from Alaska into Siberia, the strong westward current of American bird migration is close to its terminus at Howard Pass. The number of continental American bird species seems to decline in the western part of the Brooks Range." *Copy seen:* DGS.

35392. IRVING, LAURENCE, 1895-. Biological reconnaissance in the region of Howard Pass in the Brooks Range of Alaska. (Explorers journal, Autumn 1953. v. 31, no. 4, p. 40, 48)

Contains note on observations made June 19-July 22, 1953, in the region 68°14' N. 157°03' W. Valley of the "Ahlasuruk" (Nigu) River is described and a few of the 46 identified species of birds are listed. Old camp sites, remains of ancient dwellings, and flint fragments and instruments were also found. Author was accompanied by Simon Paneak, the elected chief officer of the council of the Nunamiut Eskimo at Anaktuvuk to the east.

35393. IRVING, LAURENCE, 1895-, and **J. KROG**. Body temperatures of arctic and subarctic birds and mammals. (Journal of applied physiology, May 1954. v. 6, no. 11, p. 667-80, 6 fig., 3 tables) 27 refs.

Contains a study of resting body temperature of 22 species of mammals and 30 species of birds. Though measurements were made at environmental temperatures ranging from 20° C. to -30° or -50° C., the individuals of the same species maintained the same body temperature within a range of ca. 2° C. The mean temperature of all mammals examined differed within a range of 2.2° C.; among the birds the difference was slightly larger. *Copy seen:* DSG.

35395. IRWIN, ORVIS CARL, 1891-, and LaB. A. WEISS. The effect of darkness on the activity of newborn infants. (Iowa. University. Studies in child welfare (in its: Studies in infant behavior I, pt. 5), new ser. no. 281, Aug. 15, 1934. v. 9, no. 4, p. 163-75, 4 tables) 4 refs.

Report of an investigation on 67 infants under ten days of age. Amount of activity was significantly different in darkness than in light, but it was not at a maximum in darkness, as expected from previous experiments. A preliminary dark period modified the effects of subsequent dim or moderate light. Body activity during darkness could not be used as criterion of dark adaptation. *Copy seen:* DSG.

35396. IRWIN, R. RANDALL. The last challenge. (Western flying, Nov. 1928. v. 4, no. 11, p. 28-29, 90-91, illus.)

35398. ISHIDA, SHIGEO. Samuso no tame ni jumoku ga wareru genshō ni tsuite. (Teion kagaku [Low temperature science], Tokyo, May, 1950. v. 5, p. 61-73, 12 fig., 2 tables) Text in Japanese. Summary in English. *Title tr.:* A study on the cracking of trees due to frost.

Conifers were found to be cracked by low temperature when they had wet wood in the internal part of the trunk. Frost-cracked broad leaf trees had numerous ice-packed crevices within the trunk. The width of frost-cracks was found to vary in proportion to the wet or ice-packed wood. *Copy seen:* DLC.

35399. ISLAVIN, VLADIMIR. Samoŭedy v domashnem i obshchestvennom bytu. St.-Peterburg, 1847. iv, 142 p. illus., 5 plates, fold. map. Text in Russian. *Title tr.:* Samoyeds in domestic and communal life.

Contains a topographic sketch of Kanin, Timan and Bolshezemel'skaya tundras, and account of their inhabitants (Samoyeds, Russians, and Zyryans), the Samoyed household, tents, clothing, and food. The economic conditions in the region are described with details on reindeer breeding (with statistics), fishing, hunting and trade relations. Samoyed morals and religious attitudes are outlined; their sanctuaries on Vaygach Island and activities of Russian missionaries are mentioned. Details are given on childbirth, marriage, folk poetry, clan organization, funeral customs and the calendar. The grave situation of the Samoyeds and their exploitation by Zyryans and Russians is stressed. The author was sent, in June 1844, by the Ministry of State Properties to investigate the economic and social situation in the Samoyed country, and he spent six months among the Samoyeds living between the Mezen River and the Ural Mts. Part of his observations appeared in 1861 as *Das Hauswesen . . . der Samojeden*, (Arctic Bibliography, No. 29808).

Contains brief survey of the development of atmospheric electricity research in polar regions. The observations of Simpson at Karasjok (Lapland) and at Cape Evans (Antarctic) showed the variation of field to be simple in both cases with a single maximum, but he found that the two maxima did not agree in regard to their local time. Inaccuracies were eliminated when the maxima at different places were referred to Greenwich Mean time (or any other universal time) and not to local time. The same result holds for the field over the sea. Recent comparisons made by Paramonoff between the universal-time period curves of field variation for continental non-polar, polar and oceanographic stations indicates good agreement. Graphs of diurnal variation of field for arctic and antarctic stations are included.

Contains a biographical sketch of these two Navy officers and a short account of the Great Northern Expedition of 1725-1743: Bering's first voyage in 1725 on the *Sv. Gavriil* into Bering Strait to find if Asia was connected with America, and its inconclusive results; the second voyage, with the *Sv. Petr* (under Bering) and *Sv. Pavel* (under Chirikov), sailing from Petropavlovsk, Kamchatka (on June 5, 1741) in search of the coast of America; the ships separating during a storm, the two explorers reached the coast of Alaska independently. Chirikov succeeded in returning to Petropavlovsk (Oct. 10, 1741), but the *Sv. Petr* went aground on Bering Island (Nov. 6, 1741) where Bering and 19 sailors died during the severe winter. By the next summer, another vessel was built and the expedition under Lt. S. Waxel, returned to Kamchatka (Aug. 27, 1742). The discoveries resulting from these voyages and their importance are discussed.

The dissemination of dugouts and plank boats in Europe and Asia is traced: a dugout made of a single trunk is used (among other peoples) by the Zyryans and Ostyaks; its coupled forms (Doppeleibäume) are known also among the Ob-Ugrians and several other Siberian peoples.

Contains a biographical sketch of these two Navy officers and a short account of the Great Northern Expedition of 1725-1743: Bering's first voyage in 1728 on the *Sv. Gavril* into Bering Strait to find if Asia was connected with America, and its inconclusive results; the second voyage, with the *Sv. Petr* (under Bering) and *Sv. Pavel* (under Chirikov), sailing from Petropavlovsk, Kamchatka (on June 5, 1741) in search of the coast of America; the ships separating during a storm, the two explorers reached the coast of Alaska independently. Chirikov succeeded in returning to Petropavlovsk (Oct. 10, 1741), but the *Sv. Petr* went aground on Bering Island (Nov. 6, 1741) where Bering and 19 sailors died during the severe winter. By the next summer, another vessel was built and the expedition under Lt. S. Waxel, returned to Kamchatka (Aug. 27, 1742). The discoveries resulting from these voyages and their importance are discussed.

Trudy, nov. seriā, t. 22) Text in Russian. **Title tr.:** Materials on the pictorial art of the Siberian peoples in the 19th and the beginning of the 20th centuries; subject drawing and other representational art on a plane surface.

A monograph based on materials in museums, archives, private collections and on the author's own field work; in preparation since 1927. Subjects drawn on hide, wood, bark, or fabric, also embroidered, and engraved upon stone, bone, wood, bark, etc., inlays, mosaic work, etc. with illustrations in actual size, are described and analyzed. Purely ornamental designs and sculptures are excluded. The folk art of following peoples is presented: Ostyaks and Voguls, Samoyeds, Yeniseians, Dolgans, Tungus and related peoples, Chukchis, Eskimos, Aleuts, Koryaks, Yukaghirs, Yakuts, and Buryats. Subjects dealing with religion, shamanism and magic are included, and the role of art in community life generally is emphasized. Material motifs and styles are analyzed. According to the subjects, the images may be divided into seven groups: animals, realistic and fantastic (mythical); man and anthropomorphic spirits; vegetation; earth, waters, mountains, routes; heavenly bodies and other natural phenomena; objects of material culture; cult objects. Man and animals are pictured in four ways: in line, contour, silhouette, and in full detail. Nine regional art types are indicated: (1) Ugrian, (2) Tungusian, (3) low Amurian, (4) Gilyak, (5) Chukchi-Eskimo, (6) Yukaghirian, (7) Yakutian, (8) Baykalian and Sayano-Altayan, and (9) the Mongolo-Manchu-Chinese. Peculiarities, evolution and affiliations of these types are discussed.

35419. IVERSEN, JOHANNES, 1904- . Origin and postglacial development of the flora of West Greenland in the light of pollen analysis. (*In:* International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 634-36)

Material for pollen analysis was gathered from borings in lakes at the head of Godthaabsfjord (64°40' N. 51°40' W.).

Five well-defined epochs in post-glacial plant development, are briefly described from the immediate postglacial period to approx. 1000 A. D. Results also indicate that distinctly arctic plants survived the last glaciation. Discussion by T. W. Böcher, A. E. Porsild, N. V. Polunin, and R. Nordhagen includes comments on dispersal of seeds by birds.

35420. IVERSEN, JOHANNES, 1904- . Origin of the flora of western Greenland in the light of pollen analysis. (Oikos, 1952-53. v. 4, no. 2, p. 85-103, illus., 2 text maps)

Contains a study of the results of pollen analysis of the vegetation after the last glacial period, in the deposits of lakes and bogs of the interior of the Godthaabs fjord region (64°20' N. 51°50' W.). Thirty-two plants are listed (table 1), followed by a discussion of the origin of the flora of western Greenland. The conclusion is: "The pollen analytical investigations so far, support the conception of Ostenfeld (1926) that the hardest part of the Greenland flora may have lived through the period of the maximum glaciation in the country itself, while, on the other hand the entire, extant, southern element of the flora has immigrated in post-glacial time, partly from the Western continent, partly from Europe."—p. 102. *Copy seen:* MH-Z.

Contains an historical review of the struggle between Finland and the U.S.S.R. since the end of the First World War, over East Karelia. Soviet Russia's increased interest in Karelia and the Kola Peninsula as an outpost against Scandinavia is stressed. The rapid industrialization of the Murman region and Karelia with the help of forced labor and deportees, and the fate of the native Finnish population in Karelia is outlined (p. 73-82). East Karelia and the Kola Peninsula should be incorporated into the Finnish state, the author concludes.

Summary in English, p. 303-310) **Title tr.:** Loess, its origin and connection with the climate of the glacial epoch.

Contains results of author's work from 1937 (during Polish Greenland Expedition) to 1949 in Greenland (recent loess) and southeastern Poland (Pleistocene loess). Includes description of the formation of fine sediments on the outwash surfaces at Arfersiorfik Fjord in West Greenland (68° 03' N. 51°-52° W.), and examples of loess formation from Alaska, Iceland, and the Alps. Climatic conditions of loess formation and climate of the glacial periods are analyzed, with conclusion that loess was formed in Europe in periglacial regions of continental type climate at the maximum of glaciation. Author agrees with the aeolian hypothesis of loess origin.

35427. JAHN, ALFRED. Zjawiska krieturbacyjne współczesnej i plejstoceńskiej strefy peryglacialnej. (Acta geologica Polonica, Jan.-June 1951. v. 2, no. 1-2, p. 159-290, 24 illus. on 12 plates, 2 maps (1 fold.), diagrs., cross-sections, 2 tables) 205 refs. Text in Polish. Summary in English, conceptus p. 75-84. **Title tr.:** Cryoturbate phenomena of the contemporary and of the Pleistocene periglacial zone.

Includes description of the present periglacial region, the area "between the limit of glaciation and the limit of the arctic forest." Climate is described. Morphological features are related to the permafrost and active layer. Processes forming the microrelief of the periglacial zone and changing the texture of the active layer are: frost action, influence of gravity on plastic masses of soil, water and wind erosion, plant activity (peat processes), and animal activity. The following forms resulting from the above processes are described: structural soil markings, fissure forms, tundra craters, bogs (earth mounds or palsen, thufur), spotted tundra, thermokarstic forms of tundra, solifluction forms. Three zones within the recent periglacial area are recognized and features characteristic of each are noted. Remainder of the paper concerns Pleistocene periglacial forms and climate in southeast Poland and neighboring U.S.S.R., and movement of the periglacial zone during the Pleistocene.

35433. JARVIK, ERIK, 1907- . Note on the Upper Devonian vertebrate fauna of East Greenland and on the age of the ichthyostegid stegocephalians. Stockholm, 1949. 8 p. (Arkiv för zoologi. Bd. 41, häfte 4, no. 13) 38 refs.

Fossil vertebrates from the Old Red Sandstone in the Kejsers Franz Josephs Fjord region of East Greenland (73°06' N. 23° W.) were collected by Danish expeditions led by L. Koch, in 1929, 1934, 1936 and 1937, and by Norwegian expeditions of 1929 and 1930. On the basis of this material, three series of strata, which succeed each other without visible disconformity, have been distinguished, probably Upper Devonian in age: Phyllolepis series, Remigolepis series, and Grönländaspis series. Data relating to the age of the Remigolepis series and of the ichthyostegids within it are briefly reviewed.

35437. JENKINS, WILLIAM LEROY, 1898- . Adaptation in isolated cold spots. (Journal of psychology, 1937. v. 49, p. 1-22, illus., tables) 25 refs.

Contains a study of six students by a method which permitted pure thermal stimulation (touch excluded) of single cold spots, surrounded by a field of controllable temperature. The course and peculiarities of adaptation of cold spots is mapped and discussed and a theory aimed to account for the phenomena is advanced.

Copy seen: DSG.

35438. JENKINS, WILLIAM LEROY, 1898- . The relation of cutaneous cold and warm. (Psychological bulletin, 1940. v. 37, p. 527)

Seriatim mapping alternately with 17° C. and 44° C. showed no evidence of any relationship between cold and warm sensitivity, and correlations between cold and warm scores for the same skin area were low and unreliable. The findings are in agreement with the author's "concentration theory."

Copy seen: DSG.

35439. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 7; further synthetic evidence against the Alrutz theory. (Journal of experimental psychology, 1938. v. 23, p. 411-16, tables) 8 refs.

Contains account of additional experiments with simultaneous warm and cold stimulation, employing tubular grills with light and heavy pressure. Negative results obtained previously with flat bar grills are confirmed. "According to the synthetic findings, cold excitation is probably not an essential element and the Alrutz theory does not apply."

Copy seen: DSG.

35440. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 8; analytic evidence against the Alrutz theory. (Journal of experimental psychology, 1938. v. 23, p. 417-22, table) 4 refs.

Three procedures were applied to check whether cold excitation is required for the common experience 'hot.' Results were all in agreement, and 'hot' was reported whether 'cold' was present or not, observations militating against the Alrutz theory.

Copy seen: DSG.

35441. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 9; the reliability of seriatim cold-mapping with untrained subjects. (Journal of experimental psychology, 1939. v. 24, p. 278-93, illus. tables) 4 refs.

Contains an account of seriatim cold-mapping upon untrained subjects, using 2 mm. and 3 mm. stimulators at 17° C. Three indications of consistency are applied and explained. It is concluded that the method "is a promising research technique."

Copy seen: DSG.

35442. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 11; effects of stimulator size in seriatim cold-mapping. (Journal of experimental psychology, 1939. v. 25, p. 302-306, tables) 5 refs.

Contains a report on seriatim cold-mapping with a range of five stimulator sizes, the smallest 1 mm. in diameter. Satisfactory reliability coefficients were obtained with all sizes; average scores indicate roughly a linear summation effect at the lowest levels, the curve flattening out with the larger sizes. The maps tend to show groupings of similar scores into hills and valleys even with the smallest stimulators, and not

a random arrangement of separate cold spots.

Copy seen: DSG.

35443. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 12; part-whole relations in seriatim cold-mapping. (Journal of experimental psychology, 1939. v. 25, p. 373-88, illus. tables) 9 refs.

Contains an account of seriatim cold-mapping of the same skin region "alternately with two stimulators, the smaller being one-half or one-third the area of the larger." The effects are mathematically evaluated and the existence of isolated "cold spots" negated, in favor of clusters. A *concentration theory* is presented according to which "sensitivity is determined primarily by the concentration of minute receptors." The applications and implications of this theory are discussed.

Copy seen: DSG.

35444. JENKINS, WILLIAM LEROY, 1898- . Studies in thermal sensitivity, 17; the topographical and functional relations of warm and cold. (Journal of experimental psychology, 1941. v. 29, p. 511-16, illus. tables) 4 refs.

Contains a comparative study of results obtained in separate alternate cold and warm stimulations, with those of a simultaneous cold and warm stimulator. The simultaneous presence of warmth had no consistent effect on the cold reports, but the presence of cold produced a "depression" in warm reports. The findings support the view of independent receptor systems for warm and cold.

35446. JENNESS, JOHN L. Oceanography and physiography of the Canadian Western Arctic. Worcester, Mass., Clark University, 1951. 304 p. 45 illus., 5 maps (1 fold.), graph, table. Typescript of unpub. Ph. D. dissertation, Clark University.

The Canadian Arctic Archipelago west of approx. 95° W. lat., including all of Cornwall, Cornwallis, and Somerset Islands but excluding Devon Island, is the subject of this study. The islands lie on a broad northern extension of the continental shelf. Navigation, tides, and currents; character and distribution of sea ice; summer ice conditions; freeze-up, break-up, and duration of ice-free period; thickness of sea ice; and accessibility of Western Arctic waters are considered in the oceanographic section of the report. The most important "destructive forces" in the islands at present are mass-wasting movements (particularly solifluction) and fluvial activity. Topography, relief, and geologic structure are dealt with, followed by a physiographic description of each island. Islands south of Viscount Melville Sound appear to have been glaciated by ice moving off the continental mainland. In the northern islands, the highest upland surfaces may have been occupied by local glaciers.

Copy seen: CaOGB (microfilm, also carbon copy of typescript, lacking two maps and many photographs).

35447. JENNEY, CHARLES PHILLIP, 1909- . The Coppermine River area, Northwest Territories, Canada. (Geological Association of Canada. Proceedings, 1954, v. 6, pt. 2, p. 11-26, 3 text maps) 16 refs.

Contains report on geology and copper ores of the 7,000 sq. mi. region between 67°-68° N. 114°-118° W. in Mackenzie District, based on information from prospecting, geologic mapping and diamond drilling in 1943-1945, and further drilling in Apr. 1952. Bedrock consists of late Precambrian sediments and volcanics resting unconformably on a basal granite. The region forms the southwest part of a large shallow basin extending east-west for 400 miles from 120° W. to Kent Peninsula. North-east-trending major tension faults have been traced across the area for as much as 50 miles. Copper mineralization, principally primary chalcocite and bornite, occurs in basalts of the Lower Coppermine series and is closely associated with the faults. No minable deposits have yet been found.

35448. JENNOV, JOHANNES GERHARDT. Moskusoksebestanden i Nordøstgrønland og nogle spredte iagttagelser og betragtninger vedrørende dyrelivet i Nordøstgrønland. København, Østgrønlandsk Fangstkompani Nanok A/S, 1945. 128 p. illus., 4 text maps, tables. 51 refs. Text in Danish. Summary in English (p. 80-84) of first part only. **Title tr.:** The musk ox population in northeast Greenland and some scattered observations and reflections on the animal life in northeast Greenland.

Investigation is made of claims that the musk oxen in the area north of Scoresby Sund are in danger of disappearing because of (1) slow multiplication, and (2) overhunting. Observations of herds made on expeditions between 1869 and 1940 show that the normal annual growth of a herd is about seven percent; therefore a group preserved from shooting will double in 10-11 years. Number of animals caught and shot is estimated, with conclusion that claims of killing are exaggerated. Northeast Greenland probably cannot support more than 60,000 musk oxen. If killing is prohibited, these and other animals may disappear through starvation. Information from notes and diaries of trappers is added (from p. 85) on numbers and habits of wildlife seen: white and blue fox, polar bear, wolves, weasels (ermine), arctic hare, lemmings, walrus, snowy owls, ptarmigan, ravens, geese, eider ducks, "salmon" (char?).

Copy seen: CaMAI; DLC.

35449. JENSEN, AAGE. Ivigtut, en arktisk mineby. (Kulturgeografi, Dec. 1954. Årg. 6, no. 36, p. 277-84, 2 illus., 4 sketch maps, cross-section) Text in Danish. Summary in English. **Title tr.:** Ivigtut, an arctic mining town.

The Ivigtut cryolite deposit of southwest Greenland (62°12' N. 48°16' W.) may be divided into a center cryolite zone, a fluorite zone with high percentage of cryolite, and an outer quartz zone with little cryolite. The deposit is overlain by granite and is mined by open-pit methods. The town of about 200 inhabitants has many modern conveniences. Total export for 1945-1949 was 160,000 tons, of which 100,000 went to Copenhagen and 60,000

to Pennsylvania Salt Mfg. Co. Resources will be exhausted by about 1970.

35452. JENSEN, J. M., and W. M. PARKINS. Brain tolerance to differential hypothermia and circulatory occlusion. (Federation proceedings, Mar. 1954. v. 13, no. 1, pt. 1, p. 75)

In dogs very low, induced brain temperatures (8° to 12° C.) were associated with gross neurological damage and with fatal cardiac arrhythmias. No such abnormalities were encountered with reductions of brain temperatures to 12°-18° C. Brain temperatures of about 20° C. with rectal temperatures of 30° C. were sufficient to protect the brain

from anoxial damage during 30 min. of complete circulatory occlusion.

Copy seen: DLC.

35453. JENSEN, OLAF. A new electric process for the carbonization of non-coking bituminous coal. (*In:* United Nations Scientific Conference on the Conservation and Utilization of Resources, *Lake Success*, N. Y., 1949. Proceedings, v. 3, *Fuel and energy resources*, pub. 1951. p. 173-75, diag.) refs.

Contains discussion of proposed beneficiation of Svalbard coals. Among estimated reserves of 8 billion tons are large deposits of high-volatile bituminous coal (analyses given) of Tertiary age, unsuitable for production of coke in ordinary coke ovens. Norway also has large quantities of unutilized water power; 200,000 to 400,000 kw. of power can be supplied annually to at least ten points on the Norwegian coast. Using this power Norsk Hydro-Elektrisk Kvaestofaktieselskab and the Norwegian Government have worked out an electrical method for the manufacture of high-quality coke from Svalbard coals. The process is described and estimated production figures given.

35455. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. In Polargegenden.

(Mutter Erde, 1899. Bd. 1, p. 261-66, 285-88, 303-308, 325-28, 364-66, 385-88, 453-56, 467-70, 481-85; Bd. 2, p. 207-210, 228-29, 245-47, 261-63, 270-73, 487-90; illus., text map) Text in German. **Title tr.:** In the polar regions.

Contains a popular presentation of observations and episodes from the author's experience traveling in the Kolyma and Verkhoyansk districts during 1895-1897 to study the native inhabitants. The natural conditions are sketched, as well as the mode of life and material culture of Yakuts, Tungus, Chukchis, and, especially, of the Yukaghirs, living on the rivers Yassachnaya and Korkodon (64°48' N. 154°10' E.) tributaries of the Kolyma. The smallpox epidemic of 1885-1886 among the Chukchis, Yukaghirs and Yakuts is described from accounts of eye witnesses; the Yakut care of lepers (three cases were seen by the writer), and burial customs are depicted with many details. Among the numerous, (altogether 76) illustrations are many of ethnographic interest. Most of these as well as the information in the text were incorporated into Joehelson's scientific papers and reports on this expedition cf. *Arctic Bibliography* No. 8145-8146, also *infra*.

Copy seen: DLC.

35456. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Die Jukagiren im äussersten Nordosten Asiens. (Geographische Gesellschaft, Bern. Jahresbericht, 1898-1899, *pub.* 1900. Bd. 17, p. 1-48, 17 illus., text map) Text in German. **Title tr.:** The Yukaghirs in the far northeast of Asia.

Lecture before the Society, Dec. 6, 1898, on the author's experiences in 1895-1896, nomadizing with Yukaghirs in the districts of Verkhoyansk and Kolymsk. The nature of the country and its inhabitants (Russian and native) generally are sketched (p. 1-12). The Yukaghirs, nomadizing in the basins of the rivers Yassachnaya and Korkodon are treated in detail: their fishing and hunting, dog- and reindeer-breeding, dwellings, food and clothing, trade, boats, transportation, epic folk poetry, famines, etc. Other nationalities living in the region: the Lamuts, Tungus, Yakuts, and Chukchis are also noted, as are occasional temperature readings. A slightly different version was published as part 5 of author's *In Polargegenden*, in *Mutter Erde*, Berlin, 1899, Bd. 2, p. 207-210, 228-29, 245-47 (in DLC).

Copy seen: DGS.

35457. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Past and present subterranean dwellings of the tribes of North Eastern Asia and North Western America. (International Congress of Americanists, 15th, Quebec, 1906. Proceedings, 1907. t. 2, p. 115-28) 15 refs.

Contains an investigation of the subterranean or semi-subterranean dwellings of the Paleo-Siberians (Ainu, Gilyaks, Kamchadals, Koryaks, Chukchis, and Yukaghirs), the Eskimos, Aleuts, and some of the North American Indians. Conclusion is drawn that the construction of Paleo-Siberian dwellings bears greater resemblance to those of the Aleuts and Eskimos, especially Alaskan Eskimos. The Paleo-Siberians in their spiritual culture stand nearer to the coast Indians, while in their material life they resemble more the Eskimos and Aleuts.

35458. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Po poljarnomu kraju; putevye nabroski. (Niva, 1898, god 29, no. 19, p. 394-96, port.; no. 30, p. 590-91, 594-95) Text in Russian. **Title tr.:** In the polar region; travel sketches.

Contains account of a Yakut "iron maiden" who was buried by a snow storm for nine days and survived, and a story of another Yakut who endured 17 days without food while lost in the tundra.

Copy seen: DLC.

35459. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Ueber die Sprache und Schrift der Jukagiren. (Geographische Gesellschaft, Bern. Jahresbericht, 1898-1899, *pub.* 1900. Bd. 17, p. 49-63, 4 illus.) Text in German. **Title tr.:** On the language and writing of the Yukaghirs.

Lecture before the Society June 29, 1899, characterizing the Yukaghir language, as learned in the author's two-year sojourn among these people in 1895-96. G. Matdel's vocabulary (*Arctic Bibliography*, No. 15460) and Fr. Müller's grammar, he found to be quite unsatisfactory and misleading. He distinguished two dialects: upper Yukaghir, spoken on the Rivers Yassachnaya, Korkodon, and Omolon; and tundra Yukaghir, spoken between the Kolyma and Alazeya Rivers. About 9,000 words and 100 texts were noted down (*Arctic Bibliography*, No. 29883). Phonetics, suffixes, agglutination, etc., are remarked upon here. The Yukaghir language is quite

different from other Ural-Altaic languages and might have some connections with those of the Chukchis, Eskimos, and American Indians, it is stated. Three specimens of "charts" and "letters" on birch bark are described and explained.

35460. JØRGENSEN, JØRGEN BALSLEV, 1923- . The Eskimo skeleton; contributions to the physical anthropology of the aboriginal Greenlanders. København, C. A. Reitzel, 1953. 154 p. 42 illus. on 18 plates, 3 text maps, graphs, 97 tables. (Meddelelser om Grønland. Bd. 146, nr. 2) 102 refs.

Contains results of examination of Eskimo skeletons from Greenland in Copenhagen University and comparisons with those of the central and western Eskimo districts. Archeological conditions in the entire Eskimo region, previous examinations of skeletons, living Greenlanders, and other Eskimos are reviewed. All parts of the skeleton are discussed in detail with data tabulated. Comparisons are made between Greenland and other Eskimo, Asiatic, and Indian crania, and pathological changes in the skeletal parts are described. In the Greenland material, two different physical types were found, corresponding to the Inugsuk and Northeast Greenland cultures. The Inugsuk type showed great concordance with Eskimos from graves in Labrador and with the old Birnirk people from Pt. Barrow, Alaska; the Northeast Greenland type with carriers of the Thule culture around Hudson Bay.

Text in German. **Title tr.:** An aerological investigation by means of radiosondes in Tromsø during the period March 31-April 30, 1939.

Contains results of 33 radiosonde ascents near Tromsø, northern Norway (69° 40' N. 18° 58' E.). An analysis of upper air winds, fronts, air masses, and the general weather situation during Apr. 1939 is given. Changes in the tropopause in relation to pressure and temperature variations, and ozone variations in relation to tropopause and temperature variations are discussed. **Copy seen:** DLC.

*Incorrectly noted as "posthumous." Other papers of this author, also known as Gans Khristian Ioganzen (b. 1897, not 1846-1920) are No. 8183, 22978-22980, 29889.

35465. JOHNSEN, H. V., and W. J. WOOD. An outbreak of poliomyelitis at Maguse River, N.W.T. (Canadian journal of public health, Jan. 1954. v. 45, no. 1, p. 16-17) ref.

Contains account of polio epidemic of October 1953 at Maguse River, a small settlement 17 miles north of Eskimo Point which in turn is 200 miles north of Churchill. History of the spread; incidence according to age, etc., are discussed.

Copy seen: DSG.

35466. JOHNSEN, PALLE. Birds and mammals of Peary Land in North Greenland, including notes from northeast Greenland. København, C. A. Reitzel, 1953. 135 p. illus., 5 text maps, 36 tables. (Meddelelser om Grønland. Bd. 128, nr. 6) 70 refs.

Contains ornithological and mammalogical results of the Dansk Pearyland-ekspedition 1947-1950. Observations were made by the author and others July-Aug. 1947, Aug. 1948-Aug. 1949, and by E. Knuth and K. Ellitsgaard-Rasmussen during winter 1949-1950. Ornithological results of summer 1947 were published by Møhl-Hansen in 1949 (Arctic Bibliography, No. 24407). Physical geography of the area is briefly outlined; 21 species of birds and 12 mammals observed at the expedition's base camp at Jørgen Brønlunds Fjord (82°10' N. 31°10' W.) and during trips overland and by water are listed. In many cases, habitat, breeding biology, distribution, migration, measurements, food, parasites, and plumage (in the case of birds) are noted. Thirty species of birds and 11 of mammals seen in East Greenland near the expedition's south base at Zackenberg Bugt (east of Wollaston Forland 74°30' N. 19°30' W.) and on Clavering Ø (74°20' N. 21° W.) are also briefly described.

35470. JOHNSON, BERTRAND LE-ROY, 1882- . The gold and copper deposits of the Port Valdez district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 140-88, fold. map, geol. sketch map)

Presents results of a field investigation by the author in 1914, of the geography,

geology, and mineral resources of the Port Valdez district in the northeastern part of the Prince William Sound region on the south coast of Alaska. The mineral resources include gold lodes, gold placers, and copper lodes. Describes the history of mining developments in the district, geographic distribution of ore deposits, vertical range of mineralization, distribution of productive mines, and geologic relations of the lode deposits. The gold placer deposits are also described. Descriptions are given of many gold-lode deposits, and the Midas copper mine.

35471. JOHNSON, BERTRAND LE-ROY, 1882- . Gold deposits of the Seward-Sunrise region, Kenai Peninsula. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 131-73, fold. map)

Describes the geography, climate, timber and vegetation, game, population and settlements, transportation, and power resources of Kenai Peninsula. The general geology discussion covers sedimentary and igneous rocks. The mineral resources of the region are considered in some detail. The general features of the mineralization are described and the gold deposits, lodes and placers are specially featured, with descriptions of the individual mines and prospects.

35472. JOHNSON, BERTRAND LE-ROY, 1882- . Mineral resources of Jack Bay district and vicinity, Prince William Sound. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 153-73, index map, fold. map)

Presents the results of the author's geologic field investigations principally in 1917, of the Jack Bay district, in the northeast corner of Prince William Sound, on the south coast of Alaska. Describes the geography, geology, and mineral resources (copper and gold ores). Discusses the general features of the ore deposits, their geographic distribution, geologic relations, and genesis. Gives suggestions to prospectors. The mines and prospects are described.

35473. JOHNSON, BERTRAND LE-ROY, 1882- . Mining in central and northern Kenai Peninsula. (*In:* U. S. Geological Survey. Mineral resources of

Alaska in 1917. Bulletin, 1919, no. 692, p. 175-76)

Describes mining operations in 1917 on the gold lode and gold placer deposits of central and northern Kenai Peninsula, on the south coast of Alaska.

Copy seen: DLC.

35474. JOHNSON, BERTRAND LE-ROY, 1882- . Mining on Prince William Sound. (*In:* U. S. Geological Survey. Mineral resources of Alaska in: 1913, in Bulletin no. 592, *pub.* 1914, p. 237-43;

1914, Bull. no. 622, 1915, p. 131-39;

1915, Bull. no. 642, 1916, p. 137-45;

1916, Bull. no. 662, 1918, p. 183-92;

1917, Bull. no. 692, 1919, p. 143-51.)

An annual review of the mining developments in the gold and copper mining districts of Prince William Sound, Alaska. Notable events in the five-year period are (Bulletin 592) the entrance of the Granby Consolidated Mining, Smelting & Power Co. Ltd. into the Prince William Sound region through the purchase of the Midas copper property on Solomon Gulch in the Port Valdez district; first shipment of copper ore from Fidalgo Bay made by the Fidalgo Mining Co.; new copper-iron sulfide, with lower copper content than chalcopryrite, later determined to be chalmersite (cubanite), discovered by the author in ore of the Threeman Mining Co. on Landlocked Bay; Gold King Mine on a nunatak in the Columbia Glacier made its first gold production. Extensive description is given (in Bulletin 622) of the Granite Mine in Port Wells; and the erection is noted of a flotation concentration plant at the Beatson-Bonanza copper mine on Latouche Island. Fold. map shows location of mineral deposits of the Prince William Sound region. The discovery of antimony-bearing (stibnite) deposits reported in Port Wells and Port Valdez districts (Bulletin 642).

35475. JOHNSON, BERTRAND LE-ROY, 1882- . Occurrence of wolframite and cassiterite in the gold placers of Deadwood Creek, Birch Creek district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909, Bulletin, 1910, no. 442, p. 246-50, map)

Describes the geologic occurrence of wolframite and cassiterite in the unconsolidated gold-bearing placer gravels of Deadwood Creek, and discusses the economic importance of the deposits.

Copy seen: DLC.

35476. JOHNSON, BERTRAND LEROY, 1882- . The Port Wells gold-lode district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914. no. 592, p. 195-236, 2 maps, incl. 1 fold.)

Presents the results of author's field investigation of the gold-lode deposits of this district ($60^{\circ}50'-61^{\circ}10'$ N. $147^{\circ}50'-148^{\circ}40'$ W.) in the northwestern part of Prince William Sound in South-central Alaska. Previous work and extent of the present investigation are given. The location, topography, climate, timber and vegetation, animal life, transportation, population and settlements are described briefly, also (in detail) the geology. The mineral resources consist of gold lodes and antimony deposits, the latter of little commercial importance. The history of prospecting and mining of the gold lodes is given; the geographic distribution and geologic relations of the gold deposits are discussed, followed (p. 218-36) by descriptions of many of the gold lodes of the district.

35477. JOHNSON, BERTRAND LEROY, 1882- . Preliminary note on the occurrence of chalmersite, CuFe_2S_3 , in the ore deposits of Prince William Sound, Alaska. (Economic geology, 1917. v. 12, p. 519-25, table) 6 refs.

Gives history of discovery and identification of chalmersite (cubanite), CuFe_2S_3 , a massive magnetic copper-bearing mineral occurring in the copper deposits of Prince William Sound, Alaska; with acknowledgments for assistance rendered by Professors Charles Palache and L. C. Graton, of Harvard University, and Drs. E. T. Allen and H. E. Merwin, of the Carnegie Geophysical Laboratory, Washington, D. C., in the identification of the mineral. Describes the physical and chemical properties of the Prince William Sound chalmersite, its geographical distribution, and its geologic occurrence and mineral associations.

35478. JOHNSON, BERTRAND LEROY, 1882- . The Valdez delta, Alaska; abstract. (Washington Academy of Sciences, Journal, 1918. v. 8, p. 410-11)

The Valdez delta is the dominant member of a group of youthful confluent deltas surrounding the head of Port Valdez, Prince William Sound, Alaska. It is an advancing, steep-fronted delta, formed by the heavily loaded aggrading

streams from the Valdez Glacier in summer dropping their loads suddenly in deep, quiet, oceanic waters. The sub-aerial portion of the delta, about ten square miles in area, one and one-fourth miles across at the foot of the Valdez glacier, at an elevation of 250 feet above tide, slopes southwestward to tidewater, four miles distant, where its lower edge is four miles in length. The maximum thickness of the delta gravels is probably a little over 300 ft. *Copy seen:* DLC.

35479. JOHNSON, CHARLES WILLIAMSON, 1863-1932. List of marine Molusca of the Atlantic Coast from Labrador to Texas. Boston, 1934. 203 p. (Boston Society of Natural History. Proceedings, v. 40, no. 1) 444 refs.

Contains a systematic list of 2,632 species and varieties, with data on distribution. Many species, native to Baffin Bay-Davis Strait and Labrador Sea, are included. *Copy seen:* DLC; MH-Z.

35480. JOHNSON, EDWARD JAMES. Pollen analysis of peat underlying a treeless heath area in the forest-tundra transition near Churchill, Manitoba. (In: Radforth, N.W. Progress report on organic terrain studies. Ottawa, 1950. National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 16, p. A 1-14, 2 plates, sketch map, 2 graphs, 3 tables) 26 refs.

M. A. thesis to McMaster University, Oct. 1949, based on author's participation in organic terrain investigations led by N. W. Radforth. The site studied ($58^{\circ}17'$ N. $94^{\circ}09'$ W. near "mile 477" on the Hudson Bay Railway 33 miles south of Churchill) and methods of sampling are described. Peat deposits were $3\frac{1}{2}$ ft. deep and consisted largely of undecomposed sphagnum peat containing larch wood at a lower depth. Two complete peat bores under areas of lichen-ericaceous heath were analyzed to obtain frequencies of pollen types at nine successive depths. A tentative interpretation of the past history of the region is presented. *Copy seen:* DGS.

35481. JOHNSON, FREDERICK ASHBY, 1903- . Preliminary report on the water-power possibilities of the Seldovia River, Alaska. Washington, D. C., Jan.

1954. 17 p. 3 illus., fold. map, 2 tables. Typescript. (U. S. Geological Survey. Reports, open file series, no. 246)

Contains appraisal of the power possibilities of the river below Seldovia Lake near the west end of Kenai Peninsula (approx. $59^{\circ}20'$ N. $151^{\circ}40'$ W.), based on a survey of river and lake in 1953. Annual precipitation (approx. 50 in.) and water supply of the drainage basin are considered. Seldovia Lake is the only site in the basin with substantial potential storage capacity. Storage requirements and undeveloped power possibilities are briefly discussed. The amount of construction needed for development seems large in relation to the probable output, and utilization of the river does not seem practical at this time. Further investigations may modify this view. More water-supply data are needed.

35482. JOHNSON, HENRY. The life and voyages of Joseph Wiggins, F.R.G.S., modern discoverer of the Kara Sea route to Siberia; based on his journal & letters. New York, E. P. Dutton, 1907. 2 p. l., ix-xxiv, 396 p., 31 plates (incl. front, ports.) fold. map.

Biography of the English sailor, Captain Joseph Wiggins, 1832-1905, who explored and established the Northern Sea Route through Kara Sea to the Ob' and Yenisey. His privately financed expedition on the *Diana* to the mouth of Ob' in 1874 proved the feasibility of sailing the Kara Sea (p. 22-53), a fact said to be known hitherto only to Norwegian fishermen and hunters. This and eleven subsequent voyages to 1896 (among them that of 1893 on the *Blenckathra*, and 1894 with the wreck of the *Stjernen*) are recounted in considerable detail. These voyages were financed, at least in part, by English or Russian commercial interests and involved shipment of English goods (machinery, rails, manufacture, tea, etc.) to Siberia and Russian goods (wheat, graphite, etc.) to England. Wiggins himself sometimes traveled from a Siberian port (Gol'-chikha, Kureyka, Yeniseysk) overland to St. Petersburg to promote the sea route by public addresses and negotiations with Russian officials and business men. His voyages were only partly successful due chiefly to defects of organization beyond his control, but regular yearly steamship service between England and Siberia was practically inaugurated when he

retired from Siberian work. His diaries are utilized in the narrative and his promotional activities appraised. Other contemporary expeditions are mentioned, as well as his encounters with other arctic explorers (Weyprecht, Norden-skiöld, Vil'ki'ski). An extensive index (p. 379-96), numerous photographs, and a fold. map of the northwestern Siberian area are included. Copy seen: DLC.

35483. JOHNSON, HUGH A. Family farm agreements for Alaska. College, Alaska, Mar. 1953. 20 p. illus. (Alaska. University. Extension Service. Bulletin 100) 12 refs.

Contains discussion of parent-children relations and partnership on farms, with the aim to further farming as a family business, to keep children from leaving their parents' land, and to prevent the turnover in full-time farms. Suggestions are made on forms of agreements, with some data on contribution of capital and division of income, expenses, etc.

Contains a brief description of areas suitable for live-stock breeding; conditions necessary for successful development in dairy and beef cattle production, including costs, returns, etc.

Copy seen: CaMAI; DA.

35485. JOHNSON, J. PETER, Jr. Information collected about the Dumbbell Bay and north Ellesmere Island regions of the Canadian Arctic Archipelago, for Geography 102, Dartmouth College. Hanover, N. H., 1952. 100 p. 28 illus., 5 maps, 134 refs.

Based on study of the literature and on the writer's observations in the Dumb Bell Bay region ($82^{\circ}30'$ N. $62^{\circ}05'$ W.) of northern Ellesmere, while participating in the establishment of the U. S.-Canadian weather station, Alert in spring and summer 1950. Background for establishment of such joint weather stations is outlined, and a brief history given of exploration of the Ellesmere region. Geology and physiography are briefly described with emphasis on polygonal soil forms seen. Notes on climate, birds, plant life and insects, etc., and

mammals are given. A list of maps and of photographs (many taken by the writer) follows the general, geological, and biogeographical bibliography.

Copy seen: CaOGB (microfilm).

35486. JOHNSON, MAYNARD STICKNEY, 1900- . Effect of continuous light on periodic spontaneous activity of white-footed mice, *Peromyscus*. (*Journal of experimental zoology*, 1939. v. 82, p. 315-28, illus.) 12 refs.

Contains account of investigations on the effects of difference in light intensity on the rate of shift of activity periods; light intensity and duration and continuity of active period; stability of the daily activity rhythm.

35487. JOHNSON, ROBERT C. Fickle Father Time. (Flying safety, Oct. 1953. v. 9, no. 10, p. 13, illus.)

Humorous account of difficulties encountered by pilots and navigators in keeping time when flying over or around the North Pole. A 24-hour time period may be covered within a few minutes by flying a tight circle around the Pole.

Copy seen: DLC.

JOHNSTON, G. H., *see* Pihlainen, J. A., and G. H. Johnston. Permafrost investigations at Aklavik 1953. 1954. No. 36762.

35488. JOHNSTON, RICHARD F. Variation in breeding season and clutch size in song sparrows of the Pacific coast. (*Condor*, Sept. 1954. v. 56, no. 5, p. 268-73, diagr.) 14 refs.

Contains the results of a study of the breeding from the standpoint of increasing latitude and elevation, based partly on material from Alaska. The most important conclusions are: "The breeding season in song sparrows is shorter and starts later in the year at higher latitude as compared with lower latitudes. The peak of breeding season is earliest at middle latitudes, intermediate at lower

latitudes, and latest at higher latitudes. Clutch size increases with increasing latitude, and decreasing longitude, over the North American continent."

35489. JOKI, AULIS JOHANNES, 1913- . Die Lehnwörter des Sajansamojedischen. Helsinki, 1952. 395 p. (Suomalais-ugrilainen seura. Toimituksia, 103) About 200 refs. Text in German. **Title tr.:** The loan words in the Sayan Samoyedic language.

A linguistic monograph, based on extensive literature and on material in Mss., collected by Kai Donner among the Ostyak-Samoyeds, and by Toivo Lehtisalo among the Yuraks. The chief task set for this study was to find out the Altaic lexical elements in the Sayan language. A geographical and historical review of the Sayan Samoyed people is given, the sources of their language are scrutinized; their neighbors and the latter's influence upon the Sayan Samoyed language are reviewed. The core of the monograph (p. 55-377) consists of a vocabulary of some thousand Sayan Samoyed loan words, with tracing of their origin and evolution. The Turcic sounds in Sayan Samoyed language are also considered (p. 379-93).

35498. JOSET, ALAIN, 1903-1951, and J. J. HOLTZSCHERER. Sondages sismiques au Groenland, 1949-1950-1951; troisième partie. Détermination des épaisseurs de l'inlandsis du Groenland. (Annales de géophysique, Oct.-Dec. 1954. t. 10, fasc. 4, p. 351-81, 9 plates, 13 tables, 6 text maps, graphs) 17 refs. Reprint issued as: Expéditions polaires françaises. Rapports scientifiques, N. III. 2. Text in French. **Title tr.:** Seismic soundings in Greenland, 1949-1950-1951; pt. 3. Determinations of the Greenland inland ice thicknesses.

Ice thickness measurements were made at Camp IV (69°38' N. 49°32' W.) during 1949, also at intervals of approximately 20 km. over a 2,000-km. route in 1950, and in 1951 a 5,300-km. route upon the Greenland icecap south of 74° N. lat. Methods and apparatus used are described. Information was secured on the physical characteristics of the ice

both on the surface and in depth, and also of the sub-glacial floor. Depths of ice at nearly 400 points were ascertained, measurements having been made by reflection shooting. Typical seismograms are shown which indicate the different characteristic waves. Results of refraction shooting were used to calculate ice thickness. A thickness of 600 m. was found at Camp IV, about 1,370 m. at Camp VI, and about 3,000 m. at the Central Station of the P.-É. Victor expedition. Outline sketches of cross sections of the inland ice are included, based on ice-thickness calculations along the different routes. Information is thus provided on the thickness of the icecap and on the structure of the rock surface beneath the ice. Using the data on ice thickness derived from the southern half and part of the north of Greenland, the volume of the inland ice was calculated at 2.7×10^6 cu. km. The mean value of the inland-ice thickness of the whole of Greenland was found to be about 1,690 m. A detailed tabulation of ice thicknesses for every station is included.

35505. JUDD, WILLIAM R. Foundation problems of the Eklutna project. New York, June 1954. 22 p. 14 illus., graphs, diagrs. (American Society of Civil Engineers. Proceedings. v. 80, no. 444)

Contains description of engineering geological problems encountered during the construction by the U. S. Bureau of

Reclamation of this hydroelectric development on the Glenn Highway, 34 miles east of Anchorage, Alaska. Ordinary geological explorations were complicated by rough terrain, extremely low temperatures, and an almost unknown geological situation. Point-bearing H-piles were selected for the powerhouse foundation. Loading and driving results, geologic sections and excavation plan are included. Conclusions are offered that: winter drilling operations are uneconomic except in emergency; detailed geologic surface mapping with petrographic identification of rock types is necessary; well-planned logistics are essential.

35507. JUMIKIS, ALFRED S. RICHARDS, 1907- . Suction force in soils upon freezing. New York, June 1954. 14 p. illus., 3 diagrs. (American Society of Civil Engineers. Proceedings. v. 80, separate no. 445) 18 refs.

Contains discussion of the suction of soil moisture upon freezing as a problem in highway and airport engineering. "In the thermo-osmotic process, inaugurated after a freezing thermal gradient is commenced, suction is considered as the driving force for the upward flow of soil moisture to the growing ice lenses. A simplified method for the calculation of the suction force is displayed. Examples

of the practical application of the suction head are mentioned. Indication is given of small scale pilot tests now in progress on measuring suction heads in soil upon freezing."—*Author's abstract*.

35508. JUVENELLE, ANDRÉ A., and others. A new method of extracorporeal circulation; deep hypothermia combined with artificial circulation. (American heart journal, May 1954. v. 47, no. 5, p. 692-736, illus., tables) Other authors: J. Lind and C. Wegelius.

Contains an account of several series of varied experiments with dogs. The technique described permitted lowering of body temperature to levels of 12° to 16° C., to replace circulation by a simple perfusion method during ventricular fibrillation exceeding three hours, to control this fibrillation through the unopened chest, and to return the animals to normal life. The method is applicable for intracardiac surgery and application to humans has started.

35511. KAASINEN, MATTI. Pallastunturi kerot ja kurut. (Terra, 1951. Ärg. 63, no. 4, p. 113-21, 4 illus.) 5 refs. Text in Finnish. Summary in English. *Title tr.:* On the "kero-tops" and "kuru-valleys" of Pallastunturi field.

"Pallastunturi field in Finnish West Lapland is the central part of the Ounas-selkä field chain and belongs to the Pallas-Ounasunturi National Park . . . The rounded field tops, "keros," and the small furrows, "kurus," between them are described and grouped. The highest top, Taivaskero, rises to a height of 821 metres above sea level and exceeds the surrounding forest area by over 500 metres. Geologically, Pallastunturi is a very worn relic mountain group in the Archaean Karelidic mountain fold. The influence of the Ice Age upon the . . . morphology is discernible. The forms of water, zones of vegetation, and cultural features are described briefly and the significance of the relief in their distribution explained . . . Finally, attention is drawn to the climate and to the daily and annual rhythm of lighting and colours."—English summary.

C., 1954. 74 p. 3 maps (1 fold.), 2 diags., 2 cross-sections, graph, 2 tables. Mimeographed. (U. S. Geological Survey. Reports, open file series, no. 268) 3 refs. *Other authors:* D. M. Hopkins and D. R. Nichols.

Contains result of mapping (by foot traverse, photo-interpretation, and air reconnaissance in summer, 1953 by a four-man U. S. Geological Survey party consisting of the authors and L. Pfalker,

in the region 62°50' N. 147° W. Two proposed highway routes were investigated, one between Paxson on the Richardson Highway and Cantwell on the Alaska Railroad, the other a possible access road to Denali. General bedrock and surficial geology are described. A detailed account of engineering geology along each segment of the routes is concerned primarily with construction problems in the unconsolidated glacial and nonglacial deposits which mantle the lowland area. Problems relating to bridge construction at the proposed river-crossing sites are briefly discussed.

Contains description of the limits and natural characteristics of the region, its climate and rivers, mountains, vegetation and animal life, with special attention to the reindeer, dogs, and fur-bearers. Natural resources, specifically minerals, sea mammals and fish are surveyed, also (no. 4, p. 146-53) the population. The life of natives as observed around 1910, is sketched; the Asiatic Eskimos (1200), their material culture, occupation, beliefs, and customs; the settled Chukchis with the same mode of life as Eskimos, relations between the two good, though intermarriage rare. Other inhabitants are noted: Koryaks around Mys Navarin (150); reindeer-breeding Lamuts (250) in the southern part of the district; Kamchadals (400) in and around Markovo village, fishers and traders who act as middle-men between Russian merchants and Chukchis. Details are given on whaling, hunting of walrus and fur-bearers (with statistics), activity of American sea hunters and traders, domestic and foreign trade of the natives, etc.

Contains a sketch of economic and social conditions among the Voguls (Mansy) and Ostyaks (Khanty) of the Ob' basin before the Revolution and under Soviet rule. The ancient tribal organization and the supposedly communistic native economy are outlined. The rivalry between the Russian merchants of Novgorod and Moscow to exploit the land of Yugra is discussed; and stress is laid upon the activities of churchmen, traders, and native princes for the economic enslavement of the common people by commercial monopoly and a system of perpetual debt. The new system of state capitalism since 1931 is praised; the reorganization of fishing and lumbering in artsels and kolchozes is described, and the benefits of this new order for the Soviet state are emphasized.

Statistics are given on production, medical help, and schools. **Copy seen:** DLC.

Contains impressions and adventures of a German woman who wanted to become acquainted with the life of the Lapps at first hand. She traveled by pulka (reindeer sledge) from Pallastunturi near the Swedish border across Finnish Lapland to Liinahamari, the harbor for Petsamo. Lapp types, their character, occupations, pastimes, progress of civilization, etc., are sketched, with author's photographs and pen drawings by Agnes Welter.

35543. KATZ, HANS RUDOLF, 1923- . Einige Bemerkungen zur Lithologie und Stratigraphie der Tillitprofile im Gebiet des Kejsers Franz Josephs Fjord, Ostgrönland. København, C. A. Reitzel, 1954. 67 p. 11 illus., text map, table. (Meddelelser om Grønland. Bd. 72, afđ. 2, nr. 4) 39 refs. Text in German. Summary in English, p. 58-61. **Title tr.:** Some observations on the lithology and stratigraphy of tillite sections in the Kejsers Franz Josephs Fjord region, East Greenland.

Important sections of the uppermost Precambrian "Tillite Series" of northeast Greenland in Strindbergs Land, Kap Weber—Gunnar Andersson Land—Dusén Fjord region, Antaretics Sund, and Ella Ø are described (result of field work

during the Danish East Greenland Expedition, 1947-1953). The series consists primarily of sandstones, shales, arkose, conglomerates, and tillitic rocks, with intermingled tuffaceous material, all resting unconformably on the older geosynclinal series of the Eleonore Bay Formation. The period between the Eleonore Bay Formation and the fossiliferous Lower Cambrian is discussed, and the following subdivisions of the oldest sedimentary series in East Greenland are suggested: Eleonore Bay Formation (oldest); Mørkebjerg Formation, Tillite Series forming the oldest of four sections; and Cambro-Ordovician limestones and dolomites (youngest). Correlations are attempted between the Precambrian of East Greenland, northern European region, and North Greenland.

35544. KATZ, HANS RUDOLF, 1923- . On the Pre-Cambrian rock-formations belonging to the Caledonian geosyncline of north-east Greenland. (*In:* International Geological Congress. 19th, Algiers 1952, *pub.* 1953. Comptes rendus, sect. 1, fasc. 1, p. 89-102, table) 16 refs.

Contains general discussion of results of investigations in East Greenland between 72° N. - 74° N. in a north-south belt through the inner part of the fjords. Sections of non-metamorphic Precambrian to Ordovician rocks were found. The Precambrian series is divided by the author into the following five groups (oldest to youngest): quartzite series; multicolored series; limestone-dolomite series; tillite series; Upper Precambrian series. Each of these is described lithologically. Conclusions are that the same sea in general covered the region from Upper Algonkian to Ordovician time while the geosynclinal trough subsided greatly. Evolution of the region in the Late Precambrian and possible correlation between East Greenland, Scandinavia, and Svalbard are considered.

Årsbok 46 (1952), no. 4) 113 refs. Text in German. Summary in English. **Title tr.:** Geological structure of the Sulitelma-Salojaure region in the north Scandinavian Caledonides.

The region described lies between 67°-68° N. 16°-17° E. in northern Sweden on the Norwegian border. Bedrock belongs to two major units, (1) the Akkajaure complex, and (2) the Large Seve Nappe, an overthrust at least 250 km. long overlying the Akkajaure complex. Each of these units may be divided into several smaller nappes. Structure, composition, and stratigraphy of the rocks in each unit are described in detail, and a brief geological history of the region is given.

3, v. 44, sect. 1, appendix B, p. 135-43)

The importance of economic development and the advancement of the present inhabitants of the Canadian Arctic (8,500 Eskimos, 6,000 Indians, 14,000 Whites) is stressed. The possibilities of agriculture, timber resources, and fisheries are considered, with the conclusion that real development will depend on mineral resources and improvement of transportation. The impact of modern civilization on the natives, and present-day medical, educational, and social problems are discussed in a general way.

35554. KELLER, FRED, Jr., and others. Aeromagnetic surveys in the Aleutian, Marshall, and Bermuda Islands. (American Geophysical Union. Transactions, Aug. 1954. v. 35, no. 4, p. 558-72, 8 text maps, profiles) 15 refs. *Other authors:* L. L. Meuschke and L. R. Alldredge.

Total-intensity aeromagnetic surveys (Project Volcano) were conducted in summer 1947 (completed 1948) by the U. S. Geological Survey, in cooperation with the Office of Naval Research, as part of its Alaskan Volcano Investigations. Program included surveys of Adak, Great Sitkin, and Umnak Islands, eight traverses over the Aleutian Trench,

and one from Adak to Kwajalein, Marshall Islands (reported by L. R. Alldredge q. v.). Summaries of these investigations are given. Results: the anomalies associated with the Aleutian volcanoes are due mainly to topographic relief and are not an indication of the degree of volcanic activity; the Aleutian Trench survey shows anomalies attributed to susceptibility contrasts but none that can be correlated with the trench; the Adak-Kwajalein traverse shows several large anomalies that may be due either to susceptibility contrasts or to uncharted seamounts. **Copy seen:** DGS.

Contains description of ten flights made during 1948 and 1949, including four between Montreal and Whitehorse, Yukon Territory, one between Montreal and Goose Bay, Labrador, and one from Fairbanks, Alaska, to Edmonton, Alberta. Quantitative air samples were taken and results correlated with definite air masses. Methods of sampling are described. Considerable variation was found in the average number of bacteria and fungi for various air masses and during different times of year. Highest fungus count was 23.6 per cu. ft. and lowest 0.01; highest

bacteria count was 5.6, and lowest 0.2 per cu. ft. Highest fungus counts were found in continental polar air during the summer, while those of bacteria were found in Pacific polar air in spring and fall. Bacteria and fungi found were all soil types.

35557. KENNEDY, WILLIAM ALEXANDER, 1915- . Growth, maturity and mortality in the relatively unexploited lake trout, *Cristivomer namaycush*, of Great Slave Lake. (Canada. Fisheries Research Board. Journal, Nov. 1954. v. 11, no. 6, p. 827-52, text map, 4 graphs, 9 tables) 11 refs.

"Ages of 9,215 lake trout were determined [during study of commercial fisheries in Great Slave Lake initiated in 1946 for the Fisheries Research Board]. Length-weight and time-maturity relationships are shown. Sex ratio is 1:1. Only half the females of mature size spawn each year. There is no growth except during June to Sept., inclusive. There is a tremendous difference in size at a given age. Growth is much faster in one half of the lake than in the other, it is the same as or slightly slower than in lakes farther south and considerably faster than in Great Bear Lake. Seven years of commercial fishing did not increase total annual mortality by much. Mortality rate increases with age among all fish of catchable size. A given year-class probably attains maximum biomass well before most of its members reach

commercial size. No significant variation in year-class strength was found."—*Author's abstract.*

35558. KENNEDY, WILLIAM ALEXANDER, 1915- . The relationship of fishing effort by gill nets to the interval between lifts. (Canada. Fisheries Research Board. Journal, Oct. 1951. v. 8, no. 4, p. 264-74, 5 graphs, 2 tables) ref.

"A description is given of the method used in analysing data from the Great Slave summer fishing [1946-1948] by which the fishing effort exerted by gill nets that are cleared every two, three, four or five days can be made comparable with the effort exerted by gill nets that are cleared daily. A comparison of catches made in 151 pairs of cases where gill nets were cleared daily and every two days under the otherwise apparently identical conditions indicated that the greater the catch per net that can be made in nets that are cleared daily, the less will be the relative increase in catch per net when they are cleared every two days. It is possible to 'saturate' nets after which they will catch no additional fish."—*Author's abstract.*

35566. KERTSELLI, S. V. Po Bol'shezemel'skoi tundri s kochevnikami. Arkhangel'sk, Gubernskaja tipografiia, 1911. 116, 5, 13 p., 22 illus. on plates, diags., fold. tables, fold. map, 111 refs. Text in Russian. *Title tr.:* In the Bol'shezemel'skaya Tundra with nomads.

Based chiefly on the writer's experience in 1908-1909, when during a twelve-month period he crossed the tundra four times traveling by foot, more than 1,000 versts, with nomadic Samoyeds and Zyryans. A veterinarian, he studied the reindeer breeding and economy of the Pechora region, collected material on reindeer diseases, and considered possibilities of colonization. A general geographic description of the Tundra and its wildlife is given; meteorological observations made in 1908-1909 are reported (p. 54-60); air and ground temperature, winds, cloudiness, general character of the weather, etc. Settlements along the Adz'va River and colonization possibilities in the tundra are discussed (p. 61-77); and (p. 77-100) the current condition of reindeer husbandry in the Arkhangel'sk Govn. presented in some detail: numbers, composition of herds, food, growth, etc. The economic life of the Pechora reindeer herders is described: their occupations, nomadic life the year round, winter and summer dwellings, etc. The situation between the Zyryans and Samoyeds at this time is outlined: the Samoyeds' honesty and rights to the tundra; the invasion of Zyryans, and the collapse of the Samoyed reindeer economy due to exploitation by Zyryans and by Pustozersk merchants. The economic importance of the reindeer industry is also studied (p. 101-109), meat production, developmental possibilities, returns, etc. Appended are varied meteorological observations for May-Sept. 1909: absolute altitudes of the Tundra; data on reindeer; route map of the expedition, etc., and a bibliography on the Bol'shezemel'skaya Tundra and reindeer breeding, compiled by A. F. Shidlovskii.

A method for lowering or raising the body temperature by introduction of cold or warm water into an intragastric, plastic bag is described. The method was employed for rabbits and also successfully applied in a case of a hyperpyrexia child of 16 months. *Copied seen:* DSG.

35573. KHARITONOV, D. E. Systematicheskii obzor zhivotnykh lesnoi zony, VI. Paukoobraznye—Arachnoidea. Pauki—Araneina. (In: Akademiā nauk SSSR. Zoologicheskii institut. Zhivotnyi mir SSSR, t. 4, Lesnā zona, 1953. p. 556-65, illus.) 15 refs. Text in Russian.

Title tr.: Systematic review of animals of the forest zone, VI. Arachnids—Arachnoidea. Spiders—Araneina.

Contains data on the systematics, biology, ecology and geographic distribution of the rich spider fauna (748 species in 175 genera and 24 families) of the forest zone of the U.S.S.R. The role of spiders in the life of forest is insufficiently known, but they destroy certain tree pests. Some species inhabit the taiga subzone and even spread to the tundra.

Study of religious and secular performances or plays, presenting some event or subject. The role of performers and their leader, the onlookers or audience, the place and time of performances,

costumes, stage and its equipment, etc., are discussed. The performance may be pantomimic, i. e. action without words, or words without action, or a combination of the two. Tales and songs are also presented at times in dramatic form. Among such, described and analyzed in this study, are the singing of Yakut epic songs (1927, no. 1, p. 73), the reindeer game of Russian Lapps (1927, no. 2, p. 283-300), Ostyak "bear festival" (1927, no. 1, p. 84-85), two magic plays of Kamehadals (1928, no. 1, p. 28-29), and the shamanistic performances of Yakuts and Yeniseians (1928, no. 1, p. 34-35).

35580. KHODUKIN, I. A. N. Tungus reki Kohengi. (Irkutsk. Universitet. Sbornik trudov, 1927. t. 13, p. 365-91, tables) Text in Russian. Summary in French, p. 391. **Title tr.:** Tungus of the Kochenga River.

Contains results of a demographic and economic survey of Tungus living in the Ilim River basin (54°-58° N. 72°-74° E.), especially the situation in the village of Yasachnaya, the former Kochengulul, situated on the Kochenga River.

(55°55' N. 104°06' E.), a right tributary of the Ilim; it was inhabited by 16 families (110 individuals) of settled Tungus. The survey, sponsored by the Irkutsk Local Committee of the North, was made by the writer in July 1926. An introductory sketch is given of natural conditions in the Ilim basin (terrain, climate, vegetation and fauna), of Russian penetration into the region since 1627 and the fate of the Tungus. The survey of Yasachnaya village includes description of Tungus dwellings, clothing (all of Russian type), data on property, occupation and income. Domestic animal husbandry, hunting and fishing, also some agriculture afford a poor subsistence. The harsh climate, great distances, and difficulties of transportation to the cultural centers are responsible for the primitive conditions of life, illiteracy, and poverty prevailing in this locality. **Copy seen:** DLC.

35581. KHONDAZHEVSKIĬ, N. K. Zimnee izshĕdovanie nagornogo berega Irtysha ot "Tobol'ska do Samarova i siĕvernykh tundr" mezhdū Obskofū gubofū i Surgutom. (Vsesoiūznoe geografiĕcheskoe obshchestvo. Zapadno-sibirskii otel. Zapiski. Omsk, 1880. Kn. 2, no. 4, p. 1-32.) Text in Russian. **Title tr.:** Winter investigation of the mountainous shore of the Irtysh from Tobol'sk to Samarovo, and of the northern tundras between Obskaya Guba and Surgut.

Following a brief account of the hilly right bank of the Irtysh, the author reports his further journey north. The settlements, population, rivers and lakes, the Ostyaks and Samoyeds of the area (approx. 61°-66° N. 73° E.), their traits, habits, family life, clothing, etc., are described, as well as the tundra, weather, etc. **Copy seen:** DLC.

35587. KIBER, Doctor. Chukchi. (Sibirskii vĕstnik, 1824. chast' 2, kn. 9-10, ėtnografiia, p. 87-126) Text in Russian, translated from a French manuscript by E. Perŕsov. **Title tr.:** The Chukchis.

Contains observations from a visit in 1822 to the trading center Ostrovnoye (220 versts from Nizhne Kolymsk) and at Guba Kolyuchinskaya. Though only a few days with Chukchis, author gives extensive notes on their material culture; tents, blubber lamp, clothing; shamanism, worship of the dead, respect for the raven and other beliefs; their family and communal life (polygamy, exchange of wives, voluntary death, slaves and chieftains, etc.); their feasts and pastimes, food, etc. The Chukchi economy is described: the settled or maritime Chukchis hunt the seal, walrus and whale, and keep dogs; the nomadic ones have large reindeer herds, do not hunt game except the polar bear, and only occasionally practice fishing. These people are keen traders, and extend their activities to Alaska. They prefer the strong Circassian (Cherkesskii) tobacco which they get from Russian merchants, to the mild Virginia of the American traders. Health conditions are good, medicaments unknown, and in a serious case a shaman makes his performance; he has no costume, but uses a drum

which is described. An extinct tribe of Shelags once living at Mys Shelagskiy and Chaunskaya Guba, is noted: they spoke the Chukchi language, though their clothing and mode of life was similar to that of Lamuts and Yukaghirs, with whom they fought continuously. The ingenuity of the Chukchis' culture is stressed and their cultural ties with the American continent are emphasized.

Text in Russian, translated from a manuscript in French; dated Nizhnekolymsk, Feb. 20, 1823. **Title tr.:** Extracts from diary notes, containing information and observations gathered on travels in the marshy wastes of northeastern Siberia.

Contains ethnographic notes on Tungus, Lamuts, and Yukaghirs from a trip in the district of Sredne Kolymsk, 1821-22. Chiefly interested in the locally common diseases, the writer, a physician, records his observations on elephantiasis among the Yakuts, eye diseases, an epidemic among dogs, health conditions generally (dampness from spring floods on the Kolyma, etc.). Vegetation and wildlife in the region of the Kolyma and Indigirka Rivers, domestic and wild reindeer, their biology, habits, usefulness to man, etc., are noted; also, and more extensively, the life, customs and economy of the native population, the Lamuts, Tungus, and Yukaghirs. Details are supplied on construction of the tents, clothing, food preparation, usefulness of the native sledges, work of men and women, their love of tobacco, whiskey and chess, songs and pastimes, the custom of *kalym* (bride price), shamanism, the annual (Dec. 6) fair at the Alazeya River, household utensils, personal belongings, implements and weapons, hunting of polar foxes, mental characteristics, etc.

Account of expedition Skijump II, organized by the Geophysics Branch, Earth Sciences Division, Office of Naval Research, to explore the Arctic Ocean in winter using aircraft. Oceanographic investigations, tests of ski-wheel combinations and other aircraft equipment, tests of temporary arctic runway facilities, ice and water characteristics and environmental training of personnel were conducted. The aircraft used consisted of two P2V Neptunes and one R4D. The R4D and one P2V departed Mar. 11, 1952 from Pt. Barrow, and landed about 400 miles north. Descriptions of landings and operations at all five stations on the ice of the Arctic Basin north of Beaufort Sea. The loss of the Navy's R4D at station 5 (83° N. lat.), the P2V flights to the U. S. Air Force installations on floating ice island T-3 and to Thule are presented.

Izvestiia, 1886. t. 17, no. 1-2, p. 1-83) Text in Russian. *Title tr.:* A trip to Nizhne-Angarsk, District of Barguzin on Lake Baykal in 1885.

A monograph chiefly dealing with fishing and the life of fishermen on the Verkhnyaya Angara River (55°42' N. 109°52' E.) and Lake Baykal. Includes a chapter "The Tungus of Nizhne-Angarsk and the fishermen's wharves" (p. 35-41). The economy of these Tungus, or Shulengi, living at the mouth of Verkhnyaya Angara, is sketched; some of them are mountain hunters, others live by fishing; their gear (nets), trade organization and profits are described in detail. Their two main landing points (fishermen's wharves) are Dogary at the mouth of the Verkhnyaya Angara, and Chichivki at the mouth of the Kichera. The Tungus fair takes place in April at the village of Dushkahan, eight versts from the mouth of the Kichera. The life of these Tungus fishermen is made wretched by alcoholism. *Copy seen:* DLC.

Poor coring characteristics of the ore necessitates the use of diamond drill with a chopping bit. Methods employed are similar to piping through overburden, but refinements have been added for speed and economy. Standard drilling equipment (with itemized list of instruments), drilling procedure, performance, maintenance of equipment, directions for lubricating, handling of sludge, and sampling and cataloging as practiced at Burnt Creek are described in some detail. **Copy seen:** DGS.

v rybakh Dal'nego Vostoka. (Vitaminnyye resursy i ikh ispol'zovanie, 1951. Sbornik 1, p. 71-138) 9 refs. Text in Russian. **Title tr.:** The vitamin A content of Far Eastern fishes.

Contains in pt. 1 of this paper (p. 71-93, 11 tables) data on the vitamin A content of Gadidae, shark (*Squalus acanthias*) and Trygonidae; pt. 2 (p. 93-112, 15 tables) deals with Salmonidae; pt. 3 (p. 113-28, 5 tables) with Pleuronectidae; and pt. 4 (p. 128-38, 6 tables) with Cottidae and some other sea fishes. Tables give the vitamin A content in the liver oil, intestine and some other parts of the investigated fishes. This study of food value and chemical composition of Far Eastern species is partly based on material from the Okhotsk and Bering Seas. The tabulated data show that the vitamin A content in the liver oil and other parts of fish body varies considerably and is dependent on various factors such as the weight of the fish, season of the catch, habitat and the species of fishes. **Copy seen:** DLC; MH-Z.

35605. KJAER, ROLF, 1897- . The Norwegian Hydrographic Office and the Magnetic Survey of Norway. (International hydrographic review, May 1954. v. 31, no. 1, p. 7-11, fold. chart)

Status of pre-World War II magnetic surveying in Scandinavia and Finland before World War II, and activities during the war are briefly described. Carried on since 1951 by the Hydrographic Office, the detailed survey of north and south Norway was almost complete, with 1,170 stations by the end of 1953. Equipment and instruments are briefly described and cooperation with the other Scandinavian countries is noted. Map shows magnetic stations and declination throughout Norway. **Copy seen:** DN-HO.

35606. KJELLANDER, ERIC. Rovstekel-notiser I. Hym., Spheciidae. (Entomologisk tidskrift, Dec. 30, 1954. Årg. 75, häfte 2-4, p. 245-48) Text in Swedish. Summary in German. **Title tr.:** Notes on hymenopters I. Hym., Spheciidae.

Contains an annotated list of 20 hymenopters; rare or new to the fauna of Sweden, among them *Passaloecus roettgeni* and *P. monilicornis* collected in Swedish Lapland. **Copy seen:** MH-Z.

35607. KLADOVSHCHIKOV, V. F. Zverovodstvo v Kondinskoy raione, Khanty-Mansiyskogo natsional'nogo ok-

ruqa. (Karakulevodstvo i zverovodstvo, July-Aug. 1954. god. 7, no. 4, p. 39-40, tables) Text in Russian. *Title tr.*: Animal farming in the Kondinsk region of the Khanty-Mansiyskiy national district.

Contains an account of the significance of animal farming in the economy of the far North; advances in fox farming since 1945 in some kolchozes and in the District as a whole; use of fish, reindeer and elk meat, etc. in the fox diet; schooling and training of personnel; vital statistics, etc.

KLANTE, W., *see* Goebel, A., and W. Klante. Sauerstoffverbrauch und Gewebstemperatur. 1953. No. 34927.

35608. KLEIN, WILLIAM H. A hemispheric study of daily pressure variability at sea level and aloft. (Journal of meteorology, Aug. 1951. v. 8, no. 5, p. 332-46, 15 text maps, 4 graphs, table) 53 refs.

Data relating to auto-correlation, interdiurnal variability, and standard deviation of atmospheric pressure are summarized and analyzed for the Northern Hemisphere. Well-defined isopleth patterns are obtained which indicate two hemispheric centers of maximum pressure variability associated with the Icelandic and Aleutian lows and a secondary center near Novaya Zemlya. In further detailed discussion of pressure variability, it is stated that the maximum interdiurnal pressure change is in Labrador, and that pressure variability is least at sea-level in low latitudes and around the 100-mb. level in high latitudes.

KLEINSCHMIDT, ERNST, 1877-, *see* Kopp, W. Fesselaufstiege von Land aus. 1935. No. 35663.

35609. KLEITMAN, NATHANIEL, 1895-, *and others.* The effect of body temperature on reaction time. (American journal of physiology, 1938. v. 121, p. 495-501, illus., tables) 7 refs. *Other authors:* S. Titelbaum and P. Feiveson.

Contains a study of possible diurnal variation in performance of simple tasks, especially in relation to body temperature. Best performance was observed in the afternoon, the poorest early in the morning and late at night. This variation depends on the diurnal temperature course of the body: a change in body temperature "is reflected in a change in the opposite direction of reaction time."

Copy seen: DSG.

35610. KLEITMAN, NATHANIEL, 1895-, *and A. I. DOKTORSKY.* Studies on the physiology of sleep, 7; the effect of the position of the body and of sleep on rectal temperature in man. (American journal of physiology, May 1933. v. 104, no. 2, p. 340-43, fig., table) 4 refs.

Assumption of a horizontal position generally leads to a drop in body temperature, which is further accentuated by the onset of sleep. Awakening is not characteristically followed by a change in body temperature. Lying down after standing invariably leads to a drop in body temperature and the opposite happens if the procedure is reversed.

Copy seen: DSG.

35611. KLEITMAN, NATHANIEL, 1895-, *and others.* Studies on the physiology of sleep, 9; motility and body temperature during sleep. (American journal of physiology, Sept. 1933. v. 105, no. 3, p. 574-84, 3 fig., table) 7 refs. *Other authors:* N. R. Cooperman and F. J. Mullin.

Synchronous recording of rectal temperature and motility showed no definite connection between temperature changes and motility during sleep. "In individual sleepers there may be a seasonal variation in the temperature level and a parallel change in motility."

Copy seen: DSG.

35612. KLEITSCH, WILLIAM PHILIP, 1912-, *and E. K. CONNORS.* Cold injury of the extremities. (Postgraduate medicine, Sept. 1954. v. 16, no. 3, p. 191-200, 14 fig., 2 port.) 11 refs.

Contains account of the etiology, physiology and pathology of frostbite and trench (immersion) foot; differences between the two; therapy of frostbite and trench foot; case histories (six cases).

Contains a description of Samoyeds in the district of Mezen' and Lapps of the Kola Peninsula in the mid-18th century, from the author's observation over many years while at Arkhangel'sk as an officer in the Russian military and civil service. His notes, interesting and evidently dependable, rectify in several instances fantastic misinformation on the Samoyeds and Lapps common in the literature of the time. Description is given of their appearance, food (Lapps mixed the inner part of pine bark with their bread flour as a protection against scurvy, p. 51-52), marriage customs and family life. The natives' relations with the Russian administration are discussed, and text given (p. 65-73) of an executive order of the tsar in 1684, regulating Samoyed taxation. Among other details given, are such on the origin of the Samoyeds' name, their religion and moral norms, psychology, occupation, preparing of food, forms of tent, nomadism, etc. A condensed English version is given in John Pinkerton, *A general collection of . . . voyages and travels*, London, 1808-1814, v. 1, p. 522-34 (copy in DLC).

35623. KNOPF, ADOLPH, 1882- . The Eagle River region. (U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 103-111)

Presents the results of field investigations in 1909 and 1910 by the author, of the gold deposits of the Eagle River region of the Juneau gold belt of Southeast Alaska, a region bounded on the southwest by the Gastineau Channel and the Lynn Canal. Describes the geography, general geology, economic geology, and development, and draws some practical conclusions. c. f. author's bulletin on this region *Arctic Bibliography*, No. 8884.

Copy seen: DLC.

35624. KNOPF, ADOLPH, 1882- . The mineral deposits of the Lost River and Brooks Mountain region, Seward Peninsula. (In: U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 268-71)

Contains descriptions of lead (galena), copper (chalcopyrite), and antimony (stibnite) deposits in the Lost River region, and the occurrences of gold, silver, lead (galena), and bismuth in the contact-metamorphic deposits of Brooks Mountain.

Copy seen: DLC.

35625. KNOPF, ADOLPH, 1882- . Mining in southeastern Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 133-43)

Discusses the developments in 1909 at the gold mines and prospects of the Juneau district, Berners Bay region, and the Sitka and Ketchikan mining districts, and at the copper mines and prospects of the Ketchikan mining district and on Prince of Wales, Gravina, and Dall Islands.

Copy seen: DLC.

35626. KNOPF, ADOLPH, 1882- . Mining in southeastern Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 94-102)

Describes the developments in the gold, copper, marble, and silver lead industries in Southeast Alaska in 1910. In contrast to the marked expansion of the gold-mining industry, the copper-mining industry held a stationary condition.

Marble deposits continued to attract attention.

Copy seen: DLC.

35627. KNOFF, ADOLPH, 1882- . The occurrence of iron ore near Haines. (In: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 144-46)

Describes low grade iron ore deposits, near Haines in Southeast Alaska, consisting of primary magnetite sparsely disseminated in a basic igneous rock composed of pyroxene and hornblende. The most favorable specimens contained only 20 percent of metallic iron, but the existence of an orebody of that grade had not been demonstrated. The ore contains a small quantity of phosphorus and titanium.

Copy seen: DLC.

35628. KNOFF, ADOLPH, 1882- . The Seward Peninsula tin deposits. (In: U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 251-67, diagrs.)

Contains preliminary results of studies of all the known tin deposits on Seward Peninsula. Special attention was given to the origin of the deposits and the commercial importance of the field. Descriptions are given of the Ear Mountain, Buck Creek, Cape Mountain, Lost River lode districts and of the Buck Creek, Grouse Creek and Fairhaven district placers. On account of inadequate developments, no safe estimate of the future commercial importance of the tin deposits is possible. The region appears to offer a limited field for cautious exploration by capital. Buck Creek placers have so far supplied the bulk of the Alaskan tin. Author's completed bulletin on the deposits is listed as *Arctic Bibliography*, No. 8886.

35630. KNUTH, EIGIL, Greve, 1903- . The paleo-Eskimo culture of northeast Greenland elucidated by three new sites. (American antiquity, Apr. 1954, v. 19, no. 4, p. 367-81, illus. incl. maps)

Contains description of three paleo-Eskimo campsites on Prinsesse Ingeborg Halvø (81°35' N. 16°35' W.) investigated by the author in summer 1952, and of the lithic and other implements found on the sites. The great similarity with earlier finds on both shores of Independence Fjord is stressed. Characteristics of this Independence culture are given and comparisons made with other paleo-Eskimo cultures both in Greenland and in North America; indications as to the age of this culture are considered, but without a conclusion at present.

Scotch pine in Muddus National Park near Gällivare and near Abisko, Swedish Lapland, has frequently borne seeds in recent years resulting in virgin growth of varying age, whereas such was non-existent in previous years. As many as five generations within the past 15 years were observed. Birch also shows ample virgin growth, but spruce shows hardly any. These developments are attributed to

the warmer climate noticeable since 1920. Observations were made on one of the Seventh International Botanical Congress excursions, summer 1950.

35646. KOJINOV, V. E. Russian water supply systems in areas where the ground is perpetually frozen. (Water works engineering, Oct. 30, 1935. v. 88, no. 22, p. 1234-37, illus., diagrs., map)

Contains remarks on frozen ground in general and that in the U.S.S.R. (where it occupies 44 percent of the total area). The special problems of water supply in permafrost regions is discussed: supply from ground waters, rivers, by melting ice; the laying of water mains in permafrost; warming of the ground by heat from the water. Construction of water-works in the frozen areas, minimizing the unequal settling of structures, etc., is dealt with. The author was formerly assistant chief engineer for design of water and sewage works in the U.S.S.R.

35648. KOLARZ, WALTER. Peoples of the Soviet Far East. London, G. Philip, 1954. ix, 193 p. illus., maps. Also pub. in New York by Praeger [1954]

Continuation of *Russia and her colonies* (No. 30122), dealing with Russian col-

onization and Soviet nationalities policy in the area (mainly) east of Lake Baykal, based on Soviet published material. The political framework and types of colonization (by convicts, the military, the Komsomol, also Russian peasants and workers) are described. There follows discussion on (among others) Alaska (p. 22-27), Kamchatka (p. 59-60), aborigines of the Soviet Far East (p. 65-101), Russians and Yakuts (p. 102-113). In these chapters, early Soviet policy of protection of the natives, and, later, that of economic exploitation of the far North, together with fostering of the class struggle among the tribes are traced. State trusts, forced labor, the reindeer problem, education and the alphabet for native groups, shamanism, Christian missions, the Lenin-Stalin cult, and Soviet propaganda on the national minorities are dealt with in turn. The Eveni (Lamuts), Koryak, and Chukotsk national districts are sketched, American influence in Chukotka, and its Sovietization in some detail. Yakut history and nationalism, the gold rush to the Aldan, expanding Russian colonization and cultural supremacy in Yakutia are outlined. Reviewed by D. B. Shimkin in *Geographical review*, July 1955. v. 45, no. 3, p. 442-43.

35649. KOLDOVSKÝ, O., and others.

The influence of rearing in the dark on the development of water metabolism in young rats. (Chekhoslovačská fiziologička, 1953. t. 2, no. 4, p. 367-72, 6 fig., 5 tables) 25 refs. Text in English. Summary in Russian. Other authors: J. Křeček, J. Krečková, and I. Mikuláš.

Rearing in the dark inhibited the ability to excrete water administered intraperitoneally. Excretory capacity is renewed after 24 hours if the animal is exposed to normal light conditions and a normal diurnal rhythm. A marked change in the ability to excrete water occurs when the animals open their eyes (14-18 days).

The heavy storm in the North Sea in Jan.-Feb. 1953, which resulted in the disastrous inundations on the English and Netherlands coasts, is explained by an unusually strong flow of cold arctic air meeting the warm air from the Atlantic over the North Sea. The phenomenon has probably some relation to the uncommonly high number of sun spots, as the eleven-year and hundred-year maxima coincided in 1947-48.

Copy seen: DLC.

35652. KOLOBKOV, N. V. Pochemu byla kholodnaia zima? (Ogoněk, May 1954, no. 20, p. 9, illus., map). Text in Russian. **Title tr.:** Why was the winter cold?

The uncommonly cold winter, belated spring and stormy weather in Europe in 1953-54 is explained by an unusually strong and uninterrupted flow of arctic cold air masses which barred the Atlantic warm cyclonic air from access to Europe. These climatic anomalies were probably a consequence of the exceptionally high maximum of sun spots in 1948 (coincidence of eleven- and hundred-year periods). Map shows prevailing direction of air circulation in Europe and Arctic Basin, Jan.-Mar. 1954.

Continuation of a basic reference work in process of publication since 1934 by the Botanical Institute of the Academy of Sciences U.S.S.R., under direction of the chief editor, V. L. Komarov till 1945 and subsequently B. K. Shishkin. This comprehensive flora includes many arctic species.

Vols. 1-19 were noted without details as *Arctic Bibliography*, No. 9058 and 30132. The scope of the 21 volumes which have appeared to date (1954) as summarized by Shishkin in his *Printsipy postroeniia "Flory SSSR,"* q. v., is:

v. 1. Pteridophyta - Gymnospermae - Monocotyledones (Pandanales-Helobiae), pub. 1934. xxvi, 302 p.

2. Fam. Gramineae. 1934. xxxiii, 776 p.

3. Fam. Cyperaceae - Juncaceae. 1935. xxv, 636 p.

4. Fam. Liliaceae - Orchidaceae. 1935. xxv, 758 p.

5. Fam. Suaruraceae - Polygonaceae. 1936. xxxvi, 759 p.

6. Fam. Chenopodiaceae - Caryophyllaceae. 1936. xxxvi, 954 p.

7. Ord. Ranales and Rhoeadales (fam. Papaveraceae). 1937. xxvi, 790 p.

8. Ord. Rhoeadales (fam. Capparidaceae, Cruciferae, Resedaceae). 1939. xxx, 692 p.

9. Fam. Droseraceae - Rosaceae (subfam. Spiraeoideae and Pomoideae). 1939. xix, 529 p.

10. Fam. Rosaceae (subfam. Rosoideae and Prunoideae). 1941. xx, 673 p.

11. Fam. Leguminosae (subfam. Mimosoideae, Caesalpinioideae and Papilionatae). 1945. xvii, 432 p.

12. Fam. Leguminosae (Genus *Astragalus*). 1946. xxviii, 918 p.

13. Fam. Leguminosae (subfam. Papilionatae [end]). 1948. xxiv, 588 p.

14. Fam. Geraniaceae - Vitaceae. 1948. xxiv, 790 p.

15. Fam. Tiliaceae - Cynomoriaceae. 1949. xxiii, 742 p.

16. Fam. Araliaceae - Umbelliferae. 1950. xxvi, 648 p.

17. Fam. Umbelliferae - Cornaceae. 1951. xix, 390 p.
 18. Fam. Pyrolaceae - Asclepiadaceae. 1952. xxix, 802 p.
 19. Fam. Convolvulaceae - Verbenaceae. 1953. xxiv, 752 p.
 20. Fam. Labiatae. 1954. xvii, 555 p.
 21. Fam. Labiatae [concluded]. 1954. xxi, 703 p. **Set seen:** DLC; MH-A.

35656. KON, FELIKS ĀKOVLEVICH, 1864-1941. Fiziologicheskii i biologicheskii dannii o Ākutakh; antropologicheskii ocherk. Minusinsk, Tipografiia V. I. Kornakov, 1899. 89 p. tables part fold. (Byloe i nastoiashchee Sibirskikh inorodtsev. Materialy dlia ikh izucheniia, vyp. 1) about 30 refs. Text in Russian. **Title tr.:** Physiological and biological data on the Yakuts; an anthropological sketch.

Contains results of a survey done in 1894-96 on about 140 Yakuts (both sexes) of the Namsk ulus about 100 versts from Yakutsk. Observations and measurements were made on height, chest circumference, body temperature, pulse, breathing, lifting power of arms; on period of sex functions among the men and women, pregnancy, fecundity, courting and wedding customs (with some folklore), results of endogamic marriage, age of mates, number and sex of children, and vital statistics gathered on the male and female population. The more common diseases are reviewed: nervous disturbances and the role of shamans, venereal diseases, leprosy, smallpox, measles and consumption. The data collected are presented in mean measurements and percentages critically evaluated, and compared with results and opinions of other investigators. F. Ā. Kon, who is not otherwise identified, was inspired to do this work by I. I. Ma'nov, anthropologist of the Sibirskov Yakut expedition of the Russian Geographical Society. **Copy seen:** CtY.

(Arctic Bibliography, No. 135).

"Laboratory tests were conducted to determine the relationship between the density and thermal conductivity of snow. Snow of known densities was placed in 30 x 30 x 50 cm. open-top wooden boxes with metal bases immersed in a NaCl solution at -1° C. The air temperature surrounding the box was kept constant at -12° C. Thermocouples were placed at various depths, approximately 10 cm. apart. The initial temperature of the snow was recorded and new recordings were plotted every 30 min. The results indicated that the ratio of the coefficient of thermal conductivity to the square of the density was 0.0068 for smaller densities and 0.0085 for larger densities."—SIPRE.

35660. KONSTANTINOV, G. M. K materialam po izucheniiu Angarskogo neolita. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia 1928. t. 54, p. 83-94) 22 refs. Text in Russian. *Title tr.:* Contribution to the study of the Angara neolithic.

Contains description of archeological excavations made by the writer in 1928 in three places on the Angara River; the most interesting discoveries were made at the village of Rasputino, 450 km. below Irkutsk, near the confluence of the Igirma and Angara, where five sites and a burial place were discovered. The finds consisted of lamellar flakes, nucleus, burins, arrow points, a nephrite axe, bone awls, ornamented potsherds, bones of reindeer and other animals, also human remains. The form of burial is described and anthropometric data given on the bone material; the bones were covered with red paint (ocher); the skull was dolichocephalic. According to the traditions, Tungus hunters lived in this region before the coming of the Russians.

Copy seen: DLC.

35661. KONSTANTINOV, M. Pushnoi promysel i pushnafa trgovlia v Iakutskom krae. Irkutsk, Gos. izd-vo, 1921. 95 p., tables, fold. map. Text in Russian. *Title tr.:* Hunting and the fur trade in the Province of Yakutia.

A survey based on published material and on the author's observations while working as clerk and bookkeeper in two of the largest fur trade concerns. He describes the occurrence and distribution of the principal fur-bearers: arctic fox, squirrel, ermine, fox, sable, reindeer, marten, Siberian pole, bear, otter, beaver, and wolverine. The hunters, their organization and hunting methods are dealt with, also selling, buying and barter systems; winter and summer fur fairs at Yakutsk, with data on yield and turnover of pelts; prices for skins and those of firearms and other goods required by hunters, with data for the period 1857-1916. Outline is given of the new Soviet organization of the fur trade since 1919 based on state monopoly; its impact on the economy of the province and future prospects are discussed. Index of names, p. 93-94.

35665. KOPYLOV, I. P. Tungusskoe khoziaistvo Leno-Kirenskogo kraia po dannym statistiko-ekonomicheskogo issledovaniia 1927 goda. Pod red. D. V. Dobrogo, N. Ia. Novombergskogo, N. S. Iursovskogo. Novosibirsk, 1928. 58 p. tables, fold. map. (Rafonnoe pereglednoe upravlenie Sibiri. Seria B. Issledovaniia kolonizatsionnykh fondov.

vyp. 3) Text in Russian. **Title tr.:** Tungus economy in the Lena-Kirensk region from data of the statistical-economic investigation of 1927. Editors: D. V. Dobryi, N. I. Novombergskii, N. S. Iur'sovskii.

Contains critical evaluation of data collected by the writer on a trip in Feb.-Apr. 1927, to the region between 53°45'-55° N. 105°35'-108°35' E. Seven Tungus settlements with 63 families (242 individuals) and six Russian villages were surveyed. Details are given on Tungus topography (their number in this region had decreased 46 percent since 1897), material culture (dwellings, clothing and food, mostly of Russian type) and economic condition. Four forms of Tungus economy are described: two half-sedentary based on hunting and cattle breeding, one of them also with reindeer, and two sedentary forms also based on hunting and cattle breeding, one of these also with agriculture. Horses and cows are the chief domestic animals; about half of all the families keep reindeer; agriculture, practiced since 1919, was still limited (in 1927) to but four homesteads in one settlement. Use of pastures, meadows and hunting grounds, also commerce, communication, and possibilities of colonization are outlined. The economy of Russian settlers is similarly but more briefly surveyed (p. 46-57). Plans for colonizing the Tungus country and the activities of the Irkutsk section of the Pereselencheskoe Upravlenie (Resettlement Administration) are outlined in an introduction (p. 3-13), signed by the editorial board. **Copy seen:** DLC.

A discussion, by the Vice-Minister of Fisheries of Karelo-Finnish SSR, on conditions in the fresh-water and deep-sea (White, Barents, North Atlantic) fisheries. The increase in the average annual catch by a fisherman from 22.1 cwt. in 1947 to 31.2 cwt. in 1952 is noted; also the general increase in the Barents Sea and North Atlantic catch and the lag in that of the White Sea; the last is explained by lack of plan, five years' closed season on the Kandalaksha Bay herring due to its depletion, and by certain defects of organization. The investigation of fish resources by various local institutions are mentioned, and various means suggested for improving methods of catch.

B., no. 21) 122 refs. Text in Polish. *Title tr.:* Frequency of snow cover in the Province of Silesia. (Wrocław Society of Sciences and Letters, Publications ser. B., no. 21)

A systematic survey of the many ramifications and problems relating to snow cover and to its investigation in various portions of the Northern Hemisphere (p. 5-44) precedes the author's study of the distribution of snow cover in Silesia Province, Poland. It is emphasized that only in relatively recent years have investigators given serious attention to snow cover as an important climatic element as well as a climatogenic (climate generating) factor under certain topographic conditions.

A snow cover's role in the national economy, viz., its influence on communications, transportation, hydrology (water supply), agriculture, and bio-climatic conditions, etc., has been realized and investigated for a much longer time in the U.S.S.R., Finland, Sweden and Canada and certain mountainous countries of Central Europe. Largely, from the literature of these countries, the author reviews present knowledge and physical laws governing the radiational and thermal properties of a snow cover, of the air layer immediately above it, and of the substratum or earth's surface below it.

The present heterogeneity and deficiencies in the observational data are deprecated as precluding comparative

studies of snow cover between individual countries and the mapping of snow cover distribution (depth and duration) on a large scale over the Northern Hemisphere; this situation can be corrected only by international meteorological and hydrological congresses which should adopt as soon as possible resolutions (a) standardizing observational procedures with more detailed definitions and codings of various snow cover states; and (b) increasing the number of observations daily from the single one at 0700 AM to three or four, for a better representation of its diurnal course.

From his experience in Greenland, the writer makes the interesting incidental observation that "snow from cosmic dust niches is an excellent source of potable water."

Summary in English. *Title tr.:* Geographical conditions, state and development of navigation to Greenland.

A general outline of navigation in Greenland waters: the unfavorable conditions caused by the harsh, stormy climate, dangerous currents, ice masses from the Arctic Basin (storis), from Baffin Bay (westis) and of local origin (winteris); difficulties of navigation in fiords, peculiar features of the tides. The present-day (1935) navigation to Greenland as controlled by Grønland Styrelse (Greenland Administration) is characterized (p. 210-13), its specially equipped vessels, concern for natives, restriction upon foreign ingress, etc. The history of voyages to Greenland, from Vikings' to Lauge Koch's flights, is summarized. *Map* (p. 190) shows currents and drift of ice around Greenland.

35680. KOSIBA, ALEKSANDER. Grenlandia. Lwów-Warszawa, Książnica-Atlas, [1937]. vii, 479 p. ports., illus. diags., tables, maps (1 fold.) 285 refs. Text in Polish. *Title tr.:* Greenland.

A monographic study of Greenland by the Polish geographer and glaciologist, based on comprehensive literature and on author's observations during work with the Danish Geodetic Institute Expedition to West Greenland in 1934.

In 8 sections, each dealing with all parts of Greenland:

1. *Accessibility* (p. 1-39), outline of ice conditions in Greenland waters: pack ice from the Arctic Basin (*storis*), from Baffin Bay (*vestis*), and local winter ice; navigation hazards and experiences of expeditions in various parts of Greenland waters; landing difficulties encountered by the Danish expedition in 1934.

2. *History of expeditions* (p. 40-91), from the Vikings' voyages to the French expedition in summer 1936, with notes on the Danish Geodetic Institute expedition in 1934: its landing in the vicinity of Holsteinsborg, its geodetic and cartographic work between Sønder Strømfjord and Upernavik (66-73° N.).

3. *Climate* (p. 92-134): solar radiation and air temperature; atmospheric pressure and wind; humidity and precipitation: the lower line of permanent snow (p. 116-18); cloudiness and fog; climatic change, influence of climate on man; arctic day, night and twilight; fata morgana, magnetic disturbances, auroras.

4. *Inland ice* (p. 134-210): its extent, 1,833,900 sq. km. of Greenland's total area of 2,175,600 sq. km., its edges, main glaciers, surface, crevasses, surface pools in summer; hypsometry, average height, bed, thickness and physical features; movement of glaciers, ice caverns, ice temperature at various depths; paleogeographic changes in extent and origin.

5. *Geology and geomorphology* (p. 211-64), a sketch of the stratigraphy and tectonics, main minerals; geomorphology of the surrounding submarine shelf and ice-free coasts; variety of landscapes; tundras, lakes, weathering and erosion phenomena.

6. *Flora* (p. 265-93). The vegetation, possible only in coastal areas, and even there affected by low temperature, short summer, solifluction and wind, is summarized: 390 species of higher plants, 600 mosses, 300 lichens, 185 marine algae, 375 fresh-water algae and 600 species of plankton are known; experiments in vegetable growing continues, though with limited success.

7. *Fauna* (p. 294-346). Survey is given of land and marine animals, their occurrence, distribution, migration and economic importance: reindeer, musk ox, wolf, arctic fox, lemming, ermine, hare; birds (rock ptarmigan, snowy owl, goose, sea eagle); fresh-water and marine fishes; insects; sea mammals (polar bear, p.

309-317, seal, walrus, whale, narwhal, dolphin, humpback, cashalot).

8. *Eskimos* (p. 347-447) are treated in detail: their origin, migration routes, distribution and population density (average, 0.36/km. of coast), anthropological characteristics, division of culture (high arctic, arctic, and sub-arctic); tools, hunting and fishing implements, transportation, kayaks and umiaks (with tabular data on their number by regions, p. 381-82), dog sledges, hunting methods (with data on seal catch in 1920-24), dwellings, clothing, social organization, language and literature, system of computation, religion, acculturation.

Appended is a list of the main Eskimo geographic names; bibliography (285 items), and index of names. The 204 illustrations, mostly from the author's photographs, include 51 on the Eskimos and their life. *Fold. map* 1:8,000,000, shows hypsometry of the inland ice and routes of the principal Greenland expeditions.

geograficzne, 1935. t. 13, no. 1, p. 19-36, 17 illus., map) Text in Polish. Summary in English. **Title tr.:** The Greenland Expedition of the Danish Geodetic Institute.

The author, Polish geographer and glaciologist, participated as a geodesist in the Danish Geodetic Institute expedition to West Greenland 1934, Capt. O. C. Jørgensen, leader. The expedition left Denmark in April on the steamer *Hans Egede*, landed near Holsteinsborg, worked in two (geodetic and cartographic) parties and surveyed the region from Søndre Strømfjord to Upernavik (66°-73° N.). Preparations, difficult conditions due to unfavorable weather, spoiled food, etc., are briefly described. The author's own observations, glaciological, geomorphological, oceanological and ethnographic, are mentioned, also the fact that he took more than 700 photographs.

Text in Polish. Summary in English. **Title tr.:** Trans-Greenland expeditions and the surface relief of the inland-ice.

Survey of expeditions to and traverses of the inland ice (by Nordenskiöld, Jensen, Peary, Nansen, Drygalski, Knud Rasmussen, de Quervain, I. P. Koch, Lauge Koch, Wegener) is followed by a general outline of the coastal and interior hypsometric features of the 1,833,900 sq. km. surface of the ice cover, with its 3,300 m. peak at 67°10' N. 36°25' W. According to the author's estimates, 22.04 percent of the total surface lies below 1,500 m.; 16.84 percent, between 1,500-2,000 m.; 26.85 percent, 2,000-2,500 m.; 25.68 percent, 2,500-3,000 m.; and 8.59 percent above 3,000 m., with an average height of 2,100 m. **Copy seen:** DLC.

Monograph on natural conditions, population and economy at that time. The writer traveling from Yakutsk to Verkhoyansk was impressed by the poverty of Yakuts, and while living for some years in Verkhoyansk, he carried out a thorough investigation. The Yakuts of the district are cattle and horse breeders; the Tungus, called Lamuts, keep reindeer and do hunting. The Yakuts of the Yana River basin consist of 13 clans (*naslegs*), each with a "great prince" elected for three years; his functions, yearly meetings of all the "princes" at Verkhoyansk, the customary laws and the administrative organization generally is outlined. The system of taxes, support, also function of church, school, and hospital for syphilis are described. The writer divides the Yakut population into five economic classes, and characterizes each separately: as to food, clothing, dwellings, household equipment, etc. Trade, prices, family income are discussed. Famine conditions are constant: Yakuts starve half the year, Lamuts the whole year round, is the popular saying. Their cattle are limited in number by lack of hay; but introduction of fishing on a large scale might

improve their standard of living, the writer suggests. The Tungus (Lamuts) are treated briefly (p. 35-38); they are considered a "lower race" by the Yakuts who exploit them mercilessly. All the Lamuts speak Yakut, but not vice versa. The Yakuts are themselves exploited by Russians, chiefly with the help of vodka and the Yakut passion of card gambling.

This article was reprinted with minor changes in text, as the item following.

Copy seen: DLC.

35694. KOVĀZIN, N. M. Kul'turnyi rasfsvet narodov Sovetskogo Severa. (Vsesoūznoe geograficheskoe obshchestvo. Izvestiā, Mar.-Apr. 1954. v. 86, no. 2, p. 136-48) 9 refs. Text in Russian. **Title tr.:** Cultural growth of the peoples of the Soviet North.

Contains an uncritical appraisal of the Soviet achievements in the acculturation and progress of the northern peoples of the U.S.S.R. In the pre-revolutionary period, Russian influence had two aspects, one progressive, from its higher culture and advanced technique, the other destructive from the impact of the tsarist régime and exploitation by the ruling classes. The Soviet aim to raise the culture and economic conditions of

the northern peoples has manifested itself in various ways, author states: organization of national districts; gradual collectivization of work, trade and crafts, and the development of industry; organization of 19 cultural bases (kul'tbaza), among them Sos'vinskaya, Kazym'skaya, Turinskaya, Olenek'skaya, Chukotskaya, Koryak'skaya; introduction of writing and creation of literature in 13 native languages; organization of a net of national schools (620 in 1950 as compared with 40 in 1917); organization of clubs and of scientific research institutes. The general line of development is illustrated by the examples of Khanty-Mansiysk, Yamal-Nenetsk and Taymyr National Districts (p. 144-45) and Yakut A.S.S.R. (p. 145-47). Finally the tasks of further advance are stressed, but briefly. Author's paper on this topic was read at the meeting of the Ethnographic Branch of the Geographical Society Feb. 18, 1953, and its material was used in his article published in Vestnik Leningradskogo Universiteta, 1952, no. 11.

Text in Russian. **Title tr.:** Results of measuring with new instruments the humidity of air at low temperature.

The ordinary hair hygrometer is not reliable at low temperature, and the Arctic Institute U.S.S.R. had Prof. M. I. Gol'fman construct a new instrument for determination of humidity under arctic conditions. The apparatus, based on the principle of the absorption of moisture humidity from a certain amount of air by a drying substance which is weighed, was tested in Irkutsk in Feb.-Mar. 1938 and at the polar station on Dikson Island in Oct. 1938-May 1939, the author participating in both tests. The values obtained by the new apparatus were checked by measurements with a hair hygrometer and with a thermopsychrometer similar to the instrument used by F. Malmgren during the *Maud* expedition. From comparison of the results, it appears that the Gol'fman apparatus cannot distinguish im-

purities of the air from humidity, and may not be recommended for general use in polar stations.

35701. KRANCK, ERNST HÅKAN, 1898- . Interpretation of gneiss structures with special reference to Baffin Island. (Geological Association of Canada. Proceedings, 1953. v. 6, pt. 1, p. 59-68, 9 illus.) 13 refs.

Structures in the Clyde region of Baffin Island (70°20' N. 68°20' W.) were studied during the 1950 expedition of the Arctic Institute of North America. Dominant rock type is a migmatitic gneiss whose structure is discussed in detail. The "characteristic tectonic

style" of this region is common in ultrametamorphic rocks formed under similar conditions in other areas. Structures in East and South Greenland, the Hope-dale gneisses of Labrador, and gneisses on the east coast of James Bay are mentioned as showing similarities but are not discussed. **Copy seen:** DGS.

35702. KRANCK, ERNST HÅKAN, 1898- . Mineral possibilities of Baffin Island. (Canadian mining and metallurgical bulletin, Oct. 1951. v. 44, no. 474, p. 682-83) Also pub. in: Canadian Institute of Mining and Metallurgy. Transactions, 1951. v. 54, p. 438-39.

Geological observations were made by the author and others during the 1950 Baffin Island Expedition of the Arctic Institute of North America. Gneisses of the eastern seaboard zone and western inland zone of the Clyde region are described. They cannot definitely be correlated with the Grenville-type gneisses of southern Baffin Island or with any mainland formation. The southernmost part of the formation (Clyde Series) may contain some iron and sulfide ores. High fluorine content in the pegmatites indicates possible occurrence of fluorine minerals such as cryolite. Extensive marble deposits in the inland zone may some day be of commercial interest. **Copy seen:** DGS.

Text in Russian. **Title tr.:** On a Soviet ship in the Arctic Ocean; The Hydrographic Expedition to Vrangeli Island.

Contains popular notes on the Arctic Ocean, Chukotsk Peninsula and Vrangeli Island, with data on physical geography and resources. The discovery of the

island, and Russian, English and Canadian claims to it are reviewed. The Hydrographic Expedition of the Far East from Vladivostok in July 1924, on the ice-breaker *Krasnyiŭ Oktâbr'* under command of B. V. Davydov is outlined. The expedition reached Vrangl on Aug. 19, removed four Canadians from the island, raised the Soviet flag and returned to Vladivostok on Oct. 29, 1924. **Copy seen:** MH.

Contains notes on Devonian deposits which were described for the first time by K. Bogdanovich from the Okhotsk Sea coast in 1896. Similar deposits were discovered by the author on the Shantar Islands and adjacent parts of the mainland. These deposits are briefly described and typical species of brachiopods and other fossil molluscs noted and discussed. The age of deposits is determined as middle Devonian.

Heft 3-4, p. 133-300, 612 text illus., plates 3-18) Also issued separately, Berlin 1904 (xii, 168 p. 16 plates), with detailed contents table and subject index. Copy in DLC. Text in German. *Title tr.:* Prehistoric fishing implements and their new equivalents; a comparative study as a contribution to the history of the fishing industry.

Based chiefly on collections of the Museum für Völkerkunde in Berlin, and on the literature, this study is introduced by an account of the primitive forms of rafts, canoes and boats used for fishing. Various forms of fishing technique and the implements used are presented: fishing with the bare hands, use of clubs and nooses, development of spears and harpoons, use of fishing-hooks, bow and arrows, nets and fish-weirs, poisoning the fish, ice-fishing, etc. The preparation of fish for food (cooking, drying, smoking, etc.) is also investigated. Primitive peoples and Europeans, recent and prehistoric are considered, with occasional references to the Eskimos, Aleuts, Northwest Coast Indians (p. 164-71, 192), Yeniseians (p. 176), Chukchis (p. 186, 198), Ostyaks (p. 246), Golds (p. 247, 251), and others. *Copy seen:* DLC.

35709. KRAUSKOPF, KONRAD BATES, 1910- Igneous and metamorphic rocks of the Oksfjord area, Vest-Finnmark. (Norway. Norges geologiske undersøkelse, 1954. Nr. 188, Årbok 1953, p. 29-50, 2 maps (1 fold.)) 7 refs.

Principal rock in the Oksfjord region (northwest coast of Norway, 70°12' N. 22°18' E.) is a gabbro gneiss showing conspicuous layering in the field, but in hand specimens indistinguishable from ordinary intrusive gabbro. Layers of syenite, anorthosite, and pyroxenite are interbedded with the gabbro gneiss. Small bodies of massive gabbro, syenite, peridotite, hornblende, and anorthosite may be intrusive into the layered rocks. Each of the rock types and the structural features of the region are described.

Major problems in the bedrock geology are the origin of the layered rocks and the relation to them of the bodies of massive rock. *Copy seen:* DGS.

35710. KRAUSKOPF, KONRAD BATES, 1910- Layered gabbro and related rocks in northern Norway. (*Geological Society of America. Bulletin*, Dec. 1954. v. 65, no. 12, pt. 2, p. 1344)

Describes layered gabbro and related rocks, underlying islands and mainland near Hammerfest, Norway, intruded by small masses of basic intrusive rocks. Suggests that the gabbro may be the result of extreme metamorphism of a dominantly volcanic sequence. *Copy seen:* DLC.

35720. KRICKENBERG, C. F. Transporting equipment in the Arctic (U. S. Navy. Civil Engineer Corps bulletin, Sept., Oct. 1954. v. 8, no. 9, p. 11-15; no. 10, p. 18-21, illus.)

"This article [is] condensed from a paper submitted in the 1952 Chief's Award Competition . . . editorial changes throughout bring the story up to date."

Dog, mechanical surface and air transportation in the Arctic are discussed. Included are descriptions of the "Bombadier," "Weasel," "LVT," and various sleds. Tractor train freight-ing operations, winterizing of tractors, trail blazing and marking, and the construction of ice bridges are discussed. The use of radio direction finders, gyrosyn compass, and odometers is suggested for navigation purposes. A compilation of oils and fuels used in the Naval Petroleum Reserve No. 4, Northern Alaska, which have proven satisfactory under most continual operating conditions, and an arctic transportation feasibility chart for the Pt. Barrow area are included. It was determined that freight can be transported at between 20 cents and 50 cents per ton-mile by tractor train and from 50 cents to one dollar per ton-mile by aircraft. *Copy seen:* DLC.

35721. KRIEGER, ANDREW E., Jr. Air Force research and development in Alaska. (Air University quarterly review, Summer 1954. v. 7, no. 2, p. 90-100, illus.)

Review of the research and development carried out by the 5064th Cold Weather Materiel Testing Squadron and the Arctic Aeromedical Laboratory at Ladd Air Force Base, Fairbanks, Alaska. The mission of the squadron is "to monitor all arctic tests of aircraft, materiel, and equipment used or proposed for use by the Air Force which are conducted in Alaska and adjacent areas, and to furnish test facilities, administrative services, and test support aircraft and equipment to test units from Air Force commands conducting tests in the Alaskan area." The Arctic Aeromedical Laboratory concerns itself with the effect of cold and the arctic environment generally upon man; physiological and psychological problems of survival, are studied with "major emphasis on basic mechanisms affecting heat balance in human beings subjected to cold." *Copy seen:* DLC.

35722. KRINSLEY, DANIEL BERNARD, 1923- . Glacio-marine chronology in the Thule area, Greenland. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 383)

Contains abstract of paper presented at the 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. "Radiocarbon analyses of samples collected in the Thule area of northwest Greenland [76°34' N. 68°48' W.] make it possible to (1) date a glaciation in that area, and (2) place a maximum date on the development of raised marine terraces and on the disappearance of the glacier that occupied Wolstenholme Fjord north of Thule. A marine till was deposited more than 32,000 years ago (two radiocarbon dates) at Saunders Island ten miles west of Thule. This till was covered by beach deposits 8500 years ago (two radiocarbon dates) that were subsequently cut by younger marine terraces which are now as much as 130 ft. above sea level. Wolstenholme Fjord, Thule, and the mouths of several of the valleys south of Thule had been cleared of ice by the time of the construction of the 75-ft. marine terrace."

35726. KROG, JOHN. The influence of seasonal environmental changes upon the metabolism, lethal temperature and rate of heart beat of *Gammarus limnaeus* (Smith) taken from an Alaskan lake. (*Biological bulletin*, Dec. 1954. v. 107, no. 3, p. 397-410, 5 fig., 2 tables) 30 refs.

Seasonal changes of metabolic rate in this crustacean accompanied changes in available oxygen, with decreased O_2 consumption in the winter. Lethal temperature changed from 26° C. in the winter to 30°-32° C. in the summer. Rate of heartbeat varied only slightly with the seasons. The material for this study was taken from Goose Lake, near Anchorage.

35734. KRYLOV, V. M. Iz opyta kraevedcheskoj raboty na Kralnem severe. (Sovetskoe kraevedenie, Dec. 1934. no. 12, p. 36-37) Text in Russian. *Title tr.*: From the experience of regional work in the far North.

Contains an account of difficulties encountered by the Soviet authorities in introducing their new order in the Koryakskiy natsional'nyy okrug. The Koryaks living 400 km. from the mouth of the Penzhina River, on the mountain range of Pal-pal, the so-called "Pal-famki," were found to be strongly influenced by Chukchis. A statistical survey, showing 310 nomadic Koryaks in 25 encampments, owning 12,000 head of reindeer, was made there with great difficulty in 1933. Soviet power only reached the region that year, and the natives persistently evaded disclosing the numbers of their people and reindeer. Their confidence was won however by a physician and their passive resistance thus broken. A reindeer state farm, or sovkhov, was established in 1934, expropriating six large owners or kulaks, and a former hired man was made its head. A school was also established.

35735. KRYNINE, DIMITRI PAVLOVITCH, 1877- . Discussion of "The suction force in soils upon freezing." (American Society of Civil Engineers. Proceedings, Dec. 1954. v. 80, separate no. 572, p. 45-46) 6 refs.

"The proposal by Jumikis [q. v.] that suction force be considered a soil property is rejected. The term force should not be applied to such phenomena as upward moisture flows which are basically controlled by energy interchanges. The concept that the real cause of the capillary movement is the action of the free energy of the unsaturated soil should be extended also to the water movement upon freezing."—SIPRE.

35736. KRYPTON, CONSTANTINE, pseud. Soviet policy in the northern national regions after World War II. (American Slavic and East European review, Oct. 1954. v. 13, p. 338-55) approx. 50 refs.

Contains discussion of problems faced by the Soviet Government in the attempted "Sovietization" of the national minorities (native peoples) of Komi and Yakut A. S. S. R. Problems of "Soviet reconstruction," of education and economy prior to 1940, revolts by the native peoples, and feelings of these people toward the war with Germany are discussed. After the war, collectivization had to be started anew. Northern kolkhozes, attempts to settle the nomads in homes, and recent developments in education of the national minorities are described.

35738. KUDRIĀVTSEV-SKAIF, S. Fedor Petrovich Litke. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 250-66, illus., port, 2 text maps) Text in Russian.

Contains a biography of F. P. Litke, an admiral, geographer, writer, president of the Academy of Sciences (1864-82) and a prominent arctic explorer. He took part in the round-the-world voyage of V. M. Golovnin on the *Kamchatka* in 1817-19;

and he explored Novaya Zemlya during four trips on the brig *Novaya Zemla* in the years 1821-1824, describing and surveying the western and the southern coast. He made his second circumnavigation of the globe in 1826-29 on the sloop *Sentâvin*, visiting Kamchatka and Alaska. His description of the eastern coast of Kamchatka and the northern coast of Bering Sea are major contributions to the study of this region. Litke's works are listed as No. 10211-10215 of *Arctic Bibliography*. **Copy seen:** DLC; MH.

Contains summary of John L. Jenness' theory that forces operating subsequent to Pleistocene glaciation are contributing significantly to the production of existing landforms in northwestern Canada. Water (rather than the Pleistocene ice), wind, weathering, solifluction, and effects induced by permafrost are cited as the most effective present-day forces.

Contains a sketch of the present-day life of the Aleuts on Bering and Mednyy Islands (334 individuals in 1927), descendants of those transferred from Attu and Atkhi (Atka) after 1805 by the Russian-American Co. Their anthropological type, largely mixed with other races, loose morals, alcoholism (they brew an intoxicant, *ziûda*, from sugar), their poor health, high mortality and lack of strength in the children, the disappearance of their indigenous culture, etc., are outlined. Psychological characteristics of the people are given. Their dwellings, clothing, utensils, etc., are of European style. Details are supplied on clothing, language (native terms and loan words), and folklore (very poor, the native musical instrument *chatiak* and folk dancing having disappeared since 1890). The people live chiefly from sealing and hunting; they keep a few domestic animals, but the growing of potatoes has been abandoned since 1910. Relations between members of the family (patriarchal order), religiosity, new administrative and pay system for workers, the activities of two schools, and needed reforms are reported.

The wildlife resources of the islands, past and present, are reviewed. The diminution in numbers of fur seals, polar foxes, and beavers because of reckless killing is stressed (statistics given). Fur

farming has been developed by the Russians since 1909-1910, following the example of the Canadians. A general description of the islands is given; their present (1927) economic organization, statistics of the fur trade for 1917-1926, and increase since 1923 in the farming of fur seals, beavers, and polar foxes are outlined.

Contains a review of the theories and opinions of various Russian and foreign naturalists (M. Bogdanov, M. Menzbir, N. Sokolov, Nehring and Woldrich) on the succession of faunas in European Russia in connection with geological and climatic changes. The influence of glaciation on faunal history and on migration of certain animals is noted. The changes in the vegetation of the area are also briefly reviewed.

Text in Russian. **Title tr.:** Injurious insects and means of controlling them. Second edition revised and enlarged.

A standard (for its time) monograph on insects injurious to crops, vegetables, trees and animals in Russian. Over 270 such insects are treated in taxonomic order with brief description of morphology, habits and occurrence, also control measures. Although the bulk of the work concerns insects of the southern and central regions, a few species occurring in the North are included, e. g. *Bryodemata tuberculata* Fabr., *Podisma pedestris* L., several bark borers (Ipidae), sawflies (*Lophyrus pini* L.), etc. Indexes are appended of Latin and Russian names (p. 769-78) and of remedies and insecticides (p. 779-80). An atlas of insects proposed in the preface has not been seen.

35746. KULAGINA, L. I. Ostrov Bering. (Vsesoiuznoe geograficheskoe obshchestvo. Priamurskii otdel. Obshchestvo izucheniiâ Amurskogo kraia, Vladivostok. Zapiski, 1928. t. 18, p.

97-104) Text in Russian. *Title tr.*: Bering Island.

Contains a sketch of its discovery, geography, climate and vegetation, the abundance of fur-bearing animals, etc. Its first population, the Aleuts, were transplanted there in 1826; others, including Russians, Zyryans, and Asiatic Eskimos, came in 1840. The poor health situation among the present-day mixed population, due mainly to alcoholism and loose morals, is stressed: 75 percent suffering from tuberculosis. Notes are given on character of the natives, their food, dwellings, clothing, implements, musical instruments and songs, love of drawing, etc. Attempts of the Soviet administration to improve the living conditions and educate the natives make slow progress. *Copy seen:* DLC.

The fisheries of Maritime (Far East) Province received recently a large number (27?) of medium-size fishing trawlers (srednii rybolovnyi trawler, SRT) equipped with drift nets for catching bottom fish, while experience in the Okhotsk Sea had shown the purse net to be far more efficient for pelagic fishing (herring and mackerel). V. I. Poturaev's modification of the superstructure of a vessel for purse netting is described in detail.

35748. KULLERUD, GUNNAR, and H. NEUMANN. The temperature of granitization in the Rendalsvik area, northern Norway. (Norsk geologisk tidsskrift, 1953. Bind 32, h. 2-4, p. 148-55, 2 text maps, diagr., cross-section, graph) ref.

The Holandsfjord-Tjongsfjord peninsula on which Reindalsvik is situated (66°42' N. 13°39' E.) is made up of granite, gneiss, and metamorphosed sediments in amphibolite facies. Field evidence suggests replacement *in situ* of pre-existing sediments by granite. The major events in geologic history of the region were: deposition of sediments in the Caledonian geosyncline; folding (and perhaps thrusting); and granitization, which affected all the sediments. Methods of determining

temperature of granitization are described. If the average pressure during granitization in this region be estimated at 2000 atm. \pm 1000 atm., the temperature of granitization was 440° C. \pm 25° C. Experimental evidence shows that granite magma cannot exist below 670° C.; therefore the granite of this area is non-igneous, in agreement with the field evidence. *Copy seen:* DGS.

Contains description of specimens collected by J. C. Troelsen, geologist of the Dansk Pearyland-ekspedition, 1947-1950, from Herlufsholm Strand (approx. 82°40' N. 20° W.) on the easternmost point of Peary Land, North Greenland. A section through the Triassic strata which yielded the fossils is described, the northernmost Triassic exposure known. Detailed descriptions are given of five species with comparisons and notes on occurrence, including *Pearylandites troelseni* n. gen., n. sp., and *Groenlandites nielseni* n. gen., n. sp.
